Legal information

Warning notice system

This Manual contains information which you must observe to ensure your own personal safety as well as to avoid material damage. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to equipment damage have no safety alert symbol. Depending on the hazard level, warnings are indicated in a descending order as follows:

⚠ DANGER
indicates that death or serious injury **will** result if proper precautions are not taken.

⚠ WARNING
indicates that death or serious injury **could** result if proper precautions are not taken.

⚠ CAUTION
indicates that minor personal injury can result if proper precautions are not taken.

NOTICE
indicates that property damage can result if proper precautions are not taken.

If more than one level of danger is simultaneously applicable, the warning notice for the highest level is used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified personnel

The product/system described in this documentation may only be operated by **personnel qualified** for the specific task in accordance with the relevant documentation for the specific task, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper Use of Siemens Products

Note the following:

⚠ WARNING
Siemens products are only permitted to be used for the applications listed in the catalog and in the associated technical documentation. If third-party products and components are used, then they must be recommended or approved by Siemens. These products can only function correctly and safely if they are transported, stored, set up, mounted, installed, commissioned, operated and maintained correctly. The permissible ambient conditions must be adhered to. Notes in the associated documentation must be observed.

Trademarks

All names identified with ® are registered trademarks of Siemens AG. Any other names used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of liability

We have checked the contents of this publication for consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. The information given in this document is reviewed at regular intervals and any corrections that might be necessary are made in the subsequent editions.

Preface

SINAMICS documentation

The SINAMICS documentation is structured according to the following categories:

- General documentation/catalogs
- Manufacturer/service documentation

Additional information

Information on the following topics is available under the link:

- Ordering documentation/overview of documentation
- Additional links to download documents
- Using documentation online (find and search in manuals/information).

http://www.siemens.com/motioncontrol/docu

My Documentation Manager

Information on how to produce individual contents for your own machine documentation based on Siemens contents is available under the link:

http://www.siemens.com/mdm

Training

Information about SITRAIN (Siemens Training on products, systems and solutions for automation) is available under the following link:

http://www.siemens.com/sitrain

FAQs

You can find Frequently Asked Questions in the Service&Support pages under Product Support:

http://support.automation.siemens.com

SINAMICS

You can find information on SINAMICS at:

http://www.siemens.com/sinamics

Usage phases and their tools/documents (as an example)

Table V-1 Usage phases and the available tools/documents

Usage phase	Tools/documents
Orientation	SINAMICS G Sales Documentation
Planning/configuration	SIZER Engineering Tool Configuration Manuals, Motors
Deciding/ordering	SINAMICS G Catalogs
Installation/assembly	• SINAMICS G150 Operating Instructions • SINAMICS G130 Operating Instructions
Commissioning	• STARTER Commissioning Tool • SINAMICS G150 Operating Instructions • SINAMICS G130 Operating Instructions
Usage/operation	• SINAMICS G150 Operating Instructions • SINAMICS G130 Operating Instructions
Maintenance/servicing	• SINAMICS G150 Operating Instructions • SINAMICS G130 Operating Instructions

Target group

This documentation addresses machine manufacturers, commissioning engineers, and service personnel who use SINAMICS.

Benefits

This documentation contains the comprehensive information about parameters, function diagrams and faults and alarms required to commission and service the system.

This manual should be used in addition to the other manuals and tools provided for the product.

Standard scope

The scope of the functionality described in this document can differ from the scope of the functionality of the drive that is actually supplied.

- Other functions not described in this documentation might be able to be executed in the drive system. However, no claim can be made regarding the availability of these functions when the equipment is first supplied or in the event of servicing.
- Functions that are not available in a particular product version of the drive system may be described in the documentation. The functionalities of the supplied drive system should only be taken from the ordering documentation.
- Supplements or changes made by the machine manufacturer must be documented by the machine manufacturer.

For reasons of clarity, this documentation does not contain all of the detailed information on all of the product types, This documentation cannot take into consideration every conceivable type of installation, operation and service/maintenance.

Search guides

The following guides are provided to help you locate information in this manual:

1. Table of contents
   – Table of contents for the complete manual (Page 9)
   – Table of contents for function diagrams (Page 1027)
2. List of abbreviations (Page 1813)
3. References (Page 1822)
4. Index (Page 1829)

Technical Support

Country-specific telephone numbers for technical support are provided on the Internet at:

http://www.siemens.com/automation/service&support

Table of contents

Fundamental safety instructions 1

Content

1.1 General safety instructions

WARNING

Risk of death if the safety instructions and remaining risks are not carefully observed

If the safety instructions and residual risks are not observed in the associated hardware documentation, accidents involving severe injuries or death can occur.

- Observe the safety instructions given in the hardware documentation.
- Consider the residual risks for the risk evaluation.

WARNING

Danger to life or malfunctions of the machine as a result of incorrect or changed parameterization

As a result of incorrect or changed parameterization, machines can malfunction, which in turn can lead to injuries or death.

- Protect the parameterization (parameter assignments) against unauthorized access.
- Respond to possible malfunctions by applying suitable measures (e.g. EMERGENCY-STOP or EMERGENCY-OFF).

1.2 Industrial security

Note

Industrial security

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, solutions, machines, devices, and/or networks. They are important components of a holistic industrial security concept. With this in mind, Siemens' products and solutions undergo continuous development. Siemens recommends strongly that you regularly check for product updates.

To ensure that Siemens products and solutions are operated securely, suitable preventive measures (e.g. cell protection concept) and each component must be integrated into a state-of-the-art holistic industrial security concept. Third-party products that may be in use should also be considered. You will find more information about industrial security at:

http://www.siemens.com/industrialsecurity

To receive information about product updates on a regular basis, register for our product newsletter. You will find more information at:

http://support.automation.siemens.com

WARNING

Danger as a result of unsafe operating states resulting from software manipulation

Software manipulation (e.g. by viruses, Trojan horses, malware, worms) can cause unsafe operating states to develop in your installation which can result in death, severe injuries and/or material damage.

- Keep the software up to date.

  Information and newsletters can be found at:

  http://support.automation.siemens.com
- Incorporate the automation and drive components into a holistic, state-of-the-art industrial security concept for the installation or machine.

  For more information, visit:

  http://www.siemens.com/industrialsecurity
- Make sure that you include all installed products into the holistic industrial security concept.

Parameters 2

Content

2.1 Overview of parameters

2.1.1 Explanation of the parameter list

Basic structure of the parameter descriptions

The data in the following example has been chosen at random. The table below contains all the information that can be included in a parameter description. Some of the information is optional.

The "List of parameters" (Page 33) has the following structure:

- - - - - - - - - - - - Start of example -

pxxxx[0...n]	**BICO: Full parameter name / abbreviated name**		
Drive object (function module)	**Can be changed:** C1(x), C2(x), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 2
	Data type: Unsigned32 / Integer16	**Dyn. index:** CDS, p0170	**Func. diagram:** 8070
	P-Group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: FEM	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Nm]	10.00 [Nm]	0.00 [Nm]

Description: Text

Value:
0: Name and meaning of value 0
1: Name and meaning of value 1
2: Name and meaning of value 2
etc.

Recommendation: Text

Index:
[0] = Name and meaning of index 0
[1] = Name and meaning of index 1
[2] = Name and meaning of index 2
etc.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Name and meaning of bit 0	Yes	no	8060
01	Name and meaning of bit 1	Yes	no	
02	Name and meaning of bit 2	Yes	no	8065
	etc.			

Dependency: Text
Refer to: pxxxx, rxxxx
Refer to: Fxxxxx, Axxxxx

Danger: ⚠ **Warning:** ⚠ **Caution:** ⚠ Safety notices with a warning triangle

Notice: Safety notice without a warning triangle

Note: Information that might be useful.

- - - - - - - - - - - - End of example -

The individual pieces of information are described in detail below.

pxxxx[0...n] **Parameter number**

The parameter number is made up of a "p" or "r", followed by the parameter number and the index (optional).

Examples of the representation in the parameter list:

- p... Adjustable parameters (read and write parameters)
- r... Display parameters (read only)
- p0918 Adjustable parameter 918
- p0099[0...3] Adjustable parameter 99, indices 0 to 3
- p1001[0...n] Adjustable parameter 1001, indices 0 to n (n = configurable)
- r0944 Display parameter 944
- r2129.0...15 Display parameter 2129 with bit field from bit 0 (smallest bit) to bit 15 (largest bit)

Other examples of the notation in the documentation:

- p1070[1] Adjustable parameter 1070, index 1
- p2098[1].3 Adjustable parameter 2098, index 1 bit 3
- r0945[2](3) Display parameter 945, index 2 of drive object 3
- p0795.4 Adjustable parameter 795, bit 4

The following applies to adjustable parameters:

The parameter value as delivered is specified under "Factory setting" with the relevant unit in square brackets. The value can be adjusted within the range defined by "Min" and "Max".

The term "linked parameterization" is used in cases where changes to adjustable parameters affect the settings of other parameters.

Linked parameterization can occur, for example, as a result of the following actions or parameters:

- Executing macros

  p0015, p0700, p1000, p1500
- Setting the PROFIBUS telegram (BICO interconnection)

  p0922
- Set component lists

  p0230, p0300, p0301, p0400
- Automatic calculation and pre-assignment

  p0112, p0340, p0578, p3900
- Restoring the factory settings

  p0970

The following applies to display parameters:

The fields "Min", "Max" and "Factory setting" are specified with a dash "-" and the relevant unit in square brackets.

Note

The parameter list can contain parameters that are not visible in the expert lists of the particular commissioning software (e.g. parameters for trace functions).

BICO: Full parameter name / abbreviated name

The following abbreviations can appear in front of the parameter name:

- BI: Binector Input
  This parameter is used for selecting the source of a digital signal.
- BO: Binector output
  This parameter is available as a digital signal for interconnection with other parameters.
- CI: Connector Input
  This parameter is used for selecting the source of an "analog" signal.
- CO: Connector output
  This parameter is available as an "analog" signal for interconnection with other parameters.
- CO/BO: Connector/Binector Output
  This parameter is available as an "analog" and digital signal for interconnection with other parameters.

Note

A connector input (CI) cannot be just interconnected with any connector output (CO, signal source).
When interconnecting a connector input using the commissioning software, only the corresponding possible signal sources are listed.

Drive object (function module)

A drive object (DO) is an independent, "self-contained" functional unit that has its own parameters and, in some cases, faults and alarms.

When carrying out commissioning using the commissioning software, you can select/deselect additional functions and their parameters by activating/deactivating function modules accordingly.

The parameter list specifies the associated drive object and function module for each individual parameter.

Examples:

- p1070 CI: Main setpoint
  VECTOR
  The parameter is only available with the VECTOR drive object, regardless of which function modules have been activated.
- p1055 BI: Jog bit 0
  VECTOR
  The parameter is available with the VECTOR drive object, regardless of which function modules have been activated (i.e. it is available with every activated function module belonging to the drive object).

A parameter can belong to a single, multiple, or all drive objects.

The following information relating to "Drive object" and "Function module" can be displayed under the parameter number:

Table 2-1 Data in the "Drive object (function module)" field

Drive object (function module)	Type	Meaning
All objects	-	This parameter is used by all drive objects.
B_INF	30	Basic Infeed closed loop control Unregulated line infeed unit (without regenerative feedback) for rectifying the line voltage of the DC link.
B_INF (parallel)	-	Basic Infeed with "Parallel connection" function module (r0108.15).
B_INF (Brk Mod Ext)	-	Basic Infeed with "Braking Module external" function module (r0108.26).
B_INF (Cooling unit)	-	Basic Infeed with "Cooling unit" function module (r0108.28)
B_INF (PROFINET)	-	Basic Infeed with "PROFINET" function module (r0108.31).
CU_G130_DP		Control Unit SINAMICS G130 with PROFIBUS interface.
CU_G130_DP (CAN)	-	Control Unit SINAMICS G130 with PROFIBUS interface and function module “CAN“ (p0108.29).
CU_G130_DP (COMM BOARD)		Control Unit SINAMICS G130 with PROFIBUS interface and "COMM board" function module (p0108.30).
CU_G130_DP (PROFINET)	-	Control Unit SINAMICS G130 with PROFIBUS interface and function module “PROFINET“ (p0108.31).
CU_G130_PN		Control Unit SINAMICS G130 with PROFINET interface.
CU_G130_PN (CAN)	-	Control Unit SINAMICS G130 with PROFINET interface and function module “CAN“ (p0108.29).
CU_G130_PN (COMM BOARD)		Control Unit SINAMICS G130 with PROFINET interface and "COMM board" function module (p0108.30).
CU_G130_PN (PROFINET)		Control Unit SINAMICS G130 with PROFINET interface and function module “PROFINET“ (p0108.31).
CU_G150_DP		Control Unit SINAMICS G150 with PROFIBUS interface.
CU_G150_DP (CAN)	-	Control Unit SINAMICS G150 with PROFIBUS interface and function module “CAN“ (p0108.29).
CU_G150_DP (COMM BOARD)		Control Unit SINAMICS G150 with PROFIBUS interface and "COMM board" function module (p0108.30).
CU_G150_DP (PROFINET)	-	Control Unit SINAMICS G150 with PROFIBUS interface and function module “PROFINET“ (p0108.31).
CU_G150_PN		Control Unit SINAMICS G150 with PROFINET interface.
CU_G150_PN (CAN)	-	Control Unit SINAMICS G150 with PROFINET interface and function module “CAN“ (p0108.29).
CU_G150_PN (COMM BOARD)		Control Unit SINAMICS G150 with PROFINET interface and "COMM board" function module (p0108.30).
CU_G150_PN (PROFINET)		Control Unit SINAMICS G150 with PROFINET interface and function module “PROFINET“ (p0108.31).
ENC	300	Object for a DRIVE-CLiQ encoder.

Table 2-1 Data in the "Drive object (function module)" field, continued

Drive object (function module)	Type	Meaning
ENC (lin_encoder)	-	Object for a DRIVE-CLiQ encoder with "Linear encoder" function module (r0108.12).
HUB	150	DRIVE-CLiQ Hub Module.
TB30	100	Terminal Board 30.
TM150	208	Terminal Module 150.
TM31	200	Terminal Module 31.
TM54F_MA	205	Terminal Module 54F Master.
TM54F_SL	206	Terminal Module 54F Slave.
VECTOR_G	12	Vector drive for SINAMICS G130/G150.
VECTOR_G (n/M)	-	Vector drive for SINAMICS G130/G150 with "Speed/torque control" function module (r0108.2).
VECTOR_G (Safety red)	-	Vector drive for SINAMICS G130/G150 with "Safety rotary axis" function module (r0108.13).
VECTOR_G (ext. brake)	-	Vector drive for SINAMICS G130/G150 with "Extended brake control" function module (r0108.14).
VECTOR_G (parallel)	-	Vector drive for SINAMICS G130/G150 with "Parallel connection" function module (r0108.15).
VECTOR_G (Tech_ctrl)	-	Vector drive for SINAMICS G130/G150 with "Technology controller" function module (r0108.16).
VECTOR_G (ext. mess.)	-	Vector drive for SINAMICS G130/G150 with "Extended messages/monitoring functions" function module (r0108.17).
VECTOR_G (Cooling unit)	-	Vector drive for SINAMICS G130/G150 with "Cooling unit" function module (r0108.28).
VECTOR_G (CAN)	-	Vector drive for SINAMICS G130/G150 with "CAN" function module (r0108.29).
VECTOR_G (PROFINET)	-	Vector drive for SINAMICS G130/G150 with "PROFINET" function module (r0108.31).

Note

The drive object type is used to identify the drive objects in the drive system (e.g. r0107, r0975[1]).

Can be changed

The "-" sign indicates that the parameter can be changed in any object state and that the change will be effective immediately.

The information "C1(x), C2(x), T, U" ((x): optional) means that the parameter can be changed only in the specified drive unit state and that the change will not take effect until the unit switches to another state. This can be a single state or multiple states.

The following states are available:

- C1(x) Device commissioning — C1: **C**ommissioning **1**

  Device is being commissioned (p0009 > 0).

  Pulses cannot be enabled.

  The parameter can only be changed for the following device commissioning settings (p0009 > 0):

  - C1: Can be changed for all settings p0009 > 0.
  - C1(x): Can be changed only when p0009 = x.

  A modified parameter value does not take effect until the device commissioning mode is exited with p0009 = 0.

- C2(x) Drive object commissioning — C2: **C**ommissioning **2**

  Drive commissioning is in progress (p0009 = 0 and p0010 > 0).

  Pulses cannot be enabled.

  The parameter can only be changed in the following drive commissioning settings (p0010 > 0):

  - C2: Can be changed for all settings p0010 > 0.
  - C2(x): Can only be changed for the settings p0010 = x.

  A modified parameter value does not take effect until drive commissioning mode is exited with p0010 = 0.

- U Operation — U: R**u**n

  Pulses are enabled.

- T Ready — T: Ready **t**o run

  The pulses are not enabled and the state "C1(x)" or "C2(x)" is not active.

Note

Parameter p0009 is CU-specific (belongs to the Control Unit).

Parameter p0010 is drive-specific (belongs to each drive object).

The operating state of individual drive objects is displayed in r0002.

Calculated

Specifies whether the parameter is influenced by automatic calculations.

The calculation attribute defines which activities influence the parameter.

The following attributes apply:

- CALC_MOD_ALL
  - p0340 = 1
  - Project download with commissioning software and send from p0340 = 3
- CALC_MOD_CON
  - p0340 = 1, 3, 4
- CALC_MOD_EQU
  - p0340 = 1, 2
- CALC_MOD_LIM_REF
  - p0340 = 1, 3, 5
  - p0578 = 1
- CALC_MOD_REG
  - p0340 = 1, 3

Note

For p3900 > 0, p0340 = 1 is also called automatically.

After p1910 = 1, p0340 = 3 is also called automatically.

Access level

Specifies the minimum access level required to be able to display and change the relevant parameter. The required access level can be set using p0003.

The system uses the following access levels:

- 1: Standard
- 2: Extended
- 3: Expert
- 4: Service

  Parameters with this access level are password protected.

Note

Parameter p0003 is CU-specific (belongs to the Control Unit).

A higher access level will also include the functions of the lower levels.

Data type

The information on the data type can consist of the following two items (separated by a slash):

- First item

  Data type of the parameter.
- Second item (for binector or connector input only)

  Data type of the signal source to be interconnected (binector/connector output).

Parameters can have the following data types:

- Integer8 I8 8-bit integer number
- Integer16 I16 16-bit integer number
- Integer32 I32 32-bit integer number
- Unsigned8 U8 8 bits without sign
- Unsigned16 U16 16 bits without sign
- Unsigned32 U32 32 bits without sign
- FloatingPoint32 Float 32-bit floating point number

Depending on the data type of the BICO input parameter (signal sink) and BICO output parameter (signal source), the following combinations are possible when creating BICO interconnections:

Table 2-2 Possible combinations of BICO interconnections

	BICO input parameter			
	CI parameter			BI parameter
BICO output parameter	**Unsigned32 / Integer16**	**Unsigned32 / Integer32**	**Unsigned32 / FloatingPoint32**	**Unsigned32 / Binary**
CO: Unsigned8	x	x	–	–
CO: Unsigned16	x	x	–	–
CO: Integer16	x	x	r2050, r8850	–
CO: Unsigned32	x	x	–	–
CO: Integer32	x	x	r2060, r8860	–
CO: FloatingPoint32	x	x	x	–
BO: Unsigned8	–	–	–	x
BO: Unsigned16	–	–	–	x
BO: Integer16	–	–	–	x
BO: Unsigned32	–	–	–	x
BO: Integer32	–	–	–	x
BO: FloatingPoint32	–	–	–	–
Legend: x : BICO interconnection permitted –: BICO interconnection not permitted rxxxx: BICO interconnection is only permitted for the specified CO parameters				

Dynamic index

For parameters with a dynamic index [0...n], the following information is specified here:

- Data set (if available).
- Parameter for the number of indices (n = number - 1).

The following information can be contained in this field:

- "CDS, p0170" (Command Data Set, CDS count)

  Example:

  p1070[0] → main setpoint [command data set 0]

  p1070[1] → main setpoint [command data set 1], etc.
- "DDS, p0180" (Drive Data Set, DDS count)
- "EDS, p0140" (Encoder Data Set, EDS count)
- "MDS, p0130" (Motor Data Set, MDS count)
- "PDS, p0120" (Power unit Data Set, PDS count)
- "p2615" (traversing blocks count)

Function diagram

The parameter is included in this function diagram. The structure of the parameter function and its relationship with other parameters is shown in the specified function diagram.

Example:

Function diagram: 3060.3	3060:	Function diagram number
	3:	Signal path (optional)

P-Group (only when accessing via BOP (Basic Operator Panel))

Specifies the functional group to which this parameter belongs. The required parameter group can be set via p0004.

Note

Parameter p0004 is CU-specific (belongs to the Control Unit).

Unit, unit group and unit selection

The standard unit of a parameter is specified in square brackets after the values for "Min", "Max", and "Factory setting".

For parameters where the unit can be switched over, the specifications for "Unit group" and "Unit selection" determine the group to which this parameter belongs and with which parameter the unit can be changed over.

Example:

Unit group: 7_1, unit selection: p0505

The parameter belongs to unit group 7_1 and the unit can be changed over using p0505.

Note

Detailed information on changing over units can be found in the following references:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions

References: /BA3/ SINAMICS S150 Operating Instructions

All the potential unit groups and possible unit selections are listed below.

Table 2-3 Unit groups (p0100)

Unit group	Unit selection for p0100 =		Reference variable for %
	0	1	
7_4	Nm	lbf ft	-
8_4	N	lbf	-
14_2	W	HP	-
14_6	kW	HP	-
14_13	W/A	HP/A	-
14_14	W min/1000	HP min/1000	-
14_15	W/A^2	HP/A^2	-
14_16	W $min^2/1000^2$	HP $min^2/1000^2$	-

9_1	The values that can be set and the technological units are shown in p0595.		

Parameter values

Min — Minimum value of the parameter [unit]

Max — Maximum value of the parameter [unit]

Factory setting — Value when delivered [unit]

In the case of a binector/connector input, the signal source of the default BICO interconnection is specified. A non-indexed connector output is assigned the index [0].

A different value may be displayed for certain parameters (e.g. p1800) at the initial commissioning stage or when establishing the factory settings.
Reason:
The setting of these parameters is determined by the operating environment of the Control Unit (e.g. depending on converter type, macro, power unit).

Note

For SINAMICS G130/G150, the macros and their settings are provided in the following documentation:

References: /BAx/ x = 1, 2
SINAMICS G150/G130 Operating Instructions

Not for motor type

Specifies for which motor type this parameter has no significance.

ASM: Asynchronous Motor

FEM: Separately excited synchronous motor

PEM: Permanent-magnet synchronous motor

REL: Reluctance motor/SIEMOSYN motor

Scaling

Specification of the reference variable with which a signal value is automatically converted for a BICO interconnection.

The following reference variables are available:

- p2000 ... p2007: Reference speed, reference voltage, etc.
- PERCENT: 1.0 = 100 %
- 4000H: 4000 hex = 100 %

Expert list

Specifies whether this parameter is available in the expert list of the specified drive objects in the commissioning software.

1: Parameter exists in the expert list.

0: Parameter does not exist in the expert list.

NOTICE
Users assume full responsibility for using parameters marked "Expert list: 0" (parameter does not exist in the expert list). These parameters and their functionalities have not been tested and no further user documentation is available for them (e.g. description of functions). Moreover, no support is provided for these parameters by "Technical Support" (hotline).

Description

Explanation of the function of a parameter

Values

Lists the possible values of a parameter.

Recommendation

Information about recommended settings.

Index

The name and meaning of each individual index is specified for indexed parameters.

The following applies to the values (Min, Max, Factory setting) for indexed adjustable parameters:

- Min, Max:

  The adjustment range and unit apply to all indices.
- Factory setting:

  When all indices have the same factory setting, index 0 is specified with the unit to represent all indices.

  When the indices have different factory settings, they are all listed individually with the unit.

Bit field

For parameters with bit fields, the following information is provided about each bit:

- Bit number and signal name
- Meaning for signal states 0 and 1
- Function diagram (optional)

  The signal is shown in this function diagram.

Dependency

Conditions that must be fulfilled in conjunction with this parameter. Also includes special effects that can occur between this parameter and others.

Where necessary, "Refer to:" indicates the following information:

- List of other relevant parameters to be considered.
- List of faults and alarms to be considered.

Safety guidelines

Important information that must be observed to avoid the risk of physical injury or material damage.

Information that must be observed to avoid any problems.

Information that the user may find useful.

Danger	The description of this safety notice can be found at the beginning of this manual, see "Legal information" (Page 4).
Warning	The description of this safety notice can be found at the beginning of this manual, see "Legal information" (Page 4).

Caution ⚠ The description of this safety notice can be found at the beginning of this manual, see "Legal information" (Page 4).

Notice The description of this safety notice can be found at the beginning of this manual, see "Legal information" (Page 4).

Note Information that the user may find useful.

2.1.2 Number ranges of parameters

Note

The following number ranges represent an overview for all the parameters available for the SINAMICS drive family.

The parameters for the product described in this List Manual are described in detail in "List of parameters" (Page 33).

Parameters are grouped into the following number ranges:

Table 2-7 Number ranges for SINAMICS

Range		Description
From	To	
0000	0099	Display and operation
0100	0199	Commissioning
0200	0299	Power section
0300	0399	Motor
0400	0499	Encoder
0500	0599	Technology and units, motor-specific data, probes
0600	0699	Thermal monitoring, maximum current, operating hours, motor data, central probe
0700	0799	Control Unit terminals, measuring sockets
0800	0839	CDS, DDS data sets, motor changeover
0840	0879	Sequence control (e.g. signal source for ON/OFF1)
0880	0899	ESR, parking, control and status words
0900	0999	PROFIBUS/PROFIdrive
1000	1199	Setpoint channel (e.g. ramp-function generator)
1200	1299	Functions (e.g. motor holding brake)
1300	1399	U/f control
1400	1799	Closed-loop control

Table 2-7 Number ranges for SINAMICS, continued

Range		Description
From	To	
1800	1899	Gating unit
1900	1999	Power unit and motor identification
2000	2009	Reference values
2010	2099	Communication (fieldbus)
2100	2139	Faults and alarms
2140	2199	Signals and monitoring
2200	2359	Technology controller
2360	2399	Staging, hibernation
2500	2699	Position control (LR) and basic positioning (EPOS)
2700	2719	Reference values, display
2720	2729	Load gearbox
2800	2819	Logic operations
2900	2930	Fixed values (e. g. percentage, torque)
3000	3099	Motor identification results
3100	3109	Real-time clock (RTC)
3110	3199	Faults and alarms
3200	3299	Signals and monitoring
3400	3659	Infeed closed-loop control
3660	3699	Voltage Sensing Module (VSM), Braking Module internal
3700	3779	Advanced Positioning Control (APC)
3780	3819	Synchronization
3820	3849	Friction characteristic
3850	3899	Functions (e. g. long stator)
3900	3999	Management
4000	4599	Terminal Board, Terminal Module (e. g. TB30, TM31)
4600	4699	Sensor Module
4700	4799	Trace
4800	4849	Function generator
4950	4999	OA application
5000	5169	Spindle diagnostics
5200	5230	Current setpoint filter 5 ... 10 (r0108.21)
5400	5499	System droop control (e. g. shaft generator)
5500	5599	Dynamic grid support (solar)
5600	5614	PROFIenergy
5900	6999	SINAMICS GM/SM/GL/SL

Table 2-7 Number ranges for SINAMICS, continued

Range		Description
From	To	
7000	7499	Parallel connection of power units
7500	7599	SINAMICS SM120
7700	7729	External messages
7770	7789	NVRAM, system parameters
7800	7839	EEPROM read/write parameters
7840	8399	Internal system parameters
8400	8449	Real-time clock (RTC)
8500	8599	Data and macro management
8600	8799	CAN bus
8800	8899	Communication Board Ethernet (CBE), PROFIdrive
8900	8999	Industrial Ethernet, PROFINET, CBE20
9000	9299	topology
9300	9399	Safety Integrated
9400	9499	Parameter consistency and storage
9500	9899	Safety Integrated
9900	9949	topology
9950	9999	Diagnostics, internal
10000	10199	Safety Integrated
11000	11299	Free technology controller 0, 1, 2
20000	20999	Free function blocks (FBLOCKS)
21000	25999	Drive Control Chart (DCC)
50000	53999	SINAMICS DC MASTER (closed-loop DC current control)
61000	61001	PROFINET

2.2 List of parameters

Product: SINAMICS G130/G150, Version: 4702900, Language: eng
Objects: B_INF, CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G

r0002 Infeed operating display / INF op_display

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	250	-

Description: Operating display for the infeed.

Value:
0: Operation - everything enabled
31: Rdy for sw on - pre-chrg running (p0857)
32: Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
35: Switching on inhibited - carry out first commissioning (p0010)
41: Switching on inhibited - set "ON/OFF1" = "0" (p0840)
42: Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845)
44: Switching on inhibited - connect 24 V to terminal EP (hardware)
45: Switching on inhibited - remove fault cause, acknowledge fault
46: Switching on inhibited - exit comm mode (p0009, p0010)
60: Infeed de-activated/not operational
70: Initialization
200: Wait for booting/partial booting
250: Device signals a topology error

Dependency: Refer to: r0046

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

Note: OC: Operating condition
COMM: Commissioning

r0002 Control Unit operating display / CU op_display

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	117	-

Description: Operating display for the Control Unit (CU).

Value:
0: Operation
10: Ready
20: Wait for run-up
25: Wait for automatic FW update of DRIVE-CLiQ components
31: Commissioning software download active
33: Remove/acknowledge topology error
34: Exit commissioning mode
35: Carry out first commissioning
70: Initialization
80: Reset active
99: Internal software error
101: Specify topology
111: Insert drive object
112: Delete drive object
113: Change drive object number
114: Change component number
115: Run parameter download
117: Delete component

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002	**Encoder DO operating display / Enc DO op_display**		
ENC	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	250	-

Description: Operating display for encoder drive object.

Value:
0: Encoder in cyclic operation
35: Carry out first commissioning (p0010)
45: Remove fault cause, acknowledge fault
46: Exit commissioning mode (p0009, p0010)
60: Encoder de-activated
200: Wait for booting/partial booting
250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002	**DRIVE-CLiQ Hub Module operating display / Hub op_display**		
HUB	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	250	-

Description: Operating display for the DRIVE-CLiQ Hub Module.

Value:
0: Module in cyclic operation
40: Module not in cyclic operation
50: Alarm
60: Fault
70: Initialization
120: Module de-activated
200: Wait for booting/partial booting
250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002	**TB30 operating display / TB30 op_display**		
TB30	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	250	-

Description: Operating display for Terminal Board 30 (TB30).

Value:
0: Module in cyclic operation
40: Module not in cyclic operation
60: Fault
70: Initialization
80: Reset active
120: Module de-activated
200: Wait for run-up
250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002	TM150 operating display / TM150 op_display		
TM150	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	250	-

Description: Operating display for Terminal Module 150 (TM150)

Value:
0: Module in cyclic operation
40: Module not in cyclic operation
50: Alarm
60: Fault
70: Initialization
120: Module de-activated
200: Wait for booting/partial booting
250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002	TM31 operating display / TM31 op_display		
TM31	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	250	-

Description: Operating display for Terminal Module 31 (TM31).

Value:
0: Module in cyclic operation
40: Module not in cyclic operation
50: Alarm
60: Fault
70: Initialization
120: Module de-activated
200: Wait for booting/partial booting
250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002	TM54F operating display / TM54F op_display		
TM54F_MA, TM54F_SL	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	250	-

Description: Operating display for Terminal Module 54F (TM54F).

Value:
0: Module in cyclic operation
40: Module not in cyclic operation
50: Alarm
60: Fault
70: Initialization
120: Module de-activated
200: Wait for booting/partial booting
250: Device signals a topology error

r0002 Drive operating display / Drv op_display

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	250	-

Description: Operating display for the drive.

Value:
0: Operation - everything enabled
10: Operation - set "enable setpoint" = "1" (p1142, p1152)
11: Operation - set "enable speed controller" = "1" (p0856)
12: Operation - RFG frozen, set "RFG start" = "1" (p1141)
13: Operation - set "enable RFG" = "1" (p1140)
14: Oper. - MotID, excit. running and/or brake opens, SS2, STOP C
15: Operation - open brake (p1215)
16: Operation - withdraw braking with OFF1 using "ON/OFF1" = "1"
17: Operation - braking with OFF3 can only be interrupted with OFF2
18: Operation - brake on fault, remove fault, acknowledge
19: Operation - armature short-circ./DC brake act. (p1230, p1231)
21: Ready for operation - set "Operation enable" = "1" (p0852)
22: Ready for operation - de-magnetizing running (p0347)
23: Ready for operation - set "Infeed operation" = "1" (p0864)
31: Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
35: Switching on inhibited - carry out first commissioning (p0010)
41: Switching on inhibited - set "ON/OFF1" = "0" (p0840)
42: Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845)
43: Switching on inhibited - set "OC/OFF3" = "1" (p0848, p0849)
44: Switching on inhibited - connect 24 V to terminal EP (hardware)
45: Switching on inhibited - rectify fault, acknowledge fault, STO
46: Switching on inhibited - exit comm mode (p0009, p0010)
60: Drive object de-activated/not operational
70: Initialization
200: Wait for booting/partial booting
250: Device signals a topology error

Dependency: Refer to: r0046

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

Note: OC: Operating condition

EP: Enable Pulses (pulse enable)

RFG: Ramp-function generator

COMM: Commissioning

MotID: Motor data identification

SS2: Safe Stop 2

STO: Safe Torque Off

p0003 BOP access level / BOP acc_level

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1, U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	4	1

Description: Sets the access level for reading and writing parameters via the Basic Operator Panel (BOP).

Value:
1: Standard
2: Extended
3: Expert
4: Service

Note: A higher set access level also includes the lower one.

Access level 1 (standard):

Parameters for simplest possible operations.

Access level 2 (extended):

Parameters to operate the basic functions of the drive unit.

Access level 3 (experts):

Expert know-how is required for these parameters (e.g. BICO parameterization).

Access level 4 (service):

For these parameters, it is necessary that authorized service personnel enter the appropriate password (p3950).

p0004 BOP display filter / BOP disp_filter

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	99	0

Description: Sets the display filter for parameters with the Basic Operator Panel (BOP).

Value:

0: All parameters
1: Displays, signals
2: Power unit
3: Motor
4: Encoder/pos enc
5: Technology/units
7: Digital inputs/outputs, commands, sequence control
8: Analog inputs/outputs
10: Setpoint channel/ramp-fct generator
12: Functions
13: U/f control
14: Control
15: Data sets
17: Basic positioner
18: Gating unit
19: Motor identification
20: Communication
21: Faults, alarms, monitoring functions
25: Cl-loop pos ctrl
28: Free function blocks
47: Trace and function generator
50: OA parameters
90: Topology
95: Safety Integrated
98: Command Data Sets (CDS)
99: Drive Data Sets (DDS)

Dependency: Refer to: p0003

Notice: The display filter via p0004 provides precise filtering and displays the corresponding parameters only when p0009 and p0010 = 0.

Note: The set access level via p0003 is also relevant for the display filter via p0004.

Examples (assumption: p0009 = p0010 = 0):

p0003 = 1, p0004 = 3

--> Only the parameters for the motor with access level 1 are displayed.

p0003 = 2, p0004 = 3

--> Only the parameters for the motor with access levels 1 and 2 are displayed.

p0005[0...1] BOP operating display selection / BOP op_disp sel

All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	[0] 2 [1] 0

Description: Sets the parameter number and parameter index for display for p0006 = 2, 4 for the Basic Operator Panel (BOP).

Examples for the SERVO drive object:

p0005[0] = 21, p0005[1] = 0: Actual speed smoothed (r0021)

p0005[0] = 25, p0005[1] = 0: Output voltage smoothed (r0025)

Index: [0] = Parameter number
[1] = Parameter index

Dependency: Refer to: p0006

Note: Procedure:

1.

The parameter number to be displayed should be set in index 0. Only the monitoring parameters (read-only parameters) can be set that actually exist for the actual drive object.

If the set parameter number is not indexed, or if there is an index in index 1 that lies outside the valid range of the set parameter, then index 1 is automatically set to 0.

2.

The index that belongs to the parameter set in index 0 should be set in index 1. The permissible changes in index 1 always depend on the parameter number set in index 0.

p0006 BOP operating display mode / BOP op_ disp mode

B_INF, VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	4	4

Description: Sets the mode of the operating display for the Basic Operator Panel (BOP) in the operating states "ready for operation" and "operation".

Value:
0: Operation --> r0021, otherwise r0020 <--> r0021
1: Operation --> r0021, otherwise r0020
2: Operation --> p0005, otherwise p0005 <--> r0020
3: Operation --> r0002, otherwise r0002 <--> r0020
4: p0005

Dependency: Refer to: p0005

Note: Mode 0 ... 3 can only be selected if also r0020, r0021 are available on the drive object.

Mode 4 is available for all drive objects.

p0006 BOP operating display mode / BOP op_ disp mode

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	4	4	4

Description: Sets the mode of the operating display for the Basic Operator Panel (BOP) in the operating states "ready for operation" and "operation".

Value: 4: p0005

Dependency: Refer to: p0005

Note: Mode 0 ... 3 can only be selected if also r0020, r0021 are available on the drive object.
Mode 4 is available for all drive objects.

p0007 BOP background lighting / BOP lighting

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [s]	2000 [s]	0 [s]

Description: Sets the delay time until the background lighting of the Basic Operator Panel (BOP) is switched off.
If no keys are actuated, then the background lighting automatically switches itself off after this time has expired.

Note: p0007 = 0: Background lighting is always switched on (factory setting).

p0008 BOP drive object after booting / BOP DO after boot

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	65535	1

Description: Sets the required drive object that is active at the Basic Operator Panel (BOP) after booting.

Note: The value from p0008 initializes the display on the Basic Operator Panel (BOP) at the top left after booting.
The drive object Control Unit is selected using the value 1.

p0009 Device commissioning parameter filter / Dev comm par_filt

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	10000	1

Description: Sets the device and basic drive commissioning.
By appropriately setting this parameter, those parameters are filtered that can be written into in the various commissioning steps.

Value:
0: Ready
1: Device configuration
2: Defining the drive type/function module
3: Drive base configuration
4: Data set base configuration
29: Device download
30: Parameter reset
50: OA application configuration
55: OA application installation
101: Topology input
111: Insert drive object
112: Delete drive object
113: Change drive object number
114: Change component number
115: Parameter download
117: Delete component
10000: Ready (asynchron)

Notice: For p0009 = 10000 the following applies:
After the value has been modified, no further parameter modifications can be made and the status is shown in r3996.
Modifications can be made again when r3996 = 0.

Note: The drives can only be powered up outside the device commissioning (the inverter enabled). In this case, p0009 must be 0 (Ready) and the individual drive objects must have already gone into operation (p0010).

p0009 = 1: Device configuration

At the first commissioning of the device, after booting, the device is in the "device configuration" state. To start the internal automatic first commissioning of the drive unit, p0009 should be set to 0 (Ready) after the ID for the actual topology (r0098) was transferred into the ID for the target topology (p0099). To do this, it is sufficient to set a single index value of p0099[x] the same as r0098[x]. Before the device has been completely commissioned, no other parameter can be changed. After the first commissioning was carried out, in this state, when required, other basic device configuration parameters can be adapted (e.g. the basic sampling time in p0110).

p0009 = 2: Defines the drive type / function module

In this state, the drive object types and/or the function modules can be changed or selected for the individual drive objects. To do this, the drive object type can be set using p0107[0...15] and the function can be set using p0108[0...15] (refer to p0101[0...15]).

p0009 = 3: Drive basic configuration

In this state, after the device has been commissioned for the first time, basic changes can be made for the individual drive objects (e.g. sampling times in p0111, p0112, p0115 and the number of data sets in p0120, p0130, p0140, p0170, p0180).

p0009 = 4: Data set basic configuration

In this state, after the device has been commissioned for the first time, for the individual drive objects changes can be made regarding the assignment of the components (p0121, p0131, p0141, p0151, p0161) to the individual data sets and the assignment of the power unit, motor and encoder to the drive data sets (p0185, ...).

p0009 = 29: Device download

If a download is made using the commissioning software, the device is automatically brought into this state. After the download has been completed, p0009 is automatically set to 0 (ready). It is not possible to manually set p0009 to this value.

p0009 = 30: Parameter reset

In order to bring the complete unit into the "first commissioning" state or to load the parameters saved using p0977, to start, p0009 must be set to this value. p0976 can then be changed to the required value.

p0009 = 50: OA application configuration

In this state, after the device has been commissioned for the first time, changes can be made for the individual drive objects regarding the activity (p4956) of the OA applications.

p0009 = 55: OA application installation

OA applications can be installed and/or uninstalled in this state.

p0009 = 101: Topology input

In this state, the DRIVE-CLiQ target topology can be entered using p9902 and p9903.

p0009 = 111: Insert drive object

This state allows a new drive object to be inserted using p9911.

p0009 = 112: Delete drive object

This state allows existing drive objects to be deleted using p9912 after the device has been commissioned for the first time.

p0009 = 113: Change drive object number

This state allows the drive object number of existing drive objects to be changed using p9913 after the device has been commissioned for the first time.

p0009 = 114: Change component number

This state allows the component number of existing components to be changed using p9914 after the device has been commissioned for the first time.

p0009 = 115: Parameter download

This state allows the complete device and drive commissioning using the parameter services.

p0009 = 117: Delete component

This state allows components to be deleted using p9917 after the device has been commissioned for the first time.

p0010 Infeed commissioning parameter filter / INF comm par_filt

B_INF

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	30	1

Description: Sets the parameter filter to commission an infeed unit.

Setting this parameter filters out the parameters that can be written into in the various commissioning steps.

Value:
0: Ready
1: Quick commissioning
2: Power unit commissioning
5: Technological application/units
29: Only Siemens int
30: Parameter reset

Note: The drive can only be powered up outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0.

For p3900 not equal to 0, at the end of the quick commissioning, this parameter is automatically reset to 0.

Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 Encoder DO commissioning parameter filter / EncDO com par_filt

ENC

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	30	0

Description: Sets the parameter filter to commission an encoder drive object.

Setting this parameter filters out the parameters that can be written into in the various commissioning steps.

For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
4: Encoder commissioning
5: Technological application/units
29: Only Siemens int
30: Parameter reset

Note: Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 TB30 commissioning parameter filter / TB30 comm.par_filt

TB30

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	30	0

Description: Sets the parameter filter for commissioning a Terminal Board 30 (TB30).

Setting this parameter filters out the parameters that can be written into in the various commissioning steps.

For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
29: Only Siemens int
30: Parameter reset

Dependency: Refer to: p0970

Note: Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010	TM150 commissioning parameter filter / TM150 com par_filt		
TM150	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	30	0

Description: Sets the parameter filter for commissioning a Terminal Module 150 (TM150).
Setting this parameter filters out the parameters that can be written into in the various commissioning steps.
For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
29: Only Siemens int
30: Parameter reset

Dependency: Refer to: p0970

Note: Only the following values are possible: p0010 = 0, 30
Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010	TM31 commissioning parameter filter / TM31 comm par_filt		
TM31	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	30	0

Description: Sets the parameter filter for commissioning a Terminal Module 31 (TM31).
Setting this parameter filters out the parameters that can be written into in the various commissioning steps.
For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
29: Only Siemens int
30: Parameter reset

Dependency: Refer to: p0970

Note: Only the following values are possible: p0010 = 0, 30
Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010	TM54F commissioning parameter filter / TM54F com par_filt		
TM54F_MA	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 2847
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	95	0

Description: Sets the parameter filter for commissioning a Terminal Module 54F (TM54F).
Setting this parameter filters out the parameters that can be written into in the various commissioning steps.
For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
29: Only Siemens int
30: Parameter reset
95: Safety Integrated commissioning

Dependency: Refer to: p0970

Note: Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010	**Drive commissioning parameter filter / Drv comm. par_filt**		
VECTOR_G	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 2800, 2818
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	10000	1

Description: Sets the parameter filter to commission a drive.

Setting this parameter filters out the parameters that can be written into in the various commissioning steps.

Value:
0: Ready
1: Quick commissioning
2: Power unit commissioning
3: Motor commissioning
4: Encoder commissioning
5: Technological application/units
15: Data sets
17: Basic positioner commissioning
25: Position control commissioning
29: Only Siemens int
30: Parameter reset
95: Safety Integrated commissioning
10000: Ready with immediate feedback signal

Notice: For p0010 = 10000 the following applies:

After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: The drive can only be powered up outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0.

By setting p3900 to a value other than 0, the quick commissioning is completed, and this parameter is automatically reset to 0.

Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 = 10000 corresponds to p0010 = 0. Unlike with p0010 = 0, the parameter modification is applied immediately and the calculations are made in the background. Further parameter modifications cannot be made while the calculations are being performed.

p0011	**BOP password entry (p0013) / BOP passw ent p13**		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Sets the password for the Basic Operator Panel (BOP).

Dependency: Refer to: p0012, p0013

p0012	**BOP password acknowledgement (p0013) / BOP passw ackn p13**		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Acknowledges the password for the Basic Operator Panel (BOP).

Dependency: Refer to: p0011, p0013

p0013[0...49]	**BOP user-defined list / BOP list**		
All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Sets the required parameters to read and write via the Basic Operator Panel (BOP).

Activation:

1. p0003 = 3 (expert).
2. p0013[0...49] = requested parameter number
3. If required, enter p0011 = password in order to prevent non-authorized de-activation.
4. p0016 = 1 --> activates the selected user-defined list.

De-activation/change:

1. p0003 = 3 (expert).
2. If required, p0012 = p0011, in order to be authorized to change or de-activate the list.
3. If required p0013[0...49] = required parameter number.
4. p0016 = 1 --> activates the modified user-defined list.
5. p0003 = 0 --> de-activates the user-defined list.

Dependency: Refer to: p0009, p0011, p0012, p0976

Note: The following parameters can be read and written on the Control Unit drive object:

- p0003 (access stage)
- p0009 (device commissioning, parameter filter)
- p0012 (BOP password acknowledgement (p0013))

The following applies for the user-defined list:

- password protection is only available on the drive object Control Unit and is valid for all of the drive objects.
- p0013 cannot be included in the user-defined list for all drive objects.
- p0003, p0009, p0011, p0012, p0976 cannot, for the drive object Control Unit, be included in the user-defined list.
- the user-defined list can be cleared and de-activated "restore factory setting".

A value of 0 means: Entry is empty.

p0015	**Macro drive object / Macro DO**		
B_INF, TM150, TM31, VECTOR_G	**Can be changed:** C2(1)	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	999999	0

Description: Runs the corresponding macro files.

The selected macro file must be available on the memory card/device memory.

Example:

p0015 = 6 --> the macro file PM000006.ACX is run.

Dependency: Refer to: p0700, p1000, p1500, r8570

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

When executing a specific macro, the corresponding programmed settings are made and become active.

No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!

Note: The macros in the specified directory are displayed in r8570. r8570 is not in the expert list of the commissioning software.

Macros available as standard are described in the technical documentation of the particular product.

p0015 Macro drive unit / Macro drv unit

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	999999	1

Description: Runs the corresponding macro files.

The selected macro file must be available on the memory card/device memory.

Example:

p0015 = 6 --> the macro file PM000006.ACX is run.

Dependency: Refer to: p0700, p1000, p1500, r8570

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

When executing a specific macro, the corresponding programmed settings are made and become active.

Note: The macros in the specified directory are displayed in r8570. r8570 is not in the expert list of the commissioning software.

Macros available as standard are described in the technical documentation of the particular product.

p0016 Activate BOP user-defined list / BOP user list act

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1, U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting for activating/de-activating the user-defined list for the Basic Operator Panel (BOP).

If p0016 = 1, then it is only possible to access parameters in the parameter list (p0013).

Value:
0: BOP user-defined list de-activated
1: BOP user-defined list activated

Dependency: Refer to: p0011, p0012, p0013

Note: The user-defined list can only be de-activated with p0011 = p0012

r0018 Control Unit firmware version / CU FW version

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4294967295	-

Description: Displays the firmware version of the Control Unit.

Dependency: Refer to: r0128, r0148, r0158, r0197, r0198

Note: Example:

The value 1010100 should be interpreted as V01.01.01.00.

r0019.0...14 CO/BO: Control word BOP / STW BOP

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 9912
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the control word for the Basic Operator Panel (BOP).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	ON / OFF (OFF1)	ON	OFF (OFF1)	-
01	No coast-down / coast-down (OFF2)	No coast down	Coast down (OFF2)	-
02	No Quick Stop / Quick Stop (OFF3)	No Quick Stop	Quick Stop (OFF3)	-
07	Acknowledge fault (0 -> 1)	Yes	No	-
13	Motorized potentiometer raise	Yes	No	-
14	Motorized potentiometer lower	Yes	No	-

r0020 Speed setpoint smoothed / n_set smth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5020, 6799
P-Group: Displays, signals	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the currently smoothed speed setpoint at the input of the speed controller or U/f characteristic (after the interpolator).

Dependency: Refer to: r0060

Note: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The speed setpoint is available smoothed (r0020) and unsmoothed (r0060).

r0021 CO: Actual speed smoothed / n_act smooth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6799
P-Group: Displays, signals	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the smoothed actual value of the motor speed.

For U/f control and when slip compensation is deactivated (see p1335), the synchronous speed to the output frequency is shown in r0021.

Dependency: Refer to: r0022, r0063

Note: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).

For U/f control, the mechanical speed calculated from the output frequency and the slip is shown in r0063[2] even if slip compensation is deactivated.

r0022 Speed actual value rpm smoothed / n_act rpm smooth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6799
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the smoothed actual value of the motor speed.

r0022 is identical to r0021, however, it always has units of rpm and contrary to r0021 cannot be changed over.

For U/f control and when slip compensation is deactivated (see p1335), the synchronous speed to the output frequency is shown in r0022.

Dependency: Refer to: r0021, r0063

Note: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).

For U/f control, the mechanical speed calculated from the output frequency and the slip is shown in r0063[2] even if slip compensation is deactivated.

r0024 Output frequency smoothed / f_outp smooth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5300, 5730, 6300, 6799
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the smoothed converter frequency.

Dependency: Refer to: r0066

Note: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The output frequency is available smoothed (r0024) and unsmoothed (r0066).

r0025 CO: Output voltage smoothed / U_outp smooth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5730, 6300, 6799
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the smoothed output voltage of the power unit.

Dependency: Refer to: r0072

Note: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The output voltage is available smoothed (r0025) and unsmoothed (r0072).

r0026	**CO: DC link voltage smoothed / Vdc smooth**		
B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5730, 6799, 8750, 8850, 8950
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Displays the smoothed actual value of the DC link voltage.

Dependency: Refer to: r0070

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

Note: A_INF, B_INF, S_INF: smoothing time constant = 300 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).

r0026	**CO: DC link voltage smoothed / Vdc smooth**		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6799, 8750, 8850, 8950
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Displays the smoothed actual value of the DC link voltage.

Dependency: Refer to: r0070

Notice: For SINAMICS S120 AC Drive (AC/AC) the following applies:

When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24 V power supply is connected, a value of approx. 24 V is displayed in the display parameter.

Note: SERVO, VECTOR: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).

r0027	**CO: Absolute actual current smoothed / I_act abs val smth**		
B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8750
	P-Group: Displays, signals	**Units group:** 6_4	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: Displays the smoothed absolute actual current value.

Dependency: Refer to: r0068

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.

Note: Smoothing time constant = 300 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).

r0027 CO: Absolute actual current smoothed / I_act abs val smth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5730, 6799, 8850, 8950
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed absolute actual current value.

Dependency: Refer to: r0068

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

Note: A_INF, S_INF, VECTOR: Smoothing time constant = 300 ms

SERVO: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).

r0028 Modulation depth smoothed / Mod_depth smth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5730, 6799, 8950
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the smoothed actual value of the modulation depth.

Dependency: Refer to: r0074

Note: A_INF: Smoothing time constant = 300 ms

SERVO, VECTOR: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The modulation depth is available smoothed (r0028) and unsmoothed (r0074).

r0029 Current actual value field-generating smoothed / Id_act smooth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5730, 6799
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed field-generating actual current.

Dependency: Refer to: r0076

Note: SERVO: Smoothing time constant = 100 ms

VECTOR: Smoothing time constant = 300 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The field-generating current actual value is available smoothed (r0029) and unsmoothed (r0076).

r0030	Current actual value torque-generating smoothed / Iq_act smooth		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5730, 6799
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed torque-generating actual current.

Dependency: Refer to: r0078

Note: SERVO: Smoothing time constant = 100 ms

VECTOR: Smoothing time constant = 300 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The following applies for SERVO:

The torque-generating current actual value is available smoothed (r0030 with 100 ms, r0078[1] with p0045) and unsmoothed (r0078[0]).

The following applies for VECTOR:

The torque-generating current actual value is available smoothed (r0030 with 300 ms) and unsmoothed (r0078).

r0031	Actual torque smoothed / M_act smooth		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5730, 6799
	P-Group: Displays, signals	**Units group:** 7_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2003	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Nm]	- [Nm]	- [Nm]

Description: Displays the smoothed torque actual value.

Dependency: Refer to: r0080

Note: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The torque actual value is available smoothed (r0031) and unsmoothed (r0080).

r0032	CO: Active power actual value smoothed / P_actv_act smth		
B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5730, 6799, 8750, 8850, 8950
	P-Group: Displays, signals	**Units group:** 14_10	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** r2004	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [kW]	- [kW]	- [kW]

Description: Displays the smoothed actual value of the active power.

Dependency: Refer to: r0082

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.

Note: Significance for the drive: Power output at the motor shaft

Significance for the infeed: Line power drawn

For A_INF, B_INF and S_INF the following applies:

The active power is available smoothed (r0032 with 300 ms) and unsmoothed (r0082).

The following applies for SERVO:

The active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]).

For VECTOR and VECTORMV, the following applies:

The active power is available smoothed (r0032 with 100 ms) and unsmoothed (r0082).

r0032 CO: Active power actual value smoothed / P_actv_act smth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5730, 6799, 8750, 8850, 8950
P-Group: Displays, signals	**Units group:** 14_10	**Unit selection:** p0505
Not for motor type: -	**Scaling:** r2004	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kW]	- [kW]	- [kW]

Description: Displays the smoothed actual value of the active power.

Dependency: Refer to: r0082

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

Note: Significance for the drive: Power output at the motor shaft

Significance for the infeed: Line power drawn

For A_INF, B_INF and S_INF the following applies:

The active power is available smoothed (r0032 with 300 ms) and unsmoothed (r0082).

The following applies for SERVO:

The active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]).

For VECTOR and VECTORMV, the following applies:

The active power is available smoothed (r0032 with 100 ms) and unsmoothed (r0082).

r0033 Torque utilization smoothed / M_util smooth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8012
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the smoothed torque utilization as a percentage.

The torque utilization is obtained from the required smoothed torque in reference to the torque limit, scaled using p2196.

Note: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The torque utilization is available smoothed (r0033) and unsmoothed (r0081).

For M_set total (r0079) > 0, the following applies:

- Required torque = M_set total

- Actual torque limit = M_max upper effective (r1538)

For M_set total (r0079) <= 0, the following applies:

- Required torque = - M_set total

- Actual torque limit = - M_max lower effective (r1539)

For the actual torque limit = 0, the following applies: r0033 = 100 %

For the actual torque limit < 0, the following applies: r0033 = 0 %

r0034 CO: Motor utilization thermal / Mot_util therm

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8017
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL, FEM	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the motor utilization from motor temperature model 1 (I2t) or 3.

Dependency: The thermal motor utilization is only determined for permanent-magnet synchronous motors when the motor temperature model 1 (I2t) or 3 is activated.

For motor temperature model 1 (I2t) (p0612.0 = 1), the following applies:

- r0034 = (motor model temperature - 40 K) / (p0605 - 40 K) * 100 %

For motor temperature model 3 (p0612.2 = 1), the following applies:

- r0034 = (motor model temperature - p5397) / (p5398 - p5397) * 100 %

Refer to: p0611, p0612, p0615

Notice: After the drive is switched on, the system starts to determine the motor temperature with an assumed model value. This means that the value for the motor utilization is only valid after a stabilization time.

Note: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

For r0034 = -200.0 %, the following applies:

The value is invalid (e.g. the motor temperature model is not activated or has been incorrectly parameterized).

r0035 CO: Temperature input / Temp_input

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8750
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the temperature currently measured at X21 (booksize) or X41 (chassis).

For a BLM with internal Braking Module, a bimetallic sensor must be connected up to monitor the temperature of the braking resistor. The temperature sensor type is indicated using p0601 and cannot be changed for the existing internal Braking Module.

Temperature within permissible limit values: r0035 = -50°C

Temperature outside the permissible limit values: r0035 = 250°C

Notice: The function in r0192.11 must be available in order to obtain a correct display.

Note: For r0035 equal to -200.0 °C, the following applies:

- "no sensor" selected in p0601!

For r0035 equal to -300.0 °C, the following applies:

- a KTY84 is selected in p0601 but is not connected!
- the temperature display is not valid (temperature sensor error)!

r0035 CO: Motor temperature / Mot temp

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8016, 8017
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Display and connector output for the actual temperature in the motor.

Note: For r0035 not equal to -200.0 °C, the following applies:

- this temperature display is valid.
- a KTY sensor is connected.
- the thermal model for the induction motor is activated (p0612 bit 1 = 1 and temperature sensor de-activated: p0600 = 0 or p0601 = 0).

For r0035 equal to -200.0 °C, the following applies:

- this temperature display is not valid (temperature sensor error).
- A PTC sensor or bimetallic NC contact is connected.
- the temperature sensor of the synchronous motor is de-activated (p0600 = 0 or p0601 = 0).

r0036	CO: Power unit overload I2t / PU overload I2t		
B_INF, VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8014
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [%]	- [%]	- [%]

Description: Displays the power unit overload determined using the I2t calculation.

A current reference value is defined for the I2t monitoring of the power unit. It represents the current that can be conducted by the power unit without any influence of the switching losses (e.g. the continuously permissible current of the capacitors, inductances, busbars, etc.).

If the I2t reference current of the power unit is not exceeded, then an overload (0 %) is not displayed.

In the other case, the degree of thermal overload is calculated, whereby 100% results in a trip.

Dependency: Refer to: p0290, p0294

r0037[0...19]	CO: Power unit temperatures / PU temperatures		
B_INF, VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8014
	P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°C]	- [°C]	- [°C]

Description: Display and connector output for the temperature in the power unit.

Index:
[0] = Inverter maximum value
[1] = Depletion layer maximum value
[2] = Rectifier maximum value
[3] = Air intake
[4] = Interior of power unit
[5] = Inverter 1
[6] = Inverter 2
[7] = Inverter 3
[8] = Inverter 4
[9] = Inverter 5
[10] = Inverter 6
[11] = Rectifier 1
[12] = Rectifier 2
[13] = Depletion layer 1
[14] = Depletion layer 2
[15] = Depletion layer 3
[16] = Depletion layer 4
[17] = Depletion layer 5
[18] = Depletion layer 6
[19] = Cooling unit liquid intake

Notice: Only for internal Siemens troubleshooting.

Note: The value of -200 indicates that there is no measuring signal.

r0037[0]: Maximum value of the inverter temperatures (r0037[5...10]).

r0037[1]: Maximum value of the depletion layer temperatures (r0037[13...18]).

r0037[2]: Maximum value of the rectifier temperatures (r0037[11...12]).

The maximum value is the temperature of the hottest inverter, depletion layer, or rectifier.

In the case of a fault, the particular shutdown threshold depends on the power unit, and cannot be read out.

r0037[0...1]	**Control Unit temperature / CU temp**		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°C]	- [°C]	- [°C]

Description: Displays the measured Control Unit temperature.

An appropriate message is output when the permitted operating temperature is exceeded.

Index: [0] = Actual measured value
[1] = Maximum measured value

Notice: Only for internal Siemens troubleshooting.

Note: The value of -200 indicates that there is no measuring signal.

r0038	**Power factor smoothed / Cos phi smooth**		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6799, 8850, 8950
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the smoothed actual power factor.

Notice: For infeed units, the following applies:

For active powers < 25 % of the rated power, this does not provide any useful information.

Note: Smoothing time constant = 300 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

Meaning for motor:

- power factor of the basic fundamental signals at the converter output.

Meaning for infeed:

- Power factor at the connection point (r3470, r3471)

r0039[0...2]	**Energy display / Energy displ**		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [kWh]	- [kWh]	- [kWh]

Description: Displays the energy values at the output terminals of the power unit.

Index: [0] = Energy balance (sum)
[1] = Energy drawn
[2] = Energy fed back

Dependency: Refer to: p0040

Note: Re index 0:

Sum of the energy drawn and energy that is fed back.

p0040 Reset energy consumption display / Energy usage reset

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Setting to reset the display in r0039 and r0041.

Procedure:

Set p0040 = 0 --> 1

The displays are reset and the parameter is automatically set to zero.

Dependency: Refer to: r0039

r0041 Energy consumption saved / Energy cons saved

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [kWh]	- [kWh]	- [kWh]

Description: Displays the saved energy referred to 100 operating hours.

Dependency: Refer to: p0040

Note: This display is used for a fluid-flow machine.

The flow characteristic is entered into p3320 ... p3329.

For an operating time of below 100 hours, the display is interpolated up to 100 hours.

p0045 Display values smoothing time constant / Disp_val T_smooth

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4715, 5610, 5730, 6714, 8012
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [ms]	10000.00 [ms]	1.00 [ms]

Description: Sets the smoothing time constant for the following display values:

SERVO: r0078[1], r0079[1], r0081 (calculated from the quantities smoothed with p0045), r0082[1].

VECTOR: r0063[1], r0068[1], r0080[1], r0082[1].

r0046.0...29 CO/BO: Missing enable sig / Missing enable sig

B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8734
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Display and BICO output for missing enable signals that are preventing the closed-loop infeed control from being commissioned.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	OFF1 enable missing	Yes	No	-
01	OFF2 enable missing	Yes	No	-
08	EP terminals enable missing	Yes	No	-
16	OFF1 enable internal missing	Yes	No	-
17	OFF2 enable internal missing	Yes	No	-

26	Infeed inactive or not operational	Yes	No	-
29	Cooling unit ready signal missing	Yes	No	-

Dependency: Refer to: r0002

Note: The value r0046 = 0 indicates that all enable signals for the infeed are present.

Bit 00 = 1 (enable signal missing), if:

- the signal source in p0840 is a 0 signal.

- there is a "switching on inhibited".

Bit 01 = 1 (enable signal missing), if:

- the signal source in p0844 or p0845 is a 0 signal.

Bit 16 = 1 (enable signal missing), if:

- there is an OFF1 fault response. The system is only enabled if the fault is removed and was acknowledged and the "switching on inhibited" withdrawn with OFF1 = 0.

Bit 17 = 1 (enable signal missing), if:

- the commissioning mode is selected (p0009 > 0 or p0010 > 0) or there is an OFF2 fault response or the OFF1 signal source (p0840) is changed.

Bit 26 = 1 (enable signal missing), if:

- the infeed is inactive (p0105 = 0) or is not operational (r7850[DO-Index]=0).

Bit 29 = 1 (enable signal missing), if:

- the cooling unit ready signal via binector input p0266[1] missing.

r0046.0...31 CO/BO: Missing enable sig / Missing enable sig

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 2634
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -

28	Brake open missing	Yes	No	-
29	Cooling unit ready signal missing	Yes	No	-
30	Speed controller inhibited	Yes	No	-
31	Jog setpoint active	Yes	No	-

Dependency: Refer to: r0002

Note: The value r0046 = 0 indicates that all enable signals for this drive are present.

Bit 00 = 1 (enable signal missing), if:
- the signal source in p0840 is a 0 signal.
- there is a "switching on inhibited".

Bit 01 = 1 (enable signal missing), if:
- the signal source in p0844 or p0845 is a 0 signal.

Bit 02 = 1 (enable signal missing), if:
- the signal source in p0848 or p0849 is a 0 signal.

Bit 03 = 1 (enable signal missing), if:
- the signal source in p0852 is a 0 signal.

Bit 04 =1 (armature short-circuit active), if:
- the signal source in p1230 has a 1 signal

Bit 05, Bit 06: Being prepared

Bit 08 = 1 (enable signal missing), if:
- safety functions have been enabled and STO is active.

STO selected via terminals:
- the pulse enable via terminal EP is missing (booksize: X21, chassis: X41), or the signal source in p9620 is for a 0 signal.

STO selected via PROFIsafe or TM54F:
- A safety-relevant signal is present with a STOP A response.

Bit 09 = 1 (enable signal missing), if:
- the signal source in p0864 is a 0 signal.

Bit 10 = 1 (enable signal missing), if:
- the signal source in p1140 is a 0 signal.

Bit 11 = 1 (enable signal missing) if the speed setpoint is frozen, because:
- the signal source in p1141 is a 0 signal.
- the speed setpoint is entered from jogging and the two signal sources for jogging, bit 0 (p1055) and bit 1 (p1056) have a 1 signal.

Bit 12 = 1 (enable signal missing), if:
- the signal source in p1142 is a 0 signal.
- When activating the function module "basic positioner" (r0108.4 = 1), the signal source in p1142 is set to a 0 signal.

Bit 16 = 1 (enable signal missing), if:
- there is an OFF1 fault response. The system is only enabled if the fault is removed and was acknowledged and the "switching on inhibited" withdrawn with OFF1 = 0.

Bit 17 = 1 (enable signal missing), if:
- commissioning mode is selected (p0009 > 0 or p0010 > 0).
- there is an OFF2 fault response.
- the drive is inactive (p0105 = 0) or is not operational (r7850[DO-Index]=0).

Bit 18 = 1 (enable signal missing), if:
- OFF3 has still not been completed or an OFF3 fault response is present.

Bit 19 = 1 (internal pulse enable missing), if:
- synchronization is running between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle.

Bit 20 =1 (internal armature short-circuit active), if:
- the drive is not in the state "S4: Operation" or "S5x" (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

Bit 21 = 1 (enable signal missing), if:

The pulses have been enabled and the speed setpoint has still not been enabled, because:
- the holding brake opening time (p1216) has still not expired.
- the motor has still not been magnetized (induction motor).
- the encoder has not been calibrated (U/f vector and synchronous motor)

Bit 22: Being prepared

Bit 26 = 1 (enable signal missing), if:
- the drive is inactive (p0105 = 0) or is not operational (r7850[DO-Index]=0).
- the function "parking axis" is selected (BI: p0897 = 1 signal)..
- all power units of a parallel connection are deactivated (p0125, p0895).

Bit 27 = 1 (enable signal missing), if:
- de-magnetizing has still not been completed (only for vector).
Bit 28 = 1 (enable signal missing), if:
- the holding brake is closed or has still not been opened.
Bit 29 = 1 (enable signal missing), if:
- the cooling unit ready signal via binector input p0266[1] missing.
Bit 30 = 1 (speed controller inhibited), if one of the following reasons is present:
- A 0 signal is available via binector input p0856.
- the function generator with current input is active.
- the measuring function "current controller reference frequency characteristic" is active.
- the pole position identification is active.
- motor data identification is active (only certain steps).
Bit 31 = 1 (enable signal missing), if:
- the speed setpoint from jog 1 or 2 is entered.

r0047 Motor data identification and speed controller optimization / MotID and n_opt

VECTOR_G

Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the actual speed setpoint at the input of the speed controller or U/f characteristic (after the interpolator).

Dependency: Refer to: r0020

Note: The speed setpoint is available smoothed (r0020) and unsmoothed (r0060).

r0061 CO: Actual speed unsmoothed / n_act unsmoothed

ENC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4700, 4710, 4715
P-Group: Displays, signals	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the unsmoothed actual speed values sensed by the encoders.

Note: The speed actual value within a PROFIBUS cycle (r2064[1]) is averaged and displayed.

r0061 CO: Actual velocity unsmoothed / v_act unsmoothed

ENC (Lin_enc)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4700, 4710, 4715
P-Group: Displays, signals	**Units group:** 4_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [m/min]	- [m/min]	- [m/min]

Description: Displays the unsmoothed actual velocity values sensed by the encoders.

Note: The velocity actual value within a PROFIBUS cycle (r2064[1]) is averaged and displayed.

r0061[0...2] CO: Actual speed unsmoothed / n_act unsmoothed

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4700, 4710, 4715
P-Group: Displays, signals	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the actual speed values sensed by the encoders.

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Note: With a parameterized filter time constant p1441, the speed signal from encoder 1 is displayed corrected by the following error.

The speeds from encoder 2 and 3 are only displayed in U/f operating modes if the function module (speed/torque control) (r0108.2) has been activated.

r0062 CO: Speed setpoint after the filter / n_set after filter

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6020, 6030, 6031
	P-Group: Displays, signals	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the speed setpoint after the setpoint filters.

r0063[0...2] CO: Speed actual value / n_act

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4702, 4715, 6799
	P-Group: Displays, signals	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the actual speed of the closed-loop speed control and the U/f control.

For U/f control and when slip compensation is deactivated (see p1335), the synchronous speed to the output frequency is shown in r0063[0].

Index:
[0] = Unsmoothed
[1] = Smoothed with p0045
[2] = Calculated from f_set - f_slip

Dependency: Refer to: r0021, r0022

Note: The speed actual value is calculated in encoderless operation and for U/f control.

For operation with encoder, r0063[0] is smoothed with p1441.

The speed actual value (r0063[0]) is additionally displayed - smoothed with p0045 - in r0063[1].

The speed (r0063[2]) calculated from the output frequency and slip can only be compared with the speed actual value (r0063[0]) in the steady-state.

The actual speed (r0063[0]) is available as a display quantity with additional smoothing in r0021.

r0064 CO: Speed controller system deviation / n_ctrl system dev

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5040, 6040
	P-Group: Displays, signals	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the actual system deviation of the speed controller.

Note: In servo control mode with active reference model, the system deviation to the P component of the speed controller is displayed.

r0065	Slip frequency / f_Slip		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6310, 6700, 6727, 6730, 6732

	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Hz]	- [Hz]	- [Hz]

Description: Displays the slip frequency for induction motors (ASM).

r0066	CO: Output frequency / f_outp		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5300, 5730, 6300, 6310, 6730, 6731, 6799
	P-Group: Displays, signals	**Units group:** 2_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Hz]	- [Hz]	- [Hz]

Description: Display and connector output for the output frequency of the Motor Module.

Dependency: Refer to: r0024

Note: The output frequency is available smoothed (r0024) and unsmoothed (r0066).

r0067	CO: Output current maximum / I_outp max		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5722, 6300, 6301, 6640
	P-Group: Displays, signals	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Display and connector output for the maximum output current of the power unit.

Dependency: The maximum output current is determined by the parameterized current limit and the motor and converter thermal protection.

Refer to: p0290, p0640

r0068	CO: DC current in the DC link / Idc DC link		
B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8014, 8750
	P-Group: Displays, signals	**Units group:** 6_4	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: Displays the DC current in the DC link.

Dependency: Refer to: r0027

Notice: For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.

Note: The DC current in the DC link is available smoothed (r0027) and unsmoothed (r0068).

r0068[0...1] CO: Absolute current actual value / I_act abs val

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6300, 6714, 6799, 7017, 8014, 8017, 8018
	P-Group: Displays, signals	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays actual absolute current.

Index:
[0] = Unsmoothed
[1] = Smoothed with p0045

Dependency: Refer to: r0027

Notice: The value is updated with the current controller sampling time.

Note: Absolute current value = sqrt(Iq^2 + Id^2)

The absolute value of the current actual value is available smoothed (r0027 with 300 ms, r0068[1] with p0045) and unsmoothed (r0068[0]).

r0069[0...6] CO: Phase current actual value / I_phase act value

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6730, 6731, 6732, 7983, 7987, 8850, 8950
	P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: Display and connector output for the measured actual phase currents as peak value.

Index:
[0] = Phase U
[1] = Phase V
[2] = Phase W
[3] = Phase U offset
[4] = Phase V offset
[5] = Phase W offset
[6] = Total U, V, W

Note: In indices 3 ... 5, the offset currents of the 3 phases, which are added to correct the phase currents, are displayed.

The sum of the 3 corrected phase currents is displayed in index 6.

r0070 CO: Actual DC link voltage / Vdc act val

B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8750, 8850, 8910, 8940, 8950, 8964
	P-Group: Displays, signals	**Units group:** 5_2	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Display and connector output for the measured actual value of the DC link voltage.

Dependency: Refer to: r0026

Note: The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).

r0070 CO: Actual DC link voltage / Vdc act val

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6723, 6724, 6730, 6731, 6799
P-Group: Displays, signals	**Units group:** 5_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Display and connector output for the measured actual value of the DC link voltage.

Dependency: Refer to: r0026

Notice: For SINAMICS S120 AC Drive (AC/AC) the following applies:

When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24V power supply is connected, a value of approx. 24 V is displayed.

Note: The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).

r0071 Maximum output voltage / U_output max

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6301, 6640, 6700, 6722, 6723, 6724, 6725, 6727
P-Group: Displays, signals	**Units group:** 5_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the maximum output voltage.

Dependency: The maximum output voltage depends on the actual DC link voltage (r0070) and the maximum modulation depth (p1803).

Note: As the (driven) motor load increases, the maximum output voltage drops as a result of the reduction in DC link voltage.

r0072 CO: Output voltage / U_output

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5700, 5730, 6730, 6731, 6799
P-Group: Displays, signals	**Units group:** 5_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Display and connector output for the actual output voltage of the power unit (Motor Module).

Dependency: Refer to: r0025

Note: The output voltage is available smoothed (r0025) and unsmoothed (r0072).

r0073 Maximum modulation depth / Modulat_depth max

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6723, 6724, 6725
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the maximum modulation depth.

Dependency: Refer to: p1803

r0074	CO: Modulat_depth / Modulat_depth		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5730, 6730, 6731, 6799, 8940, 8950
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [%]	- [%]	- [%]

Description: Displays the actual modulation depth.

Dependency: Refer to: r0028

Note: For space vector modulation, 100% corresponds to the maximum output voltage without overcontrol.
Values above 100 % indicate an overcontrol condition - values below 100% have no overcontrol.
The phase voltage (phase-to-phase, rms) is calculated as follows:(r0074 x r0070) / (sqrt(2) x 100 %).
The modulation depth is available smoothed (r0028) and unsmoothed (r0074).

r0075	CO: Current setpoint field-generating / Id_set

	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Display and connector output for the torque/force-generating current setpoint.

Note: This value is irrelevant for the U/f control mode.

r0078 CO: Current actual value torque-generating / Iq_act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6310, 6700, 6714, 6799
P-Group: Displays, signals	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Display and connector output for the torque-generating current actual voltage (Iq_act).

Dependency: Refer to: r0030

Note: This value is irrelevant for the U/f control mode.

The torque-generating current actual value is available smoothed (r0030 with 300 ms) and unsmoothed (r0078).

r0079 CO: Torque setpoint / M_set

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6020, 6060, 6710
P-Group: Displays, signals	**Units group:** 7_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the torque setpoint at the output of the speed controller.

r0080[0...1] CO: Torque actual value / M_act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6714, 6799
P-Group: Displays, signals	**Units group:** 7_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for actual torque value.

Index: [0] = Unsmoothed
[1] = Smoothed with p0045

Dependency: Refer to: r0031, p0045

Note: The value is available smoothed (r0031 with 100 ms, r0080[1] with p0045) and unsmoothed (r0080[0]).

r0081 CO: Torque utilization / M_Utilization

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8012
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the torque utilization as a percentage.

The torque utilization is obtained from the required smoothed torque referred to the torque limit.

Dependency: Refer to: r0033

Note: The torque utilization is available smoothed (r0033) and unsmoothed (r0081).

The torque utilization is obtained from the required torque referred to the torque limit as follows:

- Positive torque: r0081 = (r0079 / r1538) * 100 %
- Negative torque: r0081 = (-r0079 / -r1539) * 100 %

r0082 — CO: Active power actual value / P_act

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8750, 8850, 8950
P-Group: Displays, signals	**Units group:** 14_7	**Unit selection:** p0505
Not for motor type: -	**Scaling:** r2004	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kW]	- [kW]	- [kW]

Description: Displays the instantaneous active power.

Dependency: Refer to: r0032

Notice: For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.

Note: The active power is available smoothed (r0032) and unsmoothed (r0082).

r0082[0...2] — CO: Active power actual value / P_act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6714, 6799
P-Group: Displays, signals	**Units group:** 14_5	**Unit selection:** p0505
Not for motor type: -	**Scaling:** r2004	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kW]	- [kW]	- [kW]

Description: Displays the instantaneous active power.

Index:
[0] = Unsmoothed
[1] = Smoothed with p0045
[2] = Electric power

Dependency: Refer to: r0032

Note: The mechanical active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]).

r0083 — CO: Flux setpoint / Flex setp

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the flux setpoint.

r0084[0...1] — CO: Flux actual value / Flux act val

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6726, 6730, 6732
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the flux actual value.

Index:
[0] = Unsmoothed
[1] = Smoothed

Note: The flux actual value (index 1) smoothed with p1585 is only displayed for separately-excited synchronous motors. In the following cases, the unsmoothed flux actual value is also displayed:

- in the range of the current model.
- during the pole position identification.

- for I/f control.
- for a stalled drive.

r0087 CO: Actual power factor / Cos phi act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6714, 6730, 6732, 6799
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual active power factor.

r0088 CO: DC link voltage setpoint / Vdc setpoint

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 5_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the setpoint for the DC link voltage.

r0089[0...2] Actual phase voltage / U_phase act val

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6719
P-Group: Displays, signals	**Units group:** 5_3	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the actual phase voltage.

Index:
[0] = Phase U
[1] = Phase V
[2] = Phase W

Note: The values are determined from the transistor power-on duration.

p0092 Clock synchronous operation pre-assignment/check / Cl sync op pre-as

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1(1)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to pre-assign/check the sampling times for the internal controller clock cycles for clock-synchronous PROFIdrive operation.

Re p0092 = 1:

The controller clock cycles are set so that clock synchronous PROFIdrive operation is possible. If it is not possible to change the controller clock cycles of the clock-cycle synchronous PROFIdrive operation, then an appropriate message is output.

The pre-setting of the controller clock cycles can result in a derating of the Motor Module (e.g. p0115[0] = 400 µs --> 375 µs).

When calculating the drive unit utilization (r9976), when using the fixed DCC runtime groups "Receive AFTER IF1 PROFIdrive PZD", "Send BEFORE IF1 PROFIdrive PZD", "Receive AFTER IF2 PZD" (from V4.4) and "Send BEFORE IF2 PZD" (from V4.4), then its maximum computing time load has already been calculated during ramp-up for isochronous operation and taken into account in r9976 (from V4.3).

Re p0092 = 0:

The controller clock cycles are set without any restrictions by the clock-cycle PROFIdrive operation (same as for up to V2.3).

When calculating the drive unit utilization (r9976), when using the fixed DCC runtime groups "Receive AFTER IF1 PROFIdrive PZD", "Send BEFORE IF1 PROFIdrive PZD", "Receive AFTER IF2 PZD" (from V4.4) and "Send BEFORE IF2 PZD" (from V4.4), then its maximum computing time load has already been calculated during ramp-up for isochronous operation and taken into account in r9976 (from V4.3).

Value:
0: No isochronous PROFIBUS
1: Isochronous PROFIBUS

Dependency: Refer to: r0110, p0115

Caution:

Only current controller sampling times (p0115[0]) which are integers of 125 µs are permitted for isochronous mode.

For SERVO the following current controller sampling times are also possible:

187.5, 150, 100, 93.75, 75, 62.5, 50, 37.5, 31.25 µs

For VECTOR the following current controller sampling times are also possible:

312.5, 218.75, 200, 187.5, 175, 156.25, 150, 137.5 µs

The additional current controller sampling times must be taken into account when parameterizing the bus for Ti, To and Tdp.

Notice: p0092 only affects the automatic default for the sampling times (p0115) in the drive.

If the sampling times are modified subsequently in expert mode (p0112 = 0), p0092 = 0 should be set so that the new values are not overwritten again by the automatic default when the parameters are downloaded.

The conditions for current controller sampling time for isosynchronous operation must still be carefully ensured (refer under Caution!).

r0094 CO: Transformation angle / Transformat_angle

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4700, 4702, 4710, 6300, 6714, 6730, 6731, 6732
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2005	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°]	- [°]	- [°]

Description: Displays the transformation angle.

Dependency: Refer to: p0431, r1778

Note: The transformation angle corresponds to the electrical commutation angle.

If no pole position identification is carried out (p1982), and the encoder is adjusted, the following applies:

The encoder supplies the value and indicates the electrical angle of the flux position (d axis).

p0097 Select drive object type / Select DO type

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1(1)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	24	0

Description: Executes an automatic device configuration.

In so doing, p0099, p0107 and p0108 are appropriately set.

Value:
0: No selection
1: Drive object type SERVO
2: Drive object type VECTOR
3: SINAMICS GM (DFEMV & VECTORMV)
4: SINAMICS SM (AFEMV & VECTORMV)
5: SINAMICS GL (VECTORGL)
6: SINAMICS SL (VECTORSL)
12: Drive object type VECTOR parallel circuit
13: Drive object type VECTORMV - GM parallel circuit
14: Drive object type VECTORMV - SM parallel circuit

15: Drive object type DC_CTRL
16: Drive object type SERVO HMI
17: Drive object type VECTOR HMI
24: Drive object type VECTORMV - SM parallel circuit

Dependency: Refer to: r0098, p0099

Note: For p0097 = 0, p0099 is automatically set to the factory setting.

The possible settings are dependent upon the device type.

r0098[0...5] Actual device topology / Device_act topo

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the automatically detected actual device topology in coded form.

Index:
[0] = DRIVE-CLiQ socket X100
[1] = DRIVE-CLiQ socket X101
[2] = DRIVE-CLiQ socket X102
[3] = DRIVE-CLiQ socket X103
[4] = DRIVE-CLiQ socket X104
[5] = DRIVE-CLiQ socket X105

Dependency: Refer to: p0097, p0099

Note: Topology coding: abcd efgh hex

a = number of Active Line Modules

b = number of Motor Modules

c = number of motors

d = number of encoders (or the line supply voltage sensing for Active Line Modules)

e = number of additional encoders (or the line supply voltage sensing for Active Line Modules)

f = number of Terminal Modules

g = number of Terminal Boards

h = reserved

if the value 0 is displayed in all indices, then components are not detected via DRIVE-CLiQ.

If a value F hex occurs at a position of the coding (abcd efgh hex), then an overflow has occurred.

p0099[0...5] Device target topology / Device_target topo

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1(1)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the device target topology in coded form (refer to r0098). The setting is made during commissioning.

De-activated or non-available components are also counted

Index:
[0] = DRIVE-CLiQ socket X100
[1] = DRIVE-CLiQ socket X101
[2] = DRIVE-CLiQ socket X102
[3] = DRIVE-CLiQ socket X103
[4] = DRIVE-CLiQ socket X104
[5] = DRIVE-CLiQ socket X105

Dependency: The parameter can only be written into for p0097 = 0.

To perform an automatic device configuration run, an index of the device target topology must be set to the value of the device actual topology in r0098 for acknowledgement. An index of the device actual topology with a value other than 0 must be selected.

Refer to: p0097, r0098

Note:	The parameter can only be set to the values 0, the value of the actual device topology, the value of the actual device target topology and FFFFFFFF hex. If the value 0 is displayed in all of the indices, then the system has still not been commissioned. The value FFFFFFFF hex indicates that the topology was not generated by the automatic device configuration but was commissioned using the commissioning software (e.g. using parameter download).

p0100 IEC/NEMA mot stds / IEC/NEMA mot stds

VECTOR_G

Can be changed: C2(1)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Defines whether the motor and drive converter power settings (e.g. rated motor power, p0307) are expressed in [kW] or [hp].

Depending on the selection, the rated motor frequency (p0310) is either set to 50 Hz or 60 Hz.

For p0100 = 0, the following applies: The power factor (p0308) should be parameterized.

For p0100 = 1, the following applies: The efficiency (p0309) should be parameterized.

Value:
0: IEC-Motor (50 Hz, SI units)
1: NEMA motor (60 Hz, US units)

Dependency: If p0100 is changed, all of the rated motor parameters are reset. Only then are possible unit changeovers made.

The units of all motor parameters are changed that are involved in the selection of IEC or NEMA (e.g. r0206, p0307, p0316, r0333, r0334, p0341, p0344, r1493, r1969).

Refer to: r0206, p0210, p0300, p0304, p0305, p0307, p0308, p0309, p0310, p0311, p0314, p0320, p0322, p0323, p0335, r0336, r0337, p1800

Note: The parameter can only be changed for vector control (p0107).

The parameter value is not reset when the factory setting is restored (p0010 = 30, p0970).

p0101[0...n] Drive object numbers / DO numbers

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1(1)	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	62	0

Description: The parameter contains the object number via which every drive object can be addressed.

The number of an existing drive object is entered into each index.

Value = 0: No drive object is defined.

Note: The numbers are automatically allocated.

For the commissioning software, this object number cannot be entered using the expert list, but is automatically assigned when inserting an object.

r0102[0...1] Number of drive objects / DO count

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the number of existing or existing and prepared drive objects.

Index:
[0] = Existing drive objects
[1] = Existing and prepared drive objects

Dependency: Refer to: p0101

Note: The numbers of the drive objects are in p0101.

Index 0:

Displays the number of drive objects that have already been set up.

Index 1:

Displays the number of drive objects that have already been set up and, in addition, the drive objects that still have to be set up.

r0103 Application-specific view / Appl_spec view

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	-

Description: Displays the application-specific view of the individual drive object.

Dependency: Refer to: p0107, r0107

p0103[0...n] Application-specific view / Appl_spec view

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1(2)	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	999	0

Description: The application-specific view of an existing drive object is entered into each index.

The parameter cannot be changed.

Dependency: Refer to: p0107, r0107

Note: In the non-volatile memory, the application-specific views are defined in files with the following structure:

PDxxxyyy.ACX

xxx: Application-specific view (p0103)

yyy: Type of drive object (p0107)

Example:

PD052011.ACX

--> "011" stands for the drive object, type SERVO

--> "052" is the number of the view for this drive object

p0105 Activate/de-activate drive object / DO act/deact

B_INF, ENC, HUB, TB30, TM150, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	1

Description: Setting to activate/de-activate a drive object.

Value:
0: De-activate drive object
1: Activate drive object
2: Drive object de-activate and not present

Recommend.: After inserting all of the components of a drive object, before activating, first wait for Alarm A01316.

Dependency: When activating drive objects with the safety functions enabled, the following applies:

After reactivating, a warm restart (p0009 = 30, p0976 = 2, 3) or POWER ON should be carried out.

Refer to: r0106

Notice: The following applies when activating:

If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.

Note: Re value = 0, 2:

When a drive object is deactivated it no longer outputs any errors.

If value = 0:

All components of the drive object were completely commissioned and are deactivated using this value. They can be removed from the DRIVE-CLiQ without any error.

If a component has been deactivated, only the component with the correct serial number may be inserted, or none at all.

If value = 1:

All components of the drive object must be available for error-free operation.

If value = 2:

Components of a drive object in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the components are marked to be bypassed in the DRIVE-CLiQ line.

For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

p0105 Activate/de-activate drive object / DO act/deact

	0	5	3

Description: Pre-assignment of the sampling times in p0115.

The clock cycles for the current controller / speed controller / flux controller / setpoint channel / position controller / positioning / technology controller are pre-assigned as follows:

SINAMICS S, servo drive:

p0112 = 1: 250 / 250 / 250 / 4000 / 2000 / 8000 / 4000 µs (for chassis units)

p0112 = 2: 125 / 250 / 250 / 4000 / 2000 / 8000 / 4000 µs

p0112 = 3: 125 / 125 / 125 / 4000 / 1000 / 4000 / 4000 µs

p0112 = 4: 62.5 / 62.5 / 62.5 / 1000 / 1000 / 2000 / 1000 µs

p0112 = 5: 31.25 / 31.25 / 31.25 / 1000 / 1000 / 2000 / 1000 µs

SINAMICS S, Active Infeed (p0112 = 1 not for p0092 = 1):

p0112 = 1: 400 / - / - / 1600 µs (pre-setting for the rated pulse frequency = 2.5 kHz)

p0112 = 2: 250 / - / - / 2000 µs (pre-setting for the rated pulse frequency = 4.0 kHz)

p0112 = 3: 125 / - / - / 2000 µs

p0112 = 4: 125 / - / - / 1000 µs

p0112 = 5: 125 / - / - / 500 µs

SINAMICS S, Smart Infeed (p0112 = 1 not for p0092 = 1):

p0112 = 1: 400 / - / - / 1600 µs (pre-setting for the rated pulse frequency = 2.5 kHz)

p0112 = 2: 250 / - / - / 2000 µs (pre-setting for the rated pulse frequency = 4.0 kHz)

p0112 = 3: 250 / - / - / 2000 µs

p0112 = 4: 250 / - / - / 1000 µs

p0112 = 5: Not possible

SINAMICS S, Basic Infeed, booksize:

p0112 = 4: 250 / - / - / 2000 µs

SINAMICS S, Basic Infeed, chassis:

p0112 = 1: 2000 / - / - / 2000 µs

p0112 = 2: 2000 / - / - / 2000 µs (pre-setting)

p0112 = 3: 2000 / - / - / 2000 µs

p0112 = 4: Not possible

p0112 = 5: Not possible

SINAMICS S/G, vector drive (p0112 = 1 not for p0092 = 1 and not for PM340):

p0112 = 1: 400 / 1600 / 1600 / 1600 / 3200 / 3200 / 3200 µs (for rated pulse frequency = 1.25, 2.5 kHz)

p0112 = 2: 250 / 1000 / 2000 / 1000 / 2000 / 4000 / 4000 µs

p0112 = 3: 250 / 1000 / 1000 / 1000 / 2000 / 4000 / 4000 µs (for rated pulse frequency = 2.0, 4.0 kHz)

SINAMICS S, vector drive:

p0112 = 4: 250 / 500 / 1000 / 500 / 1000 / 2000 / 2000 µs

p0112 = 5: 250 / 250 / 1000 / 500 / 1000 / 2000 / 1000 µs

Value:
0: Expert
1: xLow
2: Low
3: Standard
4: High
5: xHigh

Recommend.: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Dependency: It is prohibited to select a parameter value from p0112 if the associated current controller clock cycle cannot set (e.g. p0112 = 1 is not possible for a vector drive and PM340 power unit).

If, for a servo drive, p112 = 5 is set, then the pulse frequency p1800 is preassigned 8 kHz. For D410-2 and vector drive, the current controller sampling time can only be permanently changed for p0112 = 0.

Refer to: p0092

Note: For p0112 = 0 (expert) the individual sampling times in p0115 can be adjusted.

The setting p0112 = 1 cannot be set for a vector drive with power unit type PM340 (refer to r0203).

---

p0112 Sampling times pre-setting p0115 / t_sample for p0115

VECTOR_G

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3

0	3	3

Description: Pre-assignment of the sampling times in p0115.

The clock cycles for the current controller / speed controller / flux controller / setpoint channel / position controller / positioning / technology controller are pre-assigned as follows:

SINAMICS S, servo drive:

p0112 = 1: 250 / 250 / 250 / 4000 / 2000 / 8000 / 4000 µs (for chassis units)

p0112 = 2: 125 / 250 / 250 / 4000 / 2000 / 8000 / 4000 µs

p0112 = 3: 125 / 125 / 125 / 4000 / 1000 / 4000 / 4000 µs

p0112 = 4: 62.5 / 62.5 / 62.5 / 1000 / 1000 / 2000 / 1000 µs

p0112 = 5: 31.25 / 31.25 / 31.25 / 1000 / 1000 / 2000 / 1000 µs

SINAMICS S, Active Infeed (p0112 = 1 not for p0092 = 1):

p0112 = 1: 400 / - / - / 1600 µs (pre-setting for the rated pulse frequency = 2.5 kHz)

p0112 = 2: 250 / - / - / 2000 µs (pre-setting for the rated pulse frequency = 4.0 kHz)

p0112 = 3: 125 / - / - / 2000 µs

p0112 = 4: 125 / - / - / 1000 µs

p0112 = 5: 125 / - / - / 500 µs

SINAMICS S, Smart Infeed (p0112 = 1 not for p0092 = 1):

p0112 = 1: 400 / - / - / 1600 µs (pre-setting for the rated pulse frequency = 2.5 kHz)

p0112 = 2: 250 / - / - / 2000 µs (pre-setting for the rated pulse frequency = 4.0 kHz)

p0112 = 3: 250 / - / - / 2000 µs

p0112 = 4: 250 / - / - / 1000 µs

p0112 = 5: Not possible

SINAMICS S, Basic Infeed, booksize:

p0112 = 4: 250 / - / - / 2000 µs

SINAMICS S, Basic Infeed, chassis:

p0112 = 1: 2000 / - / - / 2000 µs

p0112 = 2: 2000 / - / - / 2000 µs (pre-setting)

p0112 = 3: 2000 / - / - / 2000 µs

p0112 = 4: Not possible

p0112 = 5: Not possible

SINAMICS S/G, vector drive (p0112 = 1 not for p0092 = 1 and not for PM340):

p0112 = 1: 400 / 1600 / 1600 / 1600 / 3200 / 3200 / 3200 µs (for rated pulse frequency = 1.25, 2.5 kHz)

p0112 = 2: 250 / 1000 / 2000 / 1000 / 2000 / 4000 / 4000 µs

p0112 = 3: 250 / 1000 / 1000 / 1000 / 2000 / 4000 / 4000 µs (for rated pulse frequency = 2.0, 4.0 kHz)

SINAMICS S, vector drive:

p0112 = 4: 250 / 500 / 1000 / 500 / 1000 / 2000 / 2000 µs

p0112 = 5: 250 / 250 / 1000 / 500 / 1000 / 2000 / 1000 µs

Value:

0: Expert
1: xLow
2: Low
3: Standard

Recommend.: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Dependency: It is prohibited to select a parameter value from p0112 if the associated current controller clock cycle cannot set (e.g. p0112 = 1 is not possible for a vector drive and PM340 power unit).

If, for a servo drive, p112 = 5 is set, then the pulse frequency p1800 is preassigned 8 kHz. For D410-2 and vector drive, the current controller sampling time can only be permanently changed for p0112 = 0.

Refer to: p0092

Note: For p0112 = 0 (expert) the individual sampling times in p0115 can be adjusted.

The setting p0112 = 1 cannot be set for a vector drive with power unit type PM340 (refer to r0203).

p0113 Minimum pulse frequency, selection / f_puls min sel

VECTOR_G

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.000 [kHz]	2.000 [kHz]	2.000 [kHz]

Description: The current controller sampling time (p0115[0]) is pre-assigned by selecting the minimum pulse frequency.

Dependency: The parameter can only be changed with p0112 = 0 (expert). For isochronous operation (p0092 = 1) the parameter can only be set so that a current controller sampling time of 125 µs is obtained as an integer number.

The required pulse frequency can be set in p1800 after commissioning (p0009 = p0010 = 0), assuming that this has not been restricted by other conditions (e.g. as a result of p1082, p0310).

Refer to: p0112, r0114, p0115, p1800

Note: The current controller sampling time (p0115[0]) is set to the inverse value of twice the minimum pulse frequency. For p0113 = 1.0 kHz, p0115[0] = 500 µs is set, for p0113 = 2.0 kHz, p0115[0] = 250 µs is set. The current controller sampling time (p0115[0]), calculated from the pulse frequency, is set in a grid of 1.25 µs.

For a power unit type PM340 (refer to r0203), only the values 1.0 and 2.0 kHz can be set. A value of 1.0 kHz can be set in order to achieve a current controller sampling time of 500µs. However, in this case, the minimum pulse frequency p1800 is limited to 2 kHz.

r0114[0...9] Minimum pulse frequency recommended / f_puls min recom

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kHz]	- [kHz]	- [kHz]

Description: Displays the recommended values (indices 0 and 1) for the minimum pulse frequency (p0113).

If the system rejects a change to p0113 because the value to be used lies outside the permitted value range, then instead the recommended value from r0114 can be used.

Index:
[0] = If only the actual drive is changed
[1] = If all drives connected to the DRIVE-CLiQ line are changed
[2] = 2. possible pulse frequency
[3] = 3. possible pulse frequency
[4] = 4. possible pulse frequency
[5] = 5. possible pulse frequency
[6] = 6. possible pulse frequency
[7] = 7. possible pulse frequency
[8] = 8. possible pulse frequency
[9] = 9. possible pulse frequency

Dependency: Refer to: p0113

Note: After exiting commissioning (p0009 = p0010 = 0), the pulse frequencies calculated from the sampling time p115[0] are displayed in indices 1 to 9. If additional restrictions do not apply (e.g. due to having selected an output filter), these can be entered into p1800. The maximum pulse frequency of the power units was already taken into account in r0114.

A value of 0 kHz does not define a recommended pulse frequency.

p0115[0...6] **Sampling times for internal control loops / t_sample int ctrl**

B_INF

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [µs]	16000.00 [µs]	[0] 125.00 [µs] [1] 125.00 [µs] [2] 125.00 [µs] [3] 4000.00 [µs] [4] 1000.00 [µs] [5] 4000.00 [µs] [6] 4000.00 [µs]

Description: Sets the sampling times for the control loops.

The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).

Recommend.: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Index:
[0] = Current controller
[1] = Speed controller
[2] = Flux controller
[3] = Setpoint channel
[4] = Pos controller
[5] = Positioning
[6] = Techn controller

Dependency: The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms.

Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. p0115[1] = N * p0115[0]; where N is an integer number). The sampling time of the speed controller (p0115[1]) can have as a maximum a value of 800% of the current controller sampling time (p0115[0]).

For servo drives, the maximum sampling time of the current controller is 250 µs and for vector drives, 500 µs.

The sampling times for setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) must have at least 2x the value of the current controller sampling time (p0115[0]).

Refer to: r0110, r0111, p0112

Note: For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned.

For the Active Line Module (ALM) and Smart Line Module (SLM), the current and DC link voltage controllers operate with the same sampling time. For ALM/SLM the maximum current controller clock cycle is 400 µs.

For the Basic Line Module (BLM), the DC link voltage measurement operates in the current controller sampling time.

For BLM booksize, only the current controller sampling time of 250 µs is permitted. For BLM chassis, only the current controller sampling time of 2000 µs is permitted.

For power unit type PM340 (r0203), only current controller sampling times of 62.5 µs, 125 µs, 250 µs and 500 µs can be set. The maximum current controller clock cycle for servo drives and the minimum current controller clock cycle for vector drives is 250 µs.

If sampling times in p0115 are individually changed for p0112 = 0 (expert) then it must always be observed that the selected sampling times of the setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) are always greater than or equal to twice the current controller sampling time (p0115[0]).

p0115[0]	Sampling time for supplementary functions / t_samp suppl_fct		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** C1(3)	**Calculated:** -	**Access level:** 3

	Min	**Max**	**Factory setting**
	0.00 [µs]	16000.00 [µs]	4000.00 [µs]

Description: Sets the sampling times for supplementary functions (DCC, free function blocks) on this object.
Only setting values that are an integer multiple of 125 µs are permissible.

Index: [0] = Basic sampl time

Note: This parameter only applies to set the sampling times of possible supplementary functions.
The sampling times for inputs/outputs must be set in p4099.

p0115[0...6]	Sampling times for internal control loops / t_sample int ctrl		
VECTOR_G	**Can be changed:** C1(3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [µs]	16000.00 [µs]	[0] 250.00 [µs] [1] 1000.00 [µs] [2] 1000.00 [µs] [3] 1000.00 [µs] [4] 2000.00 [µs] [5] 4000.00 [µs] [6] 4000.00 [µs]

Description: Sets the sampling times for the control loops.
The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).

Recommend.: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

When adjusting the current controller sampling time, it is recommended to use values that are an integer multiple of 6.25 µs. The sampling times of analog or digital inputs/outputs (see p0799, p4099) should be set to an integer multiple of the current controller sampling time.

If the current controller sampling time is to be reduced with respect to the default setting (e.g. < 250 µs), then it is recommended that the motor data identification (standstill measurement) is executed beforehand, in order to avoid a thermal overload of the power unit as a result of high pulse frequencies (p1800).

Index: [0] = Current controller
[1] = Speed controller
[2] = Flux controller
[3] = Setpoint channel
[4] = Pos controller
[5] = Positioning
[6] = Techn controller

Dependency: Depending on the number and type of vector drives, the sampling times are preset differently.

The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms.

Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. p0115[1] = N * p0115[0]; where N is an integer number). The sampling time of the speed controller (p0115[1]) can have as a maximum a value of 800% of the current controller sampling time (p0115[0]).

The sampling times for setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) must have at least 2x the value of the current controller sampling time (p0115[0]).

The sampling time of the current controller p0115[0] and pulse frequency p1800 are checked at each parameter download, and when necessary changed, if, for p0092 = 1, the current controller sampling time is not an integral multiple of 125 µs or if p0112 is set > 1. For p0092 = 0, the check with p0112 = 0 (= expert) can be deactivated.

Refer to: r0110, r0111, p0112

Note: For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned.

For power unit type PM340 (r0203), only current controller sampling times of 250 µs or 500 µs can be set. The minimum current controller clock cycle is otherwise 125 µs (SINAMICS G: 250 µs), the maximum current controller clock cycle is 500 µs. The minimum speed controller clock cycle for SINAMICS G is 1 ms.

Current controller clock cycles less than 250 µs are restricted by the number of drives or by the number of power units connected in parallel (also see F01340).

For chassis power units connected in parallel, it is recommended to connect the DRIVE-CLiQ cables (partially) in parallel between the Control Unit and the individual Motor Modules.

For D410-2, the current controller sampling times can only be permanently changed with p0112 = 0 (e.g. to 250 µs).

r0116[0...1] Drive object clock cycle recommended / DO_clock recom

B_INF, CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, TB30, TM31, VECTOR_G

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [µs]	- [µs]	- [µs]

Description: Displays the recommended sampling time for the drive objects.

r00116[0] = recommended sampling time:

Recommended value which would then make the complete system operational.

r00116[1] = recommended sampling time:

Recommended value, which after changing other clock cycles on the DRIVE-CLiQ line, would result in an operational system.

Index: [0] = Change only for the actual drive object
[1] = Changing all objects on the DRIVE-CLiQ line

Dependency: Refer to: p0115

p0117	Current controller computing dead time mode / I_ctrl t_dead mode		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	6	6

Description: Sets the mode for the computing dead time of the current controller.

0: Offset (shifted) clocking, minimum computing dead time of each drive, automatic setting

1: Clocking at the same time, the dead time aligns itself to the dead time of the latest drive, automatic setting

2: Manual setting of the computing dead time, early transfer

3: Manual setting of the computing dead time, late transfer

4-6: As for 0-2, however, no early transfers are set for vectors

Dependency: Refer to: p0118

Note: The mode change is not effective until the drive unit is powered up again.

Re p0117 = 0:

The times when the setpoints become effective for the individual controls is automatically and individually determined. Another computing dead time is set for each control (closed-loop) (p0118). Current is impressed for the individual controls without any offset with respect to time (improved EMC compatibility).

Re p0117 = 1:

The latest closed-loop control determines when the setpoints for each of the individual controls become active. The same computing dead time is set for each control (p0118). Current is impressed (flows) for the individual controls without any offset with respect to time.

Re p0117 = 2:

The computing dead time is manually set. The user must optimize the value in p0118.

Re p0117 = 3:

The computing dead time is manually set. The user must optimize the value in p0118.

Re p0117 = 4 ... 6:

Behavior as for p0117 = 0 ... 2, however for vectors, the earliest times are not determined.

p0118	Current controller computing dead time / I_ctrl t_dead		
B_INF, VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

Min	**Max**	**Factory setting**
0	1	0

Description: Detection of the main components of the drive object selected via the index.

p0125[0...n] Activate/de-activate power unit components / PU_comp act/deact

B_INF, VECTOR_G

Can be changed: C1(4), T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	1

Description: Setting to activate/de-activate a power unit component.

Value:
0: De-activate component
1: Activate component
2: Component de-activate and not present

Recommend.: After inserting a component, before activating, first wait for Alarm A01317.

Dependency: Refer to: r0126

Caution: For a parallel connection, the following applies:
When deactivating individual power units using p0125, it is not permissible that the power units of the parallel connection involved are connected. Infeed units should be disconnected from the line supply (for example, using a contactor). Motor feeder cables should be disconnected. In addition, defective power units should be disconnected from the DC link.

Notice: It is not permissible to de-activate drive objects with safety functions enabled.

Note: The activation of a component can be rejected if the component was inserted for the first time. In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited.

For units connected in parallel, when one of the power units is de-activated, then the enable in p7001 is withdrawn.

Re value = 0, 2:

When a component is deactivated it no longer outputs any errors.

If value = 0:

The component was completely commissioned and is deactivated using this value. It can be removed from the DRIVE-CLiQ without any error.

If value = 1:

The component must be available for error-free operation.

If value = 2:

A component in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the component is marked to be bypassed in the DRIVE-CLiQ line.

For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

r0126[0...n] Power unit components active/inactive / PU comp act/inact

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	-

Description: Displays the "active/inactive" state of a power unit component.

Value:
0: Component inactive
1: Component active

Dependency: Refer to: p0105, p0125, p0897

r0127[0...n] Power unit EEPROM data version / PU EEPROM version

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the version of the EEPROM data of the power unit.

Dependency: Refer to: r0147, r0157

Note: For parallel circuit configurations, the parameter index is assigned to a power unit.

r0128[0...n] Power unit firmware version / PU FW version

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the firmware version of the power unit.

Dependency: Refer to: r0018, r0148, r0158, r0197, r0198

Note: Example:

The value 1010100 should be interpreted as V01.01.01.00.

For parallel circuit configurations, the parameter index is assigned to a power unit.

p0130 Number of Motor Data Sets (MDS) / MDS count

VECTOR_G

Can be changed: C1(3)	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 8575
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	16	1

Description: Sets the number of Motor Data Sets (MDS).

p0131[0...n] Motor component number / Mot comp_no

VECTOR_G

Can be changed: C1(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	199	0

Description: The motor data set is assigned to a motor using this parameter.

This unique component number is assigned when parameterizing the topology.

Only component numbers can be entered into this parameter that correspond to a motor.

p0133[0...n] Motor configuration / Motor config

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Configuration of the motor when commissioning the motor.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Motor connection type	Delta	Star	-

Dependency: For standard induction motors (p0301 > 10000), bit 0 is automatically preassigned the connection type of the selected data set.

For p0100 > 0 (60 Hz rated motor frequency), it is not possible to select bit 1.

Refer to: p0304, p0305

Note: Re bit 00:

When changing the bits, the rated motor voltage p0304 and the rated motor current p0305 are automatically converted to the selected connection type (star/delta).

For instance, this can be necessary if an 1LE1 motor is selected using the order number (MLFB) or code number (p0300 = 100, p0301 = 1x0xx), and the motor connection type does not correspond to that of the data set.

p0139[0...2] Copy Motor Data Set MDS / Copy MDS

VECTOR_G

Can be changed: C2(15)	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 8575
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	31	0

Description: Copying a Motor Data Set (MDS) into another.

Index:
[0] = Source motor data set
[1] = Target motor data set
[2] = Start copying procedure

Note: Procedure:
1. In Index 0, enter which motor data set should be copied.
2. In Index 1, enter the motor data set data that is to be copied into.
3. Start copying: Set index 2 from 0 to 1.

p0139[2] is automatically set to 0 when copying is completed.
When copying, p0131 is not taken into account.

p0140 Number of Encoder Data Sets (EDS) / EDS count

ENC

Can be changed: C1(3)	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 8570
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	1	1

Description: Sets the number of Encoder Data Sets (EDS).

Note: When parameterizing the drive with "no encoder" there must be at least one encoder data set (p0140 >= 1).

p0140 Number of Encoder Data Sets (EDS) / EDS count

VECTOR_G

Can be changed: C1(3)	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 8570
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	16	1

Description: Sets the number of Encoder Data Sets (EDS).

Note: When parameterizing the drive with "no encoder" there must be at least one encoder data set (p0140 >= 1).

p0141[0...n] Encoder interface (Sensor Module) component number / Enc_interf comp_no

ENC, VECTOR_G

Can be changed: C1(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704, 8570
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	199	0

Description: This parameter is used to assign the encoder data set to an encoder evaluation (e.g. SMC).
This unique component number is assigned when parameterizing the topology.
Only a component number can be entered that corresponds to an encoder evaluation.

Note: If the encoder evaluation and encoder are integrated (motor with DRIVE-CLiQ), then their component numbers are identical.
For an SMC, different component numbers are assigned for the SMC (p0141) and the (actual) encoder (p0142).
SMC: Sensor Module Cabinet

p0142[0...n] Encoder component number / Encoder comp_no

ENC, VECTOR_G

Can be changed: C1(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	199	0

Description: This parameter is used to assign the encoder data set to an encoder.
This assignment is made using the unique component number that was assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to an encoder.

Note: If the encoder evaluation and encoder are integrated (motor with DRIVE-CLiQ), then their component numbers are identical.
For an SMC, different component numbers are assigned for the SMC (p0141) and the (actual) encoder (p0142).

p0144[0...n] Sensor Module detection via LED / SM detection LED

ENC, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Detects the Sensor Module assigned to this drive and data set.

Note: While p0144 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate Sensor Module.

p0145[0...n] Activate/de-activate encoder interface / Enc_intf act/deact

ENC, VECTOR_G

Can be changed: C1(4), U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	1

Description: Setting to activate/de-activate an encoder interface (Sensor Module).

Value:
0: De-activate component
1: Activate component
2: Component de-activate and not present

Recommend.: After inserting a component, before activating, first wait for Alarm A01317.

Dependency: Refer to: r0146

Note: The de-activation of an encoder interface corresponds to the"parking encoder" function and has the same effect.

The activation of a component can be rejected if the component was inserted for the first time.

In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited.

With the encoder interface for encoder 1 (motor encoder), the relevant drive object for writing the parameter must be in the "Ready for operation" state.

With the encoder interface for encoders 2 and 3, the parameter can also be written during operation.

Re value = 0, 2:

When a component is deactivated it no longer outputs any errors.

If value = 0:

The component was completely commissioned and is deactivated using this value. It can be removed from the DRIVE-CLiQ without any error.

If value = 1:

The component must be available for error-free operation.

If value = 2:

A component in a project generated offline and set to this value must never be inserted in the actual topology from the very start.

For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

r0146[0...n] Encoder interface active/inactive / Enc_intf act/inact

ENC, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	-

Description: Displays the "active" or "inactive" state of an encoder interface (Sensor Module).

Value: 0: Component inactive
1: Component active

Dependency: Refer to: p0105, p0145, p0480, p0897

r0147[0...n] Sensor Module EEPROM data version / SM EEPROM version

ENC, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the version of the EEPROM data of the Sensor Module.

Dependency: Refer to: r0127, r0157

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0148[0...n] Sensor Module firmware version / SM FW version

ENC, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the firmware version of the Sensor Module.

Dependency: Refer to: r0018, r0128, r0158, r0197, r0198

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

p0150 Number of VSM data sets / VSM dat_sets qty.

VECTOR_G

Can be changed: C1(3)	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	1

Description: Sets the number of VSM data sets.

p0151[0...1] DRIVE-CLiQ Hub Module component number / Hub comp_no

HUB

Can be changed: C1(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	199	0

Description: This parameter is used to assign the data set to a DRIVE-CLiQ Hub Module.
This unique component number is assigned when parameterizing the topology.
Only the numbers of components operated as hubs can be entered in these parameters.
[0] = DRIVE-CLiQ node 1
[1] = DRIVE-CLiQ node 2

p0151	Terminal Module component number / TM comp_no		
TM150, TM31, TM54F_MA, TM54F_SL	**Can be changed:** C1(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Data sets	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	199	0

Description: Sets the component number for the Terminal Module.
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to a Terminal Module.

p0151[0...n]	Voltage Sensing Module component number / VSM comp_no		
VECTOR_G	**Can be changed:** C1(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** p0150	**Func. diagram:** -
	P-Group: Data sets	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	199	0

Description: The VSM data set is assigned to a VSM evaluation using this parameter.

Note: If two VSM are connected at the Motor Module, then the first (p0151[0]) is assigned to the line voltage measurement (see p3801) and the second, to the motor voltage measurement (see p1200).

p0154	DRIVE-CLiQ Hub Module detection via LED / Hub detection LED		
HUB	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Detects any DRIVE-CLiQ Hub Module that has been assigned.

p0154	Terminal Module detection via LED / TM detection LED		
TM150, TM31, TM54F_MA, TM54F_SL	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Terminals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Detects the Terminal Module assigned to this drive and data set.

Note: While p0154 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate Terminal Module.

p0155[0...n]	Voltage Sensing Module activate/de-activate / VSM act/deact		
VECTOR_G	**Can be changed:** C1(4), T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** p0150	**Func. diagram:** -
	P-Group: Data sets	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	2	1

Description: Setting to activate/de-activate a Voltage Sensing Module (VSM).

Value:
0: De-activate component
1: Activate component
2: Component de-activate and not present

Recommend.: After inserting a component, before activating, first wait for Alarm A01317.
Dependency: Refer to: r0156

r0156[0...n] Voltage Sensing Module active/inactive / VSM act/inact

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** p0150	**Func. diagram:** -
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	-

Description: Displays the "active" or "inactive" state of a Voltage Sensing Module (VSM).
Value:
0: Component inactive
1: Component active
Dependency: Refer to: p0155

r0157 DRIVE-CLiQ Hub Module EEPROM data version / Hub EEPROM version

HUB

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the version of the EEPROM data for the DRIVE-CLiQ Hub Module.
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0157 Terminal Module EEPROM data version / TM EEPROM version

TM150, TM31, TM54F_MA, TM54F_SL

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the version of the EEPROM data of the Terminal Module.
Dependency: Refer to: r0127, r0147
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0157[0...n] Voltage Sensing Module EEPROM data version / VSM EEPROM version

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** p0150	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the version of the EEPROM data of the Voltage Sensing Module (VSM).
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0158	DRIVE-CLiQ Hub Module firmware version / Hub FW version		
HUB	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Terminals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the firmware version of the DRIVE-CLiQ Hub Module.

r0158	Terminal Module firmware version / TM FW version		
TM150, TM31, TM54F_MA, TM54F_SL	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Terminals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the firmware version of the Terminal Module.

Dependency: Refer to: r0018, r0128, r0148, r0197, r0198

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0158[0...n]	Voltage Sensing Module firmware version / VSM FW version		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** p0150	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the firmware version of the Voltage Sensing Module (VSM).

Dependency: Refer to: r0018, r0128, r0197, r0198

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

p0161	Option board component number / Opt board comp_no		
TB30	**Can be changed:** C1(4)	**Calculated:** -	**Access level:** 4
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Data sets	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	199	0

Description: Sets the component number for the option board (e.g. Terminal Board 30).
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to an option board.

p0170	**Number of Command Data Sets (CDS) / CDS count**		
B_INF	**Can be changed:** C1(3)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	2	1

Description: Sets the number of Command Data Sets (CDS).

Note: It is possible to toggle between command parameters (BICO parameters) using this data set changeover.

p0170	**Number of Command Data Sets (CDS) / CDS count**		
VECTOR_G	**Can be changed:** C1(3)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	2	4	2

Description: Sets the number of Command Data Sets (CDS).

Note: It is possible to toggle between command parameters (BICO parameters) using this data set changeover.

p0180	**Number of Drive Data Sets (DDS) / DDS count**		
VECTOR_G	**Can be changed:** C1(3)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 8565
	P-Group: Data sets	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	32	1

Description: Sets the number of Drive Data Sets (DDS).

p0186[0...n]	**Motor Data Sets (MDS) number / MDS number**		
VECTOR_G	**Can be changed:** C1(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Func. diagram:** 8575
	P-Group: Data sets	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	15	0

Description: Using the parameter, each Drive Data Set (= index) is assigned the associated Motor Data Set (MDS).
The parameter value therefore corresponds to the number of the assigned motor data set.

p0187[0...n]	**Encoder 1 encoder data set number / Enc 1 EDS number**		
VECTOR_G	**Can be changed:** C1(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Func. diagram:** 4700, 8570
	P-Group: Data sets	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	99	99

Description: Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 1.
The value corresponds to the number of the assigned encoder data set.
Example:
Encoder data set 0 should be assigned to encoder 1 in drive data set 2.
--> p0187[2] = 0

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

p0188[0...n] Encoder 2 encoder data set number / Enc 2 EDS number

VECTOR_G

Can be changed: C1(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Func. diagram:** 4700, 8570
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	99	99

Description: Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 2.
The value corresponds to the number of the assigned encoder data set.
Example:
Encoder data set 1 should be assigned to encoder 2 in drive data set 2.
--> p0188[2] = 1

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

p0189[0...n] Encoder 3 encoder data set number / Enc 3 EDS number

VECTOR_G

Can be changed: C1(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Func. diagram:** 4700, 8570
P-Group: Data sets	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	99	99

Description: Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 3.
The value corresponds to the number of the assigned encoder data set.

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

r0192 Power unit firmware properties 1 / PU FW property 1

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3

25	Internal fan operating hours counter available	Yes	No	-
26	Software gating unit supported in the Control Unit	Yes	No	-
27	Current controller dynamics higher	Yes	No	-
28	Reserved			-
29	Voltage measurement	Yes	No	-
30	Gating unit with all-phase current limiting	Yes	No	-

Dependency: Refer to: r0193

Notice: This information represents the characteristics/features of the power unit firmware. It does not provide information/data about the characteristics/features of the hardware (e.g. bit 06 = 1 means that although the firmware supports "liquid cooling", a power unit with liquid cooling does not have to be used).

Note: Re bit 09:

The Motor Module supports the internal armature short-circuit. The function is internally required for voltage protection (p1231 = 3).

Re bit 10:

The Motor Module supports the autonomous internal voltage protection.

If the "internal voltage protection" function is activated (p1231 = 3) the Motor Module decides autonomously - using the DC link voltage - as to whether the short-circuit is activated.

Re bit 23:

The component supports the detection of current actual values (and the detection of valve close durations) with double clocking and phase shift.

r0193 Power unit firmware properties 2 / PU FW property 2

B_INF, VECTOR_G

Note: Re bit 03 ... 00:

Bit 3, 2, 1, 0 = 0, 0, 0, 0 --> component not available.

Bit 3, 2, 1, 0 = 0, 0, 0, 1 --> power-up, non-cyclic DRIVE-CLiQ communication (LED = orange).

Bit 3, 2, 1, 0 = 0, 0, 1, 0 --> operating mode, cyclic DRIVE-CLiQ communication (LED = green).

Bit 3, 2, 1, 0 = 0, 0, 1, 1 --> alarm (LED = green).

Bit 3, 2, 1, 0 = 0, 1, 0, 0 --> fault (LED = red).

Bit 3, 2, 1, 0 = 0, 1, 0, 1 --> detection via LED and operating mode (LED = green/orange).

Bit 3, 2, 1, 0 = 0, 1, 1, 0 --> detection via LED and alarm (LED = green/orange).

Bit 3, 2, 1, 0 = 0, 1, 1, 1 --> detection via LED and fault (LED = red/orange).

Bit 3, 2, 1, 0 = 1, 0, 0, 0 --> firmware being downloaded (LED = green/red with 0.5 Hz).

Bit 3, 2, 1, 0 = 1, 0, 0, 1 --> firmware download completed, wait for POWER ON (LED = green/red with 2.0 Hz).

Re bits 12 ... 11:

These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.

r0197[0...1] Bootloader version / Bootloader vers

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the bootloader version.

Index 0:

Displays the bootloader version.

Index 1:

Displays the bootloader version 3 (for CU320-2 and CU310-2)

Value 0 means that boot loader 3 is not available.

Dependency: Refer to: r0018, r0128, r0148, r0158, r0198

Note: Example:

The value 1010100 should be interpreted as V01.01.01.00.

---

r0198[0...2] BIOS/EEPROM data version / BIOS/EEPROM vers

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the BIOS and EEPROM data version.

r0198[0]: BIOS version

r0198[1]: EEPROM data version EEPROM 0

r0198[2]: EEPROM data version EEPROM 1

Dependency: Refer to: r0018, r0128, r0148, r0158, r0197

Note: Example:

The value 1010100 should be interpreted as V01.01.01.00.

---

p0199[0...24] Drive object name / DO name

All objects

Can be changed: C1	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Freely assignable name for a drive object.

In the commissioning software, this name cannot be entered using the expert list, but is specified in the configuration assistant. The object name can be subsequently modified in the Project Navigator using standard Windows resources.

Note: The parameter is not influenced by setting the factory setting.

---

r0200[0...n] Power unit code number actual / PU code no. act

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the unique code number of the power unit.

Note: r0200 = p0201: No power unit found

For parallel circuit configurations, the parameter index is assigned to a power unit.

---

p0201[0...n] Power unit code number / PU code no

B_INF

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the actual code number from r0200 to acknowledge the power unit being used.

When commissioned for the first time, the code number is automatically transferred from r0200 into p0201.

Note: The parameter is used to identify when the drive is being commissioned for the first time.

The power unit commissioning can only be exited (p0201 = r0200), if the actual and acknowledged code numbers are identical (p0010 = 2).

For parallel circuit configurations, the parameter index is assigned to a power unit.

p0201[0...n] Power unit code number / PU code no

VECTOR_G

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the actual code number from r0200 to acknowledge the power unit being used.

When commissioned for the first time, the code number is automatically transferred from r0200 into p0201.

Notice: When p0201 = 10000, the rated power unit data is reloaded and dependent parameters are set (e.g. p0205, p0210, p0230, p0857, p1800). p0201 is then automatically assigned the value of r0200 if the code number of the power unit could be read. A warm start must be performed after this procedure (automatically if necessary).

Note: The parameter is used to identify when the drive is being commissioned for the first time.

The power unit commissioning can only be exited (p0201 = r0200), if the actual and acknowledged code numbers are identical (p0010 = 2). However, if the comparator in p9906 or p9908 is at 2 (low) or 3 (minimum), the power unit commissioning is automatically set to p0201 = r0200 upon exiting.

When the code number is changed, the connection voltage (p0210) is checked and, if necessary, adjusted.

For parallel circuit configurations, the parameter index is assigned to a power unit.

r0203[0...n] Actual power unit type / PU actual type

p0205 Power unit application / PU application

VECTOR_G

Can be changed: C2(1, 2)	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	7	6

Description: Overloading the load duty cycles applies under the prerequisite that before and after the overload, the drive converter is operated with its base load current - in this case, a load duty cycle of 300 s is used as basis.

For booksize drive units, the following applies:

Only the setting p0205 = 0 can be selected. In this particular case, the base load current has a load duty cycle of 150 % for 60 s and 176 % for 30 s.

For chassis units, the following applies:

The base load current for a low overload condition is based on a load duty cycle 110 % for 60 s and 150 % for 10 s.

The base load current for a high overload condition is based on a load duty cycle 150 % for 60 s and 160 % for 10 s.

Value:
0: Load duty cycle with high overload for vector drives
1: Load duty cycle with low overload for vector drives
6: S1 duty cycle for servo drives (feed drive)
7: S6 duty cycle for servo drives (spindle drive)

Note: When the parameter is changed, all of the motor parameters and the control mode are pre-assigned according to the selected application.

The parameter has no influence when calculating the thermal overload.

p0205 can only be changed to the settings that are saved in the power unit EEPROM.

The parameter value is not reset when the factory setting is restored (see p0010 = 30, p0970).

r0206[0...4] Rated power unit power / PU P_rated

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the rated power unit power for various load duty cycles.

Index:
[0] = Rated value
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 cont duty cyc
[4] = S6 load duty cycle

Dependency: Refer to: p0205

r0208 Rated power unit line supply voltage / PU U_rated

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the rated line supply voltage of the power unit.

r0208 = 400 : 380 - 480 V +/-10 %

r0208 = 500 : 500 - 600 V +/-10 %

r0208 = 690 : 660 - 690 V +/-10 %

For the Basic Line Module (BLM) the following applies:

r0208 = 690 : 500 - 690 V +/-10 %

r0209[0...4] Power unit maximum current / PU I_max

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8750, 8850, 8950
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the maximum output current of the power unit.

Index:
[0] = Catalog
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 load duty cycle
[4] = S6 load duty cycle

Dependency: Refer to: p0205

p0210	**Drive unit line supply voltage / V_connect**		
B_INF	**Can be changed:** C2(1)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8760
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	70 [Vrms]	1000 [Vrms]	400 [Vrms]

Description: Sets the drive unit supply voltage (3-ph. AC).

The value corresponds to the rms value of the phase-to-phase rated line supply voltage.

Dependency: The parameter can be reduced to p0210 = 70 V if p0212.0 is set.

Notice: When connected to 3-ph. 230 V AC (only booksize units) the following must be observed:

- the undervoltage and overvoltage limits change (r0296, r0297).

- when using the internal braking chopper of Basic Line Modules (20 or 40 kW) the threshold when the braking chopper becomes active is reduced to 385 V. When using an external braking chopper, it must be ensured that a suitable activation threshold is used.

- all of the components connected to this DC link must also be adapted to the low line supply voltage. It is especially important that the rated DC voltage of all of the drives connected to this DC link is set with p0210 (e.g. p0210(SERVO) = 1.35 x p0210(B_INF) = 310 V).

- it is not possible to use a Control Supply Module (CSM) to generate a 24 V supply from the DC link, as the minimum continuous DC link voltage should not be below 430 V.

Note: The supply voltage range depends on the voltage class of the power unit.

400 V chassis units: 380 V <= p0210 <= 480 V

690 V chassis units: 500 V <= p0210 <= 690 V

400 V booksize units can also be connected to 3-ph. 230 V AC:

400 V booksize units: 180 V <= p0210 <= 480 V

A reduced supply voltage up to 70 V is possible if p0212.0 = 1 has been set.

p0210	**Drive unit line supply voltage / V_connect**		
VECTOR_G	**Can be changed:** C2(2), T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1 [V]	63000 [V]	600 [V]

Description: Sets the drive unit supply voltage.

AC/AC unit: The rms value of the phase-to-phase line supply voltage should be entered.

DC/AC unit: The rated DC voltage of the connection busbar should be entered.

Dependency: Set p1254, p1294 (automatic detection of the Vdc switch-on levels) = 0.

The switch-in thresholds of the Vdc_max controller (r1242, r1282) are then directly determined using p0210.

The parameter can be reduced to p0210 = 100 V if p0212.0 = 1 has been set.

Refer to: p0212

Notice: If, in the switched-off state (pulse inhibit), the supply voltage is higher than the entered value, the Vdc controller may be automatically de-activated in some cases to prevent the motor from accelerating the next time the system is switched on. In this case, an appropriate alarm A07401 is output.

Note: Setting ranges for p0210 as a function of the rated power unit voltage:

U_rated = 400 V:

- p0210 = 380 ... 480 V (AC/AC), 510 ... 720 V (DC/AC)

U_rated = 500 V:

- p0210 = 500 ... 600 V (AC/AC), 675 ... 900 V (DC/AC)

U_rated = 660 ... 690 V:

- p0210 = 660 ... 690 V (AC/AC), 890 ... 1035 V (DC/AC)

U_rated = 500 ... 690 V:

- p0210 = 500 ... 690 V (AC/AC), 675 ... 1035 V (DC/AC)

The pre-charging switch-in threshold for the DC link voltage (Vdc) is calculated from p0210:

Vdc_pre = p0210 * 0.82 * 1.35 (AC/AC)

Vdc_pre = p0210 * 0.82 (DC/AC)

The undervoltage thresholds for the DC link voltage (Vdc) are calculated from p0210 as a function of the rated power unit voltage:

U_rated = 400 V:

- U_min = p0210 * 0.78 (AC/AC) > 330 V, p0210 * 0.60 (DC/AC) > 380 V

U_rated = 500 V:

- U_min = p0210 * 0.76 (AC/AC) > 410 V

U_rated = 660 ... 690 V:

- U_min = p0210 * 0.82 (AC/AC) > 565 V, p0210 * 0.63 (DC/AC) > 650 V

U_rated = 500 ... 690 V:

- U_min = p0210 * 0.82 (AC/AC) > 420 V, p0210 * 0.63 (DC/AC) > 480 V

p0212 Power unit configuration / PU config

B_INF

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 bin

Description: Sets the power unit configuration.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Drive unit line supply voltage reduced	Yes	No	-
02	Supply voltage tolerance range extended	Yes	No	-
05	Contactor display inputs/outputs status	Yes	No	9814

Dependency: Re bit 00:

Reduced supply voltages are only possible on booksize power units.

Bit 0 = 1 can only be set if r0192.22 = 1.

Refer to: r0192, p0210

Caution: Re bit 00:

Working with reduced input voltages de-activates undervoltage detection.

This function may only be used by personnel with expert knowledge!

Re bit 03:

If the automatic setting of the Vdc max limit is deactivated, then all of the components connected to the DC link must be suitable for the maximum DC link voltage of the power unit (e.g. 820 V for 400 V units).

Note: Re bit 00 = 0:

It is not possible to reduce the supply voltage in p0210 to below 180 V.

Re bit 00 = 1:

With this setting the supply voltage in p0210 can be reduced to 70 V. Bit 0 = 1 can only be set for booksize power units with a rated power of up to 40 kW.

The activation of this function is retentively saved in the unit and for incorrect design of the application can result in loss of warranty!

Re bit 05 = 1:

The status of the inputs/outputs for the power unit contactors is displayed in r0256.

This only applies to chassis power units with 3 AC line connection and line contactors.

The status display is only effective after parameter save and POWER ON.

p0212 Power unit configuration / PU config

VECTOR_G	Can be changed: C2(2)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	**Max**	**Factory setting**
	-	-	0000 0000 bin

Description: Sets the power unit configuration.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Drive unit line supply voltage reduced	Yes	No	-
01	External pre-charging present	Yes	No	-
03	Automatically adapt Vdc_max limit	No	Yes	-
05	Contactor display inputs/outputs status	Yes	No	9814

Dependency: Re bit 00:

Reduced supply voltages are only possible for booksize and chassis power units (DC/AC).

Bit 0 = 1 can only be set if r0192.22 = 1.

Re bit 01 = 1:

The external pre-charging setting only affects the DC/AC power units.

Re bit 03 = 1:

The automatic adaptation (reduction) of the Vdc max limit is deactivated (only for chassis power units). Bit 3 only has an effect, if bit 0 is simultaneously set.

Refer to: r0192, p0210

Caution: Re bit 00:

Working with reduced input voltages de-activates undervoltage detection.

Re bit 03:

If the automatic setting of the Vdc max limit is deactivated, then all of the components connected to the DC link must be suitable for the maximum DC link voltage of the power unit (e.g. 820 V for 400 V units).

Note: Re bit 00 = 0:

It is not possible to reduce the supply voltage in p0210.

Re bit 00 = 1:

With this setting the supply voltage in p0210 can be reduced to 100 V.

Booksize PU: only for operating mode p1300 = 19

Chassis PU: only for operating mode p1300 > 19 and closed-loop DC voltage control

Re bit 01 = 0:

There is no external pre-charging of the DC/AC Motor Modules. The pre-charging monitoring is bypassed.

Re bit 01 = 1:

There is external pre-charging of the DC/AC Motor Modules. The pre-charging monitoring is calculated.

Re bit 03 = 0:

The DC link voltage limit is calculated from p0210.

Re bit 03 = 1:

The DC link voltage limit is set to the maximum value of the power unit.

Re bit 05 = 1:

The status of the inputs/outputs for the power unit contactors is displayed in r0256.

This only applies to chassis power units with 3 AC line connection and line contactors.

The status display is only effective after parameter save and POWER ON.

p0230 Drive filter type motor side / Drv filt type mot

VECTOR_G	Can be changed: C2(1, 2)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	**Max**	**Factory setting**
	0	4	0

Description: Sets the type of the filter at the motor side.

Value:
0: No filter
1: Motor reactor
2: dv/dt filter
3: Sine-wave filter Siemens
4: Sine-wave filter third-party

Dependency: The following parameters are influenced using p0230:

p0230 = 1:

--> p0233 (power unit, motor reactor) = filter inductance

p0230 = 3:

--> p0233 (power unit, motor reactor) = filter inductance

--> p0234 (power unit sine-wave filter capacitance) = filter capacitance

--> p0290 (power unit overload response) = inhibit pulse frequency reduction

--> p1082 (maximum speed) = Fmax filter / pole pair number

--> p1800 (pulse frequency) >= nominal pulse frequency of the filter

--> p1802 (modulator modes) = space vector modulation without overcontrol

--> p1811 (modulator configuration) = wobbulation amplitude

--> p1909 (motor data identification, control word) = only Rs measurement

p0230 = 4:

--> p0290 (power unit overload response) = inhibit pulse frequency reduction

--> p1802 (modulator modes) = space vector modulation without overcontrol

--> p1811 (modulator configuration) = wobbulation amplitude

--> p1909 (motor data identification, control word) = only Rs measurement

The user must set the following parameters according to the data sheet of the sine-wave filter and also the user must check whether they are permitted.

--> p0233 (power unit, motor reactor) = filter inductance

--> p0234 (power unit sine-wave filter capacitance) = filter capacitance

--> p1082 (maximum speed) = Fmax filter / pole pair number

--> p1800 (pulse frequency) >= nominal pulse frequency of the filter

Refer to: p0233, p0234, p0290, p1082, p1800, p1802

Note: if a filter type cannot be selected, then this filter type is not permitted for the Motor Module.

p0230 = 1:

The output frequency of booksize power units with output reactors is restricted to 120 Hz, for blocksize and chassis power units, to 150Hz. The maximum pulse frequency for booksize and blocksize power units is 4 kHz, for chassis power units, twice the rated pulse frequency (2.5 kHz or 4 kHz).

p0230 = 2:

Chassis power units with dv/dt filter, depending on the rated pulse frequency, may be operated with a maximum pulse frequency of p1800 = 2.5 kHz or 4 kHz. The output frequency is limited to 150 Hz.

p0230 = 3:

Sine-wave filters with a rated pulse frequency of 1.25 or 2.5 kHz should only be operated with a current controller sampling rate p0115[0] = 400 µs, sine-wave filters with a rated pulse frequency of 2 or 4 kHz with p0115[0] = 250 µs.

The sine-wave filter cannot be selected if the current controller sampling rate has not been appropriately set.

Chassis power units with sine-wave filter are limited to output frequencies of 115 Hz or 150 Hz.

p0233 Power unit motor reactor / PU mot reactor

VECTOR_G			
	Can be changed: C2(2), U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [mH]	1000.000 [mH]	0.000 [mH]

Description: Enter the inductance of a filter connected at the power unit output.

Dependency: This parameter is automatically pre-set when you select a filter via p0230 if a SIEMENS filter is defined for the power unit.

Refer to: p0230

Note: When exiting the quick commissioning using p3900 = 1, the parameter value is set to the value of the defined SIEMENS filter or to zero. For this reason, the parameter value of a third-party filter only has to be entered outside the commissioning phase (p0010 = 0) and then the controller calculation (p0340 = 3) is carried out.

p0234 Power unit sine-wave filter capacitance / PU sine filter C

VECTOR_G

Can be changed: C2(2), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [µF]	1000.000 [µF]	0.000 [µF]

Description: Enters the capacitance of a sine-wave filter connected at the power unit output.

Dependency: This parameter is automatically pre-set when you select a filter via p0230 if a SIEMENS filter is defined for the power unit.

Refer to: p0230

Note: The parameter value includes the sum of all of the capacitances of a phase connected in series (phase - ground).

When exiting the quick commissioning using p3900 = 1, the parameter value is set to the value of the defined SIEMENS filter or to zero. For this reason, the parameter value of a third-party filter only has to be entered outside the commissioning phase (p0010 = 0).

p0235 Motor reactor in series number / L_mot in SeriesQty

VECTOR_G

Can be changed: C2(1, 2)	**Calculated:** -	**Access level:** 1
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	3	1

Description: Sets the number of reactors connected in series at the power unit output.

Dependency: Refer to: p0230

Notice: If the number of motor reactors connected in series does not correspond to this parameter value, then this can result in an unfavorable control behavior.

r0238 Internal power unit resistance / PU R internal

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the internal resistance of the power unit (IGBT and line resistance).

Note: For a parallel circuit, the value corresponds to the resistance of a power unit.

p0247 Voltage measurement configuration / U_mes config

VECTOR_G

Can be changed: C2(2), U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 bin

Description: Sets the configuration for the voltage measurement.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
05	Use voltage measured values for flying restart	Yes	No	-

Warning:

Re p0247.5 = 1 (only for induction motors):

If the Voltage Sensing Module (VSM) is connected to the line voltage, then the line frequency is interpreted as speed. In this case, the flying restart function cannot be used together with VSM and the bit should be set to 0.

If only one VSM is connected at the Motor Module, line synchronization must be deactivated (p3800 = 0), in order to be able to use flying restart together with VSM. If two VSMs are connected, the second VSM is used for flying restart.

Note: The functions are only available if a Voltage Sensing Module (VSM) is assigned to the Motor Module (p0150, p0151).

p0249 Power unit cooling type / PU cool type

VECTOR_G

Can be changed: C2(1, 2)	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the cooling type for booksize compact power units.

This therefore defines whether for these power units, the internal air cooling is shut down and instead, the "Cold-Plate" cooling type is used.

Value:
0: Air cooling int
1: Cold-Plate

Note: For booksize compact power units, there is a 4 at the 5th position in the Order No.

The parameter is irrelevant for all other power unit types.

p0251[0...n] Operating hours counter power unit fan / PU fan t_oper

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [h]	4294967295 [h]	0 [h]

Description: Displays the power unit fan operating hours.

The number of hours operated can only be reset to 0 in this parameter (e.g. after a fan has been replaced).

Dependency: Refer to: p0252

Note: For liquid-cooled chassis power units, the operating hours of the inner fan are displayed in p0251 and not in p0254.

p0252 Maximum operating time power unit fan / PU fan t_oper max

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [h]	100000 [h]	40000 [h]

Description: Sets the maximum operating time of the power unit fan.

The pre-alarm (warning) is output 500 hours before this set value.

The monitoring is de-activated with p0252 = 0.

Dependency: Refer to: p0251

p0254[0...n] Operating hours counter power unit fan inside the converter / PU inner fan t_op

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [h]	4294967295 [h]	0 [h]

Description: Displays the power unit fan operating hours of the internal fan in the power unit.

The number of hours operated can only be reset to 0 in this parameter (e.g. after a fan has been replaced).

Note: For liquid-cooled chassis power units, the operating hours of the inner fan are displayed in p0251 and not in p0254.

p0255[0...7] Power unit contactor monitoring time / PU cont t_monit

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1 [ms]	65535 [ms]	[0] 0 [ms] [1] 0 [ms] [2] -1 [ms] [3] -1 [ms] [4...7] 0 [ms]

Description: Sets the monitoring time for internal monitoring of the contactor feedback contacts.

For a value 0.0 or negative values, the particular monitoring is deactivated.

Re index 0 ... 3:

Is used to monitor the delay time between the control and feedback signals of the particular contactor.

Re index 4 ... 7:

Is used for simultaneity monitoring for a parallel connection. After a contactor has been opened or closed, this checks whether, after the monitoring time has expired, all contactors of the parallel connection have assumed the same state.

Re Index 2, 3:

The value -1.0 means that the particular opening time is taken from Index 0 or 1.

Index:
[0] = Pre-charging contactor closing time
[1] = Bypass contactor closing time
[2] = Pre-charging contactor opening time
[3] = Bypass contactor opening time
[4] = Simultaneity pre-charging contactor closing time
[5] = Simultaneity bypass contactor closing time
[6] = Simultaneity pre-charging contactor opening time
[7] = Simultaneity bypass contactor opening time

Dependency: Refer to: r0256

Notice: Re index 4 ... 7:

The simultaneity monitoring is only activate after parameter save and POWER ON.

Note: - This parameter is only effective for chassis power units with 3 AC line connection and line contactors.

- The simultaneity monitoring can only be activated for a parallel connection.
- The feedback signal input of an open bypass contactor must be displayed in r0256 = 0.
- The feedback signal input of an open pre-charging contactor must be displayed in r0256 = 1.
- Determining practical monitoring times can be supported by a tracing r0256.

For power unit firmware version less than 4.6, the following applies:

There are no separate monitoring times for the delay time between opening and closing. In this case, the maximum of the opening time and closing time is effective.

r0256.0...31 CO/BO: Power unit contactor inputs/outputs status / PU contact IO stat

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9814
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	1200.0 [s]	180.0 [s]

Description: Sets starting time 2 to monitor the cooling unit after power-on command.

After powering up, the following signals must be present within starting time 2:

- "RKA conductivity, no fault"
- "RKA conductivity, no alarm"

When a fault occurs, an appropriate message is output.

Dependency: Refer to: p0266

p0262 Cooling unit fault conductivity delay time / RKA cond t_del

B_INF (Cool_unit), VECTOR_G (Cool_unit)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9795
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	30.0 [s]	0.0 [s]

Description: Sets the delay time for the fault "RKA: Conductive limit value exceeded" during operation.

The fault is only output if, during operation, the conductivity exceeds the permissible fault value and the value remains for a longer time than is set in this parameter.

p0263 Cooling unit fault liquid flow delay time / RKA flow t_del

B_INF (Cool_unit), VECTOR_G (Cool_unit)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9795
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	20.0 [s]	3.0 [s]

Description: Sets the delay time for the fault "RKA: Liquid flow too low".

The fault is only output if the cause is present for a time longer than is set in this parameter.

p0264	**Cooling unit run-on time / RKA run-on time**		
B_INF (Cool_unit), VECTOR_G (Cool_unit)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9795
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [s]	180.0 [s]	30.0 [s]

Description: Sets the run-up time of the cooling unit after a power-off command.

r0265.0...3	**BO: Cooling unit control word / RKA STW**		
B_INF (Cool_unit), VECTOR_G (Cool_unit)	**Can be changed:** -	**Calculated:** -	**Access level:** 3

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the status word of the cooling unit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	RKA powered up	Yes	No	-
01	RKA ready to be powered up	Yes	No	-
02	RKA no alarm present	Yes	No	-
03	RKA no fault present	Yes	No	-
04	RKA no leaked fluid	Yes	No	-

05	RKA liquid flow OK	Yes	No	-
06	RKA conductivity no fault	Yes	No	9974
07	RKA conductivity no alarm	Yes	No	9974

Dependency: Refer to: p0266

p0278 DC link voltage undervoltage threshold reduction / Vdc U_under red

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-80 [V]	0 [V]	0 [V]

Description: Sets the absolute value by which the threshold to initiate the undervoltage fault (F30003) is reduced.

Dependency: Refer to: p0210, r0296

Notice: When using a Control Supply Module (CSM) for 24 V supply from the DC link, the minimum continuous DC link voltage may not lie below 430 V. DC link voltages in the range 300 ... 430 V are permissible up to a duration of 1 min.

For chassis power units, this parameter has no significance.

Note: The resulting shutdown threshold can be read in r0296 and is dependent on the selected rated voltage (p0210) and the power unit being used.

p0279 DC link voltage offset alarm threshold / Vdc offs A thresh

B_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8760, 8864, 8964
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [V]	500 [V]	0 [V]

Description: Sets the voltage threshold to initiate alarm A06810.

The value represents an offset so that the alarm threshold is obtained from the total of r0296 and p0279.

Dependency: Refer to: p0210, r0296

Note: The absolute value of the undervoltage threshold r0296 depends on the selected unit supply voltage (p0210).

p0287[0...1] Ground fault monitoring thresholds / Gnd flt threshold

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	100.0 [%]	[0] 6.0 [%] [1] 16.0 [%]

Description: Sets the shutdown thresholds for the ground fault monitoring.

The setting is made as a percentage of the maximum current of the power unit (r0209).

Index: [0] = Threshold at which pre-charging starts
[1] = Threshold at which pre-charging stops

Note: The parameter only applies to booksize and chassis power units.

De-activating the ground fault monitoring:

- Sequence: --> p0287[1] = 0 --> p0287[0] = 0

- irrespective of the firmware version of the power unit.

Sets the thresholds:

- the prerequisite is at least firmware version 2.2 of the power unit.

r0289	**CO: Maximum power unit output current / PU I_outp max**		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the actual maximum output current of the power unit taking into account derating factors.

p0290	**Power unit overload response / PU overld response**		
VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8014
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	13	0

Description: Sets the response to a thermal overload condition of the power unit.

The following quantities can result in a response to thermal overload:

- heat sink temperature (r0037[0]).

- chip temperature (r0037[1]).

- power unit overload I2t (r0036).

Possible measures to avoid thermal overload:

- reduce the output current limit r0289 and r0067 (for closed-loop speed/velocity or torque/force control) or the output frequency (for U/f control) indirectly via the output current limit and the intervention of the current limiting controller).

- reduce the pulse frequency (only for vector control).

A reduction, if parameterized, is always realized after an appropriate alarm is output.

Value:

0: Reduce output current or output frequency
1: No reduction shutdown when overload threshold is reached
2: Reduce I_output or f_output and f_pulse (not using I2t)
3: Reduce the pulse frequency (not using I2t)
12: I_output or f_output and automatic pulse frequency reduction
13: Automatic pulse frequency reduction

Dependency: If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), then only responses can be selected without pulse frequency reduction (p0290 = 0, 1).

For a thermal power unit overload, an appropriate alarm or fault is output, and r2135.15 or r2135.13 set.

p0290 = 12, 13 are applicable only for blocksize power units.

Refer to: r0036, r0037, p0108, r0108, p0230, r2135

Notice: If the thermal overload of the power unit is not sufficiently reduced by the actions taken, the drive is always shut down. This means that the power unit is always protected irrespective of the setting of this parameter.

Note: The setting p0290 = 0, 2 is only practical if the load decreases with decreasing speed (e.g. for applications with variable torque such as for pumps and fans).

Under overload conditions, the current and torque limit are reduced, and therefore the motor is braked and forbidden speed ranges (e.g. minimum speed p1080 and suppression [skip] speeds p1091 ... p1094) can be passed through.

For p0290 = 2, 3, 12, 13, the I2t overload detection of the power unit does not influence the response "Reduce pulse frequency".

When the motor data identification routine is selected, p0290 cannot be changed.

r0293	**CO: Power unit alarm threshold model temperature / PU A_thr mod_temp**		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8014
	P-Group: Converter	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°C]	- [°C]	- [°C]

Description: Temperature alarm threshold for the difference from the chip and heat sink temperature in the thermal model.

Dependency: Refer to: r0037

Note: The parameter is only relevant for chassis power units.

p0294	**Power unit alarm with I2t overload / PU I2t alrm thresh**		
B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8014
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	10.0 [%]	100.0 [%]	95.0 [%]

Description: Sets the alarm threshold for the I2t power unit overload.

Dependency: Refer to: r0036

Note: The parameter is only relevant for booksize units!

p0294	**Power unit alarm with I2t overload / PU I2t alrm thresh**		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8014
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	10.0 [%]	100.0 [%]	95.0 [%]

Description: Sets the alarm threshold for the I2t power unit overload.

Drive:

If this threshold is exceeded, an overload alarm is generated and the system responds as parameterized in p0290.

Infeed:

When the threshold value is exceeded, only an overload alarm is output.

Dependency: Refer to: r0036, p0290

Note: The I2t fault threshold is 100 %. If this value is exceeded, fault F30005 is output.

p0295	**Fan run-on time / Fan run-on time**		
B_INF, VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [s]	600 [s]	0 [s]

Description: Sets the fan run-on time after the pulses for the power unit have been canceled.

Note: - Under certain circumstances, the fan can continue to run for longer than was set (e.g. as a result of the excessively high heat sink temperature).

- For values less than 1 s, a 1 s run on time for the fan is active.

r0296	DC link voltage undervoltage threshold / Vdc U_lower_thresh		
B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8750, 8760, 8850, 8864, 8950, 8964
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Threshold to detect a DC link undervoltage.

If the DC link voltage falls below this threshold, the drive unit is tripped due to a DC link undervoltage condition.

Note: The value depends on the device type and the selected device rated voltage (p0210).

r0296	DC link voltage undervoltage threshold / Vdc U_lower_thresh		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Threshold to detect a DC link undervoltage.

If the DC link voltage falls below this threshold, the drive unit is tripped due to a DC link undervoltage condition.

Dependency: Refer to: p0278

Note: The value depends on the device type and the selected device rated voltage (p0210).

For booksize drive units, the following applies:

The undervoltage threshold can be reduced with p0278.

r0297	DC link voltage overvoltage threshold / Vdc U_upper_thresh		
B_INF, VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8750, 8760, 8850, 8864, 8950, 8964
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Threshold to detect a DC link overvoltage.

If the DC link voltage exceeds the threshold specified here, the drive unit is tripped due to DC link overvoltage.

p0300[0...n]	Motor type selection / Mot type sel		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** 6310
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	10001	0

Description: Selects the motor type or starts to read in the motor parameters for a motor with DRIVE-CLiQ (p0300 = 10000 or 10001, if there is a second data set).

For p0300 < 10000 the following applies:

The first digit of the parameter value always defines the general motor type and corresponds to the third-party motor belonging to a motor list:

1 = Rotating induction motor

2 = Rotating synchronous motor

3 = Linear induction motor (reserved)

4 = Linear synchronous motor

5 = Synchronous motor separately-excited

7 = SIEMOSYN motor

8 = Reluctance motor (for textile applications)

The type information must be entered to filter motor-specific parameters and to optimize the operating characteristics and behavior. For example, for synchronous motors, power factor (p0308) is neither used nor displayed (in the BOP/AOP).

Value:

0: No motor
1: Induction motor
2: Synchronous motor
7: SIEMOSYN synchronous motor
8: Reluctance motor textile
10: 1LE1 induction motor
11: 1LA1 induction motor
12: 1LE2 induction motor
13: 1LG6 induction motor
14: 1xx1 SIMOTICS FD induction motor
15: 1LA5 induction motor
16: 1LA6 induction motor
17: 1LA7 induction motor
18: 1xx8 SIMOTICS TN induction motor
19: 1LA9 induction motor
100: 1LE1 induction motor
102: 1PH2 induction motor
104: 1PH4 induction motor
107: 1PH7 induction motor
108: 1PH8 induction motor
111: xxxx induction motor OEM
134: 1PM4 induction motor
136: 1PM6 induction motor
166: 1PL6 induction motor
222: xxxx synchronous motor OEM
264: 1FW4 synchronous motor
283: 1FW3 synchronous motor
10000: Motor with DRIVE-CLiQ
10001: Motor with DRIVE-CLiQ 2nd data set

Dependency:

Motors, selection 206, 236, 237 cannot be operated (also not as motor with DRIVE-CLiQ).

p0300 = 5 cannot be selected with SINAMICS G.

When the motor type is changed, the code number in p0301 may be reset to 0.

p0300 = 12 can only be selected for p0100 = 1 (NEMA).

When selecting a motor type from the 1LA5 and 1LA7 series, parameters p0335, p0626, p0627 and p0628 of the thermal motor model are pre-assigned as a function of p0307 and p0311.

When selecting a 1FW4 motor, if the motor database permits this, when exiting commissioning then p1750.5 is automatically set. This is the reason that after exiting commissioning, all parameters must be saved and a warm restart must be initiated (e.g. p0009 = 30, p0976 = 3).

Refer to: p0301

Caution:

A permanent-magnet synchronous motor cannot be operated with an SSI encoder without HTL/TTL track.

A separately-excited synchronous motor can only be operated with an SSI encoder if this is used as the second encoder and an HTL/TTL encoder is used as the first encoder.

Notice:

If a catalog motor is selected (p0300 >= 100) and an associated motor code number (p0301), then the parameters that are associated with this list cannot be changed (write protection). The write protection is canceled if the motor type p0300 is set to a non-Siemens motor that matches p0301 (e.g. p0300 = 2 for p0301 = 2xxxx). Write protection is automatically canceled when the results of motor data identification are copied to the motor parameters.

The motor type of a catalog motor corresponds to the upper three digits of the code number or the following assignment (if the particular motor type is listed):

Type/code number ranges

100 / 100xx, 110xx, 120xx, 130xx, 140xx, 150xx

102 / 102xx, 112xx, 122xx

104 / 104xx, 114xx, 124xx

107 / 107xx, 117xx, 127xx

108 / 108xx, 118xx, 128xx, 138xx, 148xx, 158xx

134 / 134xx, 144xx, 154xx

136 / 136xx, 146xx, 156xx

166 / 166xx, 176xx, 186xx

264 / 264xx, 274xx, 284xx, 294xx

283 / 283xx, 293xx

For 1PQ8 motors (p0300 = 18) the fan type p0335 should be set to 5.

Note: With p0300 = 10000, for a motor with DRIVE-CLiQ, the motor parameters are automatically downloaded, with p0300 = 10001, the motor parameters of a second data set (if available).

If a motor type has not been selected (p0300 = 0), then the drive commissioning routine cannot be exited.

A motor type with a value above p0300 >= 100 describes motors for which a motor parameter list exists.

Motor types with a value below p0300 < 100 correspond to the selection of a third-party motor. When appropriately selected, this means that the motor parameters are pre-assigned the settings for a third-party motor.

This also applies for parameters for a motor with DRIVE-CLiQ. In this case p0300 can only be set to p0300 = 10000 or 10001 (read motor parameters) or to the corresponding non-Siemens motor (first digit of the motor code number) in order to be able to cancel the write protection.

p0301[0...n] Motor code number selection / Mot code No. sel

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: The parameter is used to select a motor from a motor parameter list.

When changing the code number (with the exception to the value 0), all of the motor parameters are pre-assigned from the internally available parameter lists.

Dependency: Code numbers can only be selected for motor types that correspond to the motor type selected in p0300. For 1PH2, 1PH4, 1PH7, 1PM4, 1PM6, 1FT6 motors, code numbers are also possible, whose fourth decimal position is greater by a value of 1 or 2 than the matching motor type in p0300. For 1FE1 motors, the third decimal position can be higher by a value of 1.

Refer to: p0300

Note: The motor code number can only be changed if the matching catalog motor was first selected in p0300.

For a motor with DRIVE-CLiQ, p0301 cannot be changed. In this case, p0301 is automatically written to the code number of the motor parameter read in (r0302) if p0300 is set to 10000.

When selecting a catalog motor (p0300 >= 100), drive commissioning can only be exited if a code number is selected.

r0302[0...n] Motor code number of motor with DRIVE-CLiQ / Mot code mot w/ DQ

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the motor code number from the saved motor data from a motor with DRIVE-CLiQ.

Note: Drive commissioning can only be exited if the code number that was downloaded (r0302) matches the stored code number (p0301). If the numbers differ, then the motor data set should be re-loaded using p0300 = 10000.

The motor data are always expected from the first encoder that is assigned to the drive data sets (refer to p0187 = encoder 1) data set number.

The value is not updated cyclically but only on specific events (e.g. update DRIVE-CLiQ device).

r0302 = 0: No motor with DRIVE-CLiQ found

r0303[0...n] Motor with DRIVE-CLiQ status word / Motor w DQ ZSW

Description: Sets the rated motor voltage (rating plate).

Dependency: Refer to: p0349

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When the parameter value is entered the connection type of the motor (star-delta) must be taken into account.

p0305[0...n] Rated motor current / Mot I_rated

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6301
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the rated motor current (rating plate).

Dependency: Refer to: p0349

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

If p0305 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

If the rated motor current exceeds twice the maximum drive converter current (r0209), then the maximum current is reduced due to the current harmonics that increase overproportionally (r0067).

Note: When the parameter value is entered the connection type of the motor (star-delta) must be taken into account.

p0306[0...n]	Number of motors connected in parallel / Motor qty		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: Unsigned8	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	50	1

Description: Number of motors that can be operated in parallel using one motor data set.

Depending on the motor number entered, internally an equivalent motor is calculated.

The following should be carefully observed for motors connected in series:

The following rating plate data should only be entered for one motor:

- resistances and inductances: p0350 ... p0361
- currents: p0305, p0320, p0323, p0325, p0329, p0389, p0390, p0391, p0392
- power ratings: p0307
- masses/moments of inertia: p0341, p0344

All other parameters take into account the replacement/equivalent motor (e.g. r0331, r0333).

Recommend.: For motors connected in parallel, external thermal protection should be provided for each individual motor.

Dependency: Refer to: r0331

Caution: The motors to be connected in parallel must be of the same type and size (same order no. (MLFB)).

The mounting regulations when connecting motors in parallel must be carefully maintained! Especially for synchronous motors, the pole position of motors that are rigidly coupled with one another (mechanically) must be identical.

The number of motors set must correspond to the number of motors that are actually connected in parallel.

After changing p0306, it is imperative that the control parameters are adapted (e.g. using automatic calculation with p0340 = 1).

For synchronous motors connected in parallel with p1300 >= 20, be following applies:

- the individual motors must be mechanically coupled with one another and the EMF must be aligned to one another.

For induction motors that are connected in parallel, but which are not mechanically coupled with one another, then the following applies:

- an individual motor must not be loaded beyond its stall point.

Notice: If p0306 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

Note: Only operation with U/f characteristic makes sense if more than 10 identical motors are connected in parallel.

Separately-excited synchronous motors must not be connected in parallel.

Synchronous and reluctance motors that are not coupled with one another align themselves when the pulses are switched in. If the motors have different load levels, then equalization currents flow between the motors.

p0307[0...n]	Rated motor power / Mot P_rated		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 14_6	**Unit selection:** p0100
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-100000.00 [kW]	100000.00 [kW]	0.00 [kW]

Description: Sets the rated motor power (rating plate).

Dependency: IECdrives (p0100 = 0): Units kW

NEMA drives (p0100 = 1): Units hp

Refer to: p0100

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: For generators, a negative rated power should be entered.

p0308[0...n] Rated motor power factor / Mot cos phi rated

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	1.000	0.000

Description: Sets the rated motor power factor (cos phi, rating plate).

For a parameter value of 0.000, the power factor is internally calculated and displayed in r0332.

Dependency: This parameter is only available for IEC motors (p0100 = 0).

Refer to: p0100, p0309, r0332

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

p0309[0...n] Rated motor efficiency / Mot eta_rated

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	99.9 [%]	0.0 [%]

Description: Sets the rated motor efficiency (rating plate).

For a parameter value of 0.0, the power factor is internally calculated and displayed in r0332.

Dependency: This parameter is only visible for NEMA motors (p0100 = 1, 2).

Refer to: p0100, p0308, r0332

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

p0310[0...n] Rated motor frequency / Mot f_rated

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6301
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: Sets the rated motor frequency (rating plate).

Dependency: The number of pole pairs (r0313) is automatically re-calculated when the parameter is changed (together with p0311), if p0314 = 0.

The rated frequency is restricted to values between 1.00 Hz and 650.00 Hz.

Refer to: p0311, r0313, p0314

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

If p0310 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

p0311[0...n]	**Rated motor speed / Mot n_rated**		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]

Description: Sets the rated motor speed (rating plate).

For VECTOR the following applies (p0107):

For p0311 = 0, the rated motor slip of induction motors is internally calculated and displayed in r0330.

It is especially important to correctly enter the rated motor speed for vector control and slip compensation for U/f control.

Dependency: If p0311 is changed and for p0314 = 0, the pole pair (r0313) is re-calculated automatically.

Refer to: p0310, r0313, p0314

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

If p0311 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

r0313[0...n]	**Motor pole pair number, actual (or calculated) / Mot PolePairNo act**		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** 5300
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the number of motor pole pairs. The value is used for internal calculations.

r0313 = 1: 2-pole motor

r0313 = 2: 4-pole motor, etc.

Dependency: For p0314 > 0, the entered value is displayed in r0313.

For p0314 = 0, the pole pair number (r0313) is automatically calculated from the rated power (p0307), rated frequency (p0310) and rated speed (p0311).

Refer to: p0307, p0310, p0311, p0314

Note: For the automatic calculation, the pole pair number is set to the value of 2 if the rated speed or the rated frequency is zero.

p0314[0...n]	**Motor pole pair number / Mot pole pair No.**		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	255	0

Description: Sets the motor pole pair number.

p0314 = 1: 2-pole motor

p0314 = 2: 4-pole motor, etc.

Dependency: For p0314 = 0, the pole pair number is automatically calculated from the rated frequency (p0310) and the rated speed (p0311) and displayed in r0313.

Notice: If p0314 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

For induction motors, the value need only be input if the rated data of a generator is entered therefore resulting in a negative rated slip. In this case, the number of pole pairs in r0313 is too low by 1 and must be manually corrected.

p0316[0...n] Motor torque constant / Mot kT

VECTOR_G

Can be changed: C2(1, 3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 28_1	**Unit selection:** p0100
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Nm/A]	400.00 [Nm/A]	0.00 [Nm/A]

Description: Sets the torque constant of the synchronous motor.

p0316 = 0:

The torque constant is calculated from the motor data.

p0316 > 0:

The selected value is used as torque constant.

Dependency: Refer to: r0334

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: This parameter is not used for induction motors (p0300 = 1xx).

p0318[0...n] Motor stall current / Mot I_standstill

VECTOR_G

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the stall current for synchronous motors (p0300 = 2xx).

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is used for the I2t monitoring of the motor (refer to p0611).

This parameter is not used for induction motors (p0300 = 1xx).

p0320[0...n] Motor rated magnetizing current/short-circuit current / Mot I_mag_rated

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 5722
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [Arms]	5000.000 [Arms]	0.000 [Arms]

Description: Induction motors:

Sets the rated motor magnetizing current.

For p0320 = 0.000 the magnetizing current is internally calculated and displayed in r0331.

Synchronous motors:

Sets the rated motor short-circuit current.

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The magnetization current p0320 for induction motors (not for catalog motors) is reset when quick commissioning is exited with p3900 > 0.

VECTOR:

If, for induction motors, the magnetizing current p0320 is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance p0360 is changed so that the EMF r0337 remains constant.

p0322[0...n]	**Maximum motor speed / Mot n_max**		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]

Description: Sets the maximum motor speed.

Dependency: Refer to: p1082

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

If p0322 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

Note: The parameter has no significance for a value of p0322 = 0.

p0323[0...n]	**Maximum motor current / Mot I_max**		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	20000.00 [Arms]	0.00 [Arms]

Description: Sets the maximum permissible motor current (e.g. de-magnetizing current for synchronous motors).

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

If p0323 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

Note: The parameter has no effect for induction motors.

The parameter has not effect for synchronous motors if a value of 0.0 is entered. The user-selectable current limit is entered into p0640.

p0324[0...n]	**Winding maximum speed / Winding n_max**		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]

Description: Sets the maximum speed for the winding.

The following applies when calculating the maximum speed (p1082):

- for p0324 = 0 or p0532 = 0, p0322 is used.

- for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.

Dependency: Refer to: p0322, p0532, p1082

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

If p0324 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).

p0325[0...n] Motor pole position identification current 1st phase / Mot PolID I 1st ph

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [Arms]	10000.000 [Arms]	0.000 [Arms]

Description: Sets the current for the 1st phase of the two-stage technique for pole position identification routine.

The current of the 2nd phase is set in p0329.

The two-stage technique is selected with p1980 = 4.

Dependency: Refer to: p0329, p1980, p1982, r1984, r1985, r1987, p1990

Notice: When the motor code (p0301) is changed, it is possible that p0325 is not pre-assigned.

p0325 can be pre-assigned using p0340 = 3.

Note: The value is automatically pre-assigned for the following events:

- For p0325 = 0 and automatic calculation of the closed-loop control parameters (p0340 = 1, 2, 3).
- for quick commissioning (p3900 = 1, 2, 3).

p0327[0...n] Optimum motor load angle / Mot phi_load opt

VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 5722, 6721
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [°]	135.0 [°]	90.0 [°]

Description: Sets the optimum load angle for synchronous motors with reluctance torque (e.g. 1FE motors).

SERVO: The load angle is measured at 1.5 x rated motor current.

VECTOR: The load angle is measured at the rated motor current.

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: This parameter has no significance for induction motors.

For synchronous motors without reluctance torque, a angle of 90 degrees must be set.

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0328[0...n] Motor reluctance torque constant / Mot kT_reluctance

VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-1000.00 [mH]	1000.00 [mH]	0.00 [mH]

Description: Sets the reluctance torque constant for synchronous motors with reluctance torque (e.g. 1FE ... motors).

This parameter has no significance for induction motors.

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: For synchronous motors without reluctance torque, the value 0 must be set.

p0329[0...n] Motor pole position identification current / Mot PolID current

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the current for the pole position identification routine (p1980 = 1).

For a two-stage technique (p1980 = 4) , the current is set for the 2nd phase.

The current for the 1st phase is set in p0325.

Dependency: The following applies for vector drives:

If a maximum current (p0323) was not parameterized, then p0329 is limited to the rated motor current.

Refer to: p0325, p1980, p1982, r1984, r1985, r1987, p1990

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

r0330[0...n] Rated motor slip / Mot slip_rated

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the rated motor slip.

Dependency: The rated slip is calculated from the rated frequency, rated speed and number of pole pairs.

Refer to: p0310, p0311, r0313

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0331[0...n] Actual motor magnetizing current/short-circuit current / Mot I_mag_rtd act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 5722, 6722, 6724
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Induction motor:

Displays the rated magnetizing current from p0320.

For p0320 = 0, the internally calculated magnetizing current is displayed.

Synchronous motor:

Displays the rated short-circuit current from p0320.

Dependency: If p0320 was not entered, then the parameter is calculated from the rating plate parameters.

Note: In the case of multi-motor operation r0331 is increased by the factor p0306 compared to p0320.

r0332[0...n] Rated motor power factor / Mot cos phi rated

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the rated power factor for induction motors.

For IEC motors, the following applies (p0100 = 0):
For p0308 = 0, the internally-calculated power factor is displayed.
For p0308 > 0, this value is displayed.
For NEMA motors, the following applies (p0100 = 1, 2):
For p0309 = 0, the internally-calculated power factor is displayed.
For p0309 > 0, this value is converted into the power factor and displayed.

Dependency: If p0308 is not entered, the parameter is calculated from the rating plate parameters.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0333[0...n] Rated motor torque / Mot M_rated

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 7_4	**Unit selection:** p0100
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Displays the rated motor torque.

Dependency: IEC drives (p0100 = 0): unit Nm
NEMA drives (p0100 = 1): unit lbf ft

Note: For induction and reluctance motors, r0333 is calculated from p0307 and p0311.
For synchronous motors, r0333 is calculated from p0305, p0316, p0327 and p0328. The result can deviate from the input in p0312. If p0316 = 0, then r0333 = p0312 is displayed.
In the case of multi-motor operation r0333 is increased by the factor p0306 compared to the rated torque of an individual motor.

r0334[0...n] Actual motor-torque constant / Mot kT act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 28_1	**Unit selection:** p0100
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm/A]	- [Nm/A]	- [Nm/A]

Description: Displays the torque constant of the synchronous motor used.

Dependency: IEC drives (p0100 = 0): unit Nm / A
NEMA drives (p0100 = 1): unit lbf ft / A
Refer to: p0316

Note: This parameter is not used for induction motors (p0300 = 1xx).
For synchronous motors, parameter r0334 = p0316 is displayed. For p0316 = 0, r0334 is calculated from p0305 and p0312 or p0305, p0307, and p0311.

p0335[0...n] Motor cooling type / Mot cool type

VECTOR_G

Can be changed: C2(1, 3), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	128	0

Description: Sets the motor cooling system used.

Value:
0: Non-ventilated
1: Forced cooling
2: Liquid cooling
4: Non-ventilated and internal fan
5: Forced cooling and internal fan
6: Liquid cooling and internal fan
128: No fan

Dependency: For 1LA5 and 1LA7 motors (p0300), the parameter is pre-set as a function of p0307 and p0311.

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter influences the thermal 3-mass motor model.

1LA1 and 1LA8 motors are characterized by the fact that they have an internal rotor fan. This "internal cooling" lies within the motor frame and is not visible. Air is not directly exchanged with the motor ambient air.

For 1PQ8 motors, p0335 should be set to 5 as these motors are force-ventilated motors.

The setting p0335 = 128 applies for 1LA7 motors, frame size 56 (these are operated without a fan).

r0336[0...n] Actual rated motor frequency / Mot f_rated act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the rated frequency of the motor.

For p0310 > 0, this value is displayed.

Dependency: Refer to: p0311, p0314

Note: For p0310 = 0 or for synchronous motors, the rated motor frequency r0336 is calculated from the rated speed and the pole pair number.

For p0310 > 0, this value is displayed (not for synchronous motors).

r0337[0...n] Rated motor EMF / Mot EMF_rated

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the rated EMF of the motor.

Note: EMF: Electromotive force

r0339[0...n] Rated motor voltage / Mot U_rated

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the rated motor voltage.

Note: For induction motors (p0300 = 1xx) the parameter is set to p0304.

For synchronous motors, parameter r0339 = p0304 is displayed. If p0304 = 0, then r0339 is calculated from p0305 and p0316.

p0340[0...n] Automatic calculation motor/control parameters / Calc auto par

VECTOR_G

Can be changed: C2(3), T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	5	0

Description: Setting to automatically calculate motor parameters and U/f open-loop and closed-loop control parameters from the rating plate data.

Value:

0: No calculation
1: Complete calculation
2: Calculation of equivalent circuit diagram parameters
3: Calculation of closed-loop control parameters
4: Calculation of controller parameters
5: Calculation of technological limits and threshold values

Notice:

After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

The following parameters are influenced using p0340:

The parameters designated with (*) are not overwritten for catalog motors (p0300 > 100).

SERVO:

p0340 = 1:

p0340 = 4:

--> p1290, p1292, p1293, p1299, p1338, p1339, p1340, p1341, p1345, p1346, p1460, p1461, p1462, p1463, p1464, p1465, p1470, p1472, p1590, p1592, p1600, p1628, p1629, p1630, p1643, p1703, p1715, p1717, p1740, p1756, p1757, p1760, p1761, p1764, p1767, p1780, p1781, p1783, p1785, p1786, p1795, p7036, p7037, p7038

p0340 = 5:

--> p0260 ... p0264, p1037, p1038, p1520, p1521, p1530, p1531, p1574, p1750, p1802, p1803, p2140, p2142, p2148, p2150, p2161 ... p2164, p2175, p2177, p2194, p3207, p3208, p3236, p3237, p3806, p3815, p3820 ... p3829

Note: The calculation is not performed, if the power unit is deactivated.

p0340 = 1 contains the calculations of p0340 = 2, 3, 4, 5 without overwriting the motor parameters from the Siemens motor lists (p0301 > 0).

p0340 = 2 calculates the motor parameters (p0350 ... p0360), but only if it does involve a Siemens catalog motor (p0301 = 0).

p0340 = 3 contains the calculations of p0340 = 4, 5.

p0340 = 4 only calculates the controller parameters.

p0340 = 5 only calculates the controller limits.

When quick commissioning is exited using p3900 > 0, p0340 is automatically set to 1.

At the end of the calculations, p0340 is automatically set to 0.

If the STARTER commissioning software writes a 3 into p0340 when "downloading to target device", then this corresponds to a "complete calculation of the motor/control parameters without equivalent circuit diagram data". The same calculations are carried out as for p0340 = 1, however, without the equivalent circuit diagram parameters of the motor (p0340 = 2), the motor moment of inertia (p0341) and the motor mass (p0344).

For third-party linear synchronous motors (p0300 = 4) equivalent circuit diagram data are not calculated (p0340 = 2).

p0341[0...n] Motor moment of inertia / Mot M_mom of inert

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 5042, 5210, 6020, 6030, 6031
P-Group: Motor	**Units group:** 25_1	**Unit selection:** p0100
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000000 [kgm²]	100000.000000 [kgm²]	0.000000 [kgm²]

Description: Sets the motor moment of inertia (without load).

Dependency: IEC drives (p0100 = 0): unit kg m^2

NEMA drives (p0100 = 1): unit lb ft^2

The parameter value is included, together with p0342, in the rated starting time of the motor.

Refer to: p0342, r0345

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: SERVO:

p0341 * p0342 + p1498 influence the speed/torque pre-control in encoderless operation.

VECTOR:

The product of p0341 * p0342 is used when the speed controller (p0340 = 4) is calculated automatically.

p0342[0...n] Ratio between the total and motor moment of inertia / Mot MomInert Ratio

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 5042, 5210, 6020, 6030, 6031
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.000	10000.000	1.000

Description: Sets the ratio between the total moment of inertia/mass (load + motor) and the intrinsic motor moment of inertia/mass (no load).

Dependency: This means that together with p0341, the rated starting (accelerating time) of the motor is calculated for a vector drive.

Refer to: p0341, r0345, p1498

Note: SERVO:

p0341 * p0342 + p1498 influence the speed/torque pre-control in encoderless operation.

VECTOR:

The product of p0341 * p0342 is used when the speed controller (p0340 = 4) is calculated automatically.

r0343[0...n] Rated motor current identified / Mot I_rated ident

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	- [Arms]

Description: Displays the identified rated motor current.

p0344[0...n] Motor weight (for the thermal motor model) / Mot weight th mod

VECTOR_G

Can be changed: C2(3), T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 27_1	**Unit selection:** p0100
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [kg]	50000.0 [kg]	0.0 [kg]

Description: Sets the motor weight.

Dependency: IEC drives (p0100 = 0): unit kg

NEMA drives (p0100 = 1): unit lb

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter influences the thermal 3 mass model of the induction motor.

The parameter is not used for synchronous motors (p0300 = 2xx).

r0345[0...n] Nominal motor starting time / Mot t_start_rated

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [s]	- [s]	- [s]

Description: Displays the rated motor starting time.

This time corresponds to the time from standstill up to reaching the motor rated speed and the acceleration with motor rated torque (r0333).

Dependency: Refer to: r0313, r0333, r0336, p0341, p0342

p0346[0...n] Motor excitation build-up time / Mot t_excitation

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-20.000 [s]	20.000 [s]	0.000 [s]

Description: Sets the excitation build-up time of the motor.

This involves the delay time between enabling the pulses and enabling the ramp-function generator. The induction motor is magnetized during this time.

Caution: If there is insufficient magnetization under load or if the acceleration rate is too high, then an induction motor can stall (refer to the note). This is especially true for sensorless vector control or U/f control.

Notice: If the parameter is set to 0 s for separately-excited synchronous motors (p0300 = 5), then an excitation current setpoint is generated even if the drive is powered down. In the base speed range, this is the no-load excitation current (p0389). In the field-weakening range, the value is reduced with the inverse value of the actual speed. An excitation current setpoint is not generated during de-magnetizing (p0347) and if an encoder fault is detected.

When starting or executing a flying restart for a separately-excited synchronous motor without encoder or with incremental encoder, then the voltage induced in the stator by the excitation current pulse is used to determine the rotor position. The length of the ramp is pre-assigned from the motor data for p0346 = 0 s. If it crystallizes out that this time is too short, then it can be extended by entering a negative value in p0346, whereby otherwise, the excitation behavior corresponds with that for p0346 = 0 s. For all other motor types, p0346 is internally limited downwards to 0 s.

Note: The parameter is calculated using p0340 = 1, 3.

For induction motors, the result depends on the rotor time constant (r0384). If this time is excessively reduced, this can result in an inadequate magnetizing of the induction motor. This is the case if the current limit is reached while building up magnetizing. For induction motors, the parameter cannot be set to 0 s (internal limit: 0.1 * r0384).

For permanent-magnet synchronous motors and vector control, the value depends on the stator time constant (r0386). Here, it defines the time to establish the current for encoderless operation immediately after the pulses have been enabled.

The current to excite the induction motor can be limited in p0644.

p0347[0...n] Motor de-excitation time / Mot t_de-excitat

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	20.000 [s]	0.000 [s]

Description: Sets the de-magnetizing time (for induction motors) after the inverter pulses have been canceled.

The inverter pulses cannot be switched in (enabled) within this delay time.

Note: The parameter is calculated using p0340 = 1, 3.

For induction motors, the result depends on the rotor time constant (r0384).

if this time is shortened too much, then this can result in an inadequate de-magnetizing of the induction motor and in an overcurrent condition when the pulses are subsequently enabled (only when the flying restart function is activated and the motor is rotating).

p0349 System of units motor equivalent circuit diagram data / Unit_sys mot ESB

VECTOR_G

Can be changed: C2(3)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	1

Description: Sets the actual system of units for motor equivalent circuit diagram data.

Value:
1: System of units, physical
2: System of units referred

Dependency: The parameter can only be changed in an offline project using the commissioning software.

Refer to: p0304, p0305, p0310

Note: The reference parameter for resistances of the rated motor impedance Z = p0304 / (1.732 * p0305) is in the % units system.

Inductances are converted into a resistance using the factor 2 * Pi * p0310.

If a reference parameter (p0304, p305, p0310) is zero, then it is not possible to make a changeover to "referred" values (per unit values).

p0350[0...n] Motor stator resistance cold / Mot R_stator cold

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00000 [ohm]	2000.00000 [ohm]	0.00000 [ohm]

Description: Sets the stator resistance of the motor at ambient temperature p0625 (phase value).

Dependency: Refer to: p0625, r1912

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The motor identification routine determines the stator resistance from the total stator resistance minus the cable resistance (p0352).

p0352[0...n] Cable resistance / R_cable

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00000 [ohm]	120.00000 [ohm]	0.00000 [ohm]

Description: Resistance of the power cable between the Motor Module and motor.

Dependency: Refer to: p7003

Caution: The cable resistance should be entered prior to motor data identification. If it is used subsequently, the difference by which p0352 was changed must be subtracted from the stator resistance p0350 or motor data identification must be repeated.

Notice: Parallel circuits with one winding system (p7003 = 0):

p0352 includes the feeder cable resistance of an individual Motor Module. The total feeder cable resistance is obtained from p0352 divided by the number of activated Motor Modules (refer to r0395).

Parallel circuits with multi-winding system (p7003 = 1):

p0352 includes the complete feeder cable resistance and is directly added to the stator resistance (refer to r0395).

Note: The parameter influences the temperature adaptation of the stator resistance.

The motor identification sets the cable resistance to 20% of the measured total resistance if p0352 is zero at the time that the measurement is made. If p0352 is not zero, then the value is subtracted from the measured total stator resistance to calculate stator resistance p0350. In this case, p0350 is a minimum of 10% of the measured value.

Exception:

For parallel circuit configurations with one winding system (p07003 = 0), the cable resistance is directly measured. It is important to note that only the component of an individual Motor Module is entered into p0352.

The cable resistance is reset when quick commissioning is exited with p3900 > 0.

p0353[0...n] Motor series inductance / Mot L_series

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [mH]	1000000.000 [mH]	0.000 [mH]

Description: Sets the series inductance.

Note: For the automatic calculation with p0340 = 1, 3 or 4, the calculation of p1715 is influenced by p0353.

The series inductance is reset when quick commissioning is exited with p3900 > 0.

p0354[0...n] Motor rotor resistance cold / damping resistance d axis / Mot R_r cold/R_D d

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6727
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00000 [ohm]	300.00000 [ohm]	0.00000 [ohm]

Description: Sets the rotor/secondary section resistance of the motor at the ambient temperature p0625.

For separately-excited synchronous motors: Sets the damping resistance in the rotor direction (d-axis).

This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor data identification routine (p1910) (not for separately-excited synchronous motors).

Dependency: Refer to: p0625

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

p0355[0...n] Motor damping resistance q axis / Mot R_damp q

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6727
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00000 [ohm]	300.00000 [ohm]	0.00000 [ohm]

Description: Sets the damping resistance of the separately-excited synchronous motor quadrature to the rotor direction (q axis).

This parameter value is automatically calculated using the motor model (p0340 = 1, 2).

p0356[0...n] Motor stator leakage inductance / Mot L_stator leak.

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910).

Induction motor, separately-excited synchronous motor: Sets the rotor leakage inductance of the motor.

Synchronous motor: Sets the stator quadrature axis inductance of the motor.

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: If the stator leakage inductance (p0356) for induction motors is changed outside the commissioning phase (p0010 > 0), the magnetizing inductance (p0360) is automatically adapted to the new EMF (r0337). You are then advised to repeat the measurement for the saturation characteristic (p1960).

For permanent-magnet synchronous motors (p0300 = 2), this is the non-saturated value and is, therefore, ideal for a low current.

p0357[0...n] Motor stator inductance d axis / Mot L_stator d

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: Sets the stator direct-axis inductance of the synchronous motor.

This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910).

Note: The parameter is not used for separately-excited synchronous motors (p0300 = 5).

For permanent-magnet synchronous motors (p0300 = 2), this is the non-saturated value and is ideal for a low current.

p0358[0...n] Motor rotor leakage inductance / damping inductance d axis / Mot L_r leak / LDd

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6727
P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: Sets the rotor/secondary section leakage inductance of the motor.

For separately-excited synchronous motors: Sets the damping inductance in the rotor direction (d-axis).

This value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately-excited synchronous motors).

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

VECTOR:

If the rotor leakage inductance (p0358) for induction motors is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance (p0360) is automatically adapted to the new EMF (r0337). You are then advised to repeat the measurement for the saturation characteristic (p1960).

p0359[0...n] Motor damping inductance q axis / Mot L_damp q

VECTOR_G			
	Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6727
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: Sets the damping inductance of the separately-excited synchronous motor quadrature to the rotor direction (q axis).

This parameter value is automatically calculated using the motor model (p0340 = 1, 2).

p0360[0...n] Motor magnetizing inductance/magn. inductance d axis saturated / Mot Lh/Lh d sat

VECTOR_G			
	Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6727
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00000 [mH]	10000.00000 [mH]	0.00000 [mH]

Description: Sets the magnetizing inductance of the motor.

For separately-excited synchronous motors: Sets the saturated magnetizing inductance in the rotor direction (d-axis).

This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately-excited synchronous motors).

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

p0361[0...n] Motor magnetizing inductance q axis saturated / Mot L_magn q sat

VECTOR_G			
	Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6727
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00000 [mH]	10000.00000 [mH]	0.00000 [mH]

Description: Sets the saturated magnetizing inductance of the separately-excited synchronous motor quadrature to the rotor direction (q axis).

This parameter value is automatically calculated using the motor model (p0340 = 1, 2).

p0362[0...n]	Motor saturation characteristic flux 1 / Mot saturat.flux 1		
VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6723, 6726
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	10.0 [%]	800.0 [%]	60.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the y coordinate (flux) for the 1st value pair of the characteristic.

Induction motors (ASM) and separately-excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the first motor flux as a [%] referred to the rated motor flux.

Permanent-magnet synchronous motors (PESM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the first stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.

Dependency: The following applies for the flux values:

p0362 < p0363 < p0364 < p0365

The following applies for the stator quadrature axis flux values (PESM):

20 % < p0362 < p0363 < p0364 < p0365

Refer to: p0366

Notice: For permanent-magnet synchronous motors (PESM):

If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: For induction motors, p0362 = 100 % corresponds to the rated motor flux.

For separately-excited synchronous motors p0362 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed).

With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305).

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0363[0...n]	Motor saturation characteristic flux 2 / Mot saturat.flux 2		
VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6723, 6726
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	10.0 [%]	800.0 [%]	85.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the y coordinate (flux) for the 2nd value pair of the characteristic.

Induction motors (ASM) and separately-excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the second motor flux as a [%] referred to the rated motor flux.

Permanent-magnet synchronous motors (PESM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the second stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.

Dependency: The following applies for the flux values:

p0362 < p0363 < p0364 < p0365

The following applies for the stator quadrature axis flux values (PESM):

20 % < p0362 < p0363 < p0364 < p0365

Refer to: p0367

Notice: For permanent-magnet synchronous motors (PESM):

If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: For induction motors, p0363 = 100 % corresponds to the rated motor flux.

For separately-excited synchronous motors p0363 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed).

With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305).

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0364[0...n] Motor saturation characteristic flux 3 / Mot saturat.flux 3

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6723, 6726
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.0 [%]	800.0 [%]	115.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the y coordinate (flux) for the 3rd value pair of the characteristic.

Induction motors (ASM) and separately-excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the third motor flux as a [%] referred to the rated motor flux.

Permanent-magnet synchronous motors (PESM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the third stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.

Dependency: The following applies for the flux values:

p0362 < p0363 < p0364 < p0365

The following applies for the stator quadrature axis flux values (PESM):

20% < p0362 < p0363 < p0364 < p0365

Refer to: p0368

Notice: For permanent-magnet synchronous motors (PESM):

If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: For induction motors, p0364 = 100 % corresponds to the rated motor flux.

For separately-excited synchronous motors p0364 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed).

With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305).

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0365[0...n]	Motor saturation characteristic flux 4 / Mot saturat.flux 4		
VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6723, 6726
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	10.0 [%]	800.0 [%]	125.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the y coordinate (flux) for the 4th value pair of the characteristic.

Induction motors (ASM) and separately-excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the fourth motor flux as a [%] referred to the rated motor flux.

Permanent-magnet synchronous motors (PESM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the fourth stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.

Dependency: The following applies for the flux values:

p0362 < p0363 < p0364 < p0365

The following applies for the stator quadrature axis flux values (PESM):

20 % < p0362 < p0363 < p0364 < p0365

Refer to: p0369

Notice: For permanent-magnet synchronous motors (PESM):

If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: For induction motors, p0365 = 100 % corresponds to the rated motor flux.

For separately-excited synchronous motors p0365 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed).

With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305).

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0366[0...n]	Motor saturation characteristic I_mag 1 / Mot sat. I_mag 1		
VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6723, 6726
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	5.0 [%]	800.0 [%]	50.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the x coordinate for the 1st value pair of the characteristic.

Induction motors (ASM) and separately-excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the first magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM).

Permanent-magnet synchronous motors (PESM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the first stator quadrature axis current as a [%] referred to the rated motor current (p0305).

Dependency: The following applies for the magnetizing currents:

p0366 < p0367 < p0368 < p0369

The following applies for the stator quadrature axis current values (PESM):

20 % < p0366 < p0367 < p0368 < p0369

Refer to: p0362

Notice: For permanent-magnet synchronous motors (PESM), the following applies:

If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0367[0...n] Motor saturation characteristic I_mag 2 / Mot sat. I_mag 2

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6723, 6726

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
5.0 [%]	800.0 [%]	75.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the x coordinate for the 2nd value pair of the characteristic.

Induction motors (ASM) and separately-excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the second magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM).

Permanent-magnet synchronous motors (PESM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the second stator quadrature axis current as a [%] referred to the rated motor current (p0305).

Dependency: The following applies for the magnetizing currents:

p0366 < p0367 < p0368 < p0369

The following applies for the stator quadrature axis current values (PESM):

20 % < p0366 < p0367 < p0368 < p0369

Refer to: p0363

Notice: For permanent-magnet synchronous motors (PESM), the following applies:

If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0368[0...n] Motor saturation characteristic I_mag 3 / Mot sat. I_mag 3

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6723, 6726
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
5.0 [%]	800.0 [%]	150.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the x coordinate for the 3rd value pair of the characteristic.

Induction motors (ASM) and separately-excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the third magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM).

Permanent-magnet synchronous motors (PESM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the third stator quadrature axis current as a [%] referred to the rated motor current (p0305).

Dependency: The following applies for the magnetizing currents:

p0366 < p0367 < p0368 < p0369

The following applies for the stator quadrature axis current values (PESM):

20 % < p0366 < p0367 < p0368 < p0369

Refer to: p0364

Notice: For permanent-magnet synchronous motors (PESM), the following applies:

If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0369[0...n] Motor saturation characteristic I_mag 4 / Mot sat. I_mag 4

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6723, 6726

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
5.0 [%]	800.0 [%]	210.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the x coordinate for the 4th value pair of the characteristic.

Induction motors (ASM) and separately-excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the fourth magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM).

Permanent-magnet synchronous motors (PESM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the fourth stator quadrature axis current as a [%] referred to the rated motor current (p0305).

Dependency: The following applies for the magnetizing currents:

p0366 < p0367 < p0368 < p0369

The following applies for the stator quadrature axis current values (PESM):

20 % < p0366 < p0367 < p0368 < p0369

Refer to: p0365

Notice: For permanent-magnet synchronous motors (PESM), the following applies:

If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

r0370[0...n] Motor stator resistance cold / Mot R_stator cold

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the motor stator resistance at an ambient temperature (p0625).

The value does not include the cable resistance.

Dependency: Refer to: p0625

r0372[0...n] **Cable resistance / Mot R_cable**

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the total cable resistance between Motor Module and motor, as well as the internal converter resistance.

Dependency: Refer to: r0238, p0352

r0373[0...n] **Motor rated stator resistance / Mot R_stator rated**

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the rated motor stator resistance at rated temperature (total of p0625 and p0627).

Dependency: Refer to: p0627

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0374[0...n] **Motor rotor resistance cold / damping resistance d axis / Mot R_r cold/R_D d**

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the rotor/secondary section resistance of the motor for the ambient temperature p0625.
For separately-excited synchronous motors:
Displays the damping resistance in the rotor direction (d-axis).

Dependency: Refer to: p0625

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0375[0...n] **Motor damping resistance q axis / Mot R_damp q**

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the damping resistance of the separately-excited synchronous motor quadrature to the rotor direction (q axis).

r0376[0...n] **Rated motor rotor resistance / Mot rated R_rotor**

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the nominal rotor / secondary section resistance of the motor at the rated temperature.

	The rated temperature is the sum of p0625 and p0628.
Dependency:	Refer to: p0628
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).

r0377[0...n] Motor leakage inductance total / Mot L_leak total

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6640
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [mH]	- [mH]	- [mH]

Description: Displays the total stray inductance of the motor.

Induction motor, separately-excited synchronous motor:

Displays the stator leakage inductance of the motor, including the series inductance (p0353) and the motor reactor (p0233).

Synchronous motor:

Displays the stator quadrature inductance, including the series inductance (p0353) and the motor reactor (p0233).

r0378[0...n] Motor stator inductance d axis / Mot L_stator d

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [mH]	- [mH]	- [mH]

Description: Displays the stator longitudinal inductance of the synchronous motor including the series inductance (p0353) and the motor reactor (p0233).

Note: The parameter is not used for separately-excited synchronous motors (p0300 = 5).

r0380[0...n] Motor damping inductance d axis / Mot L_damp d

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [mH]	- [mH]	- [mH]

Description: Displays the damping inductance of the separately-excited synchronous motor in the rotor direction (d-axis).

r0381[0...n] Motor damping inductance q axis / Mot L_damp q

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [mH]	- [mH]	- [mH]

Description: Displays the damping inductance of a separately-excited synchronous motor quadrature to the rotor direction (q axis).

r0382[0...n] Motor magnetizing inductance transformed / Lh d axis saturated / Mot L_m tr/Lhd sat

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [mH]	- [mH]	- [mH]

Description: Displays the magnetizing inductance of the motor.

For separately-excited synchronous motors:

Displays the saturated magnetizing inductance in the rotor direction (d-axis).

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0383[0...n] Motor magnetizing inductance q axis saturated / Mot L_magn q sat

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** 15_1	**Unit selection:** p0349
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [mH]	- [mH]	- [mH]

Description: Displays the saturated magnetizing inductance of a separately-excited synchronous motor quadrature to the rotor direction (q axis).

r0384[0...n] Motor rotor time constant / damping time constant d axis / Mot T_rotor/T_Dd

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6722
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ms]	- [ms]	- [ms]

Description: Displays the rotor time constant.

For separately-excited synchronous motors:

Displays the damping time constant to the rotor direction (d axis).

Note: The parameter is not used for synchronous motors.

The value is calculated from the total of the inductances on the rotor side (p0358, p0360) divided by the rotor/damping resistance (p0354). The temperature adaptation of the rotor resistance for induction motors is not taken into account.

r0385[0...n] Motor damping time constant q axis / Mot L_damping q

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ms]	- [ms]	- [ms]

Description: Displays the damping time constant of a separately-excited synchronous motor quadrature to the rotor direction (q axis).

Note: The value is calculated from the total of the inductances on the damping side (p0359, p0361) divided by the damping resistance (p0355).

r0386[0...n]	Motor stator leakage time constant / Mot T_stator leak		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ms]	- [ms]	- [ms]

Description: Displays the stator leakage time constant.

Note: The value is calculated from the total of all leakage inductances (p0233*, p0353, p0356, p0358) divided by the total of all motor resistances (p0350, p0352, p0354). The temperature adaptation of the resistances is not taken into account.

* only applies for VECTOR (r0107).

r0387[0...n]	Motor stator leakage time constant q axis / Mot T_Sleak /T_Sq		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ms]	- [ms]	- [ms]

Description: Displays the stator leakage time constant quadrature to the rotor direction (q axis).

Note: The value is calculated from the total of all leakage inductances (p0233, p0356, p0359) divided by the total of all motor resistances (p0350, p0352, p0355).

The temperature adaptation of the resistances is not taken into account.

p0389[0...n]	Excitation rated no-load current / Exc I_noload_rated		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6727
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [A]	10000.00 [A]	0.00 [A]

Description: Sets the rated no-load current (I_F0) for the excitation.

p0390[0...n]	Rated excitation current / Exc I_rated		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6727
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [A]	10000.00 [A]	0.00 [A]

Description: Setting the rated current (I_F) of the controlled excitation rectifier (DC master).

p0391[0...n]	Current controller adaptation starting point KP / I_adapt pt KP		
VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6714
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]

Description: Sets the starting point of the current-dependent current controller adaptation where the current controller gain p1715 is effective.

Dependency: Refer to: p0392, p0393, p1402, p1715

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0392[0...n] Current controller adaptation starting point KP adapted / I_adapt pt KP adap

VECTOR_G			
	Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6714
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]

Description: Sets the starting point of the current-dependent current controller adaptation where the adapted current controller gain p1715 x p0393 is effective.

Dependency: Refer to: p0391, p0393, p1402, p1715

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0393[0...n] Current controller adaptation P gain scaling / I_adapt Kp scal

VECTOR_G			
	Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6714
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the factor for the current controller P gain in the adaptation range (e.g. r0078 > p0392, if p0392 > p0391).

The value is referred to p1715.

Dependency: Refer to: p0391, p0392, p1402, p1715

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: For p0393 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range.

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

r0395[0...n] Actual stator resistance / R_stator act

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6301, 6730, 6731, 6732
	P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual stator resistance (phase value).

The parameter value also contains the temperature-independent cable resistance.

Dependency: In the case of induction motors the parameter is also affected by the motor temperature model.

Refer to: p0350, p0352, p0620

Note: In each case, only the stator resistance of the active Motor Data Set is included with the stator temperature of the thermal motor model.

r0396[0...n] Actual rotor resistance / R_rotor act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 6730
P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual rotor/secondary section resistance (phase value).

The parameter is affected by the motor temperature model.

Dependency: Refer to: p0354, p0620

Note: In each case, only the rotor resistance of the active Motor Data Set is included with the rotor temperature of the thermal motor model.

This parameter is not used for synchronous motors (p0300 = 2xx).

p0397[0...n] Angle magnetic decoupling maximum angle / Magn decpl max_ang

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [°]	90.0 [°]	90.0 [°]

Description: Maximum angle when calculating the polynomial function to decouple the magnetic flux axes for permanent-magnet synchronous motors (see p0398, p0399).

p0398[0...n] Angle magn decoupling (cross saturation) coeff 1 / Magn decoupl C1

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.000000	10.000000	0.000000

Description: The magnetic cross coupling of the motor's d and q axes caused by saturation (current-dependent) leads to an angle offset affecting the axis system d'q'; this decouples the magnetic quantities.

The angle offset can be described as a 3rd order polynomial function of the load current consumed:

phiOffset = f(C1*iq + C3*iq^3)

This parameter is the coefficient C1; it describes the linear load impact effect.

p0399[0...n] Angle magn decoupling (cross saturation) coeff 3 / Magn decoupl C3

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.000000	10.000000	0.000000

Description: The magnetic cross coupling of the motor's d and q axes caused by saturation (current-dependent) leads to an angle offset affecting the axis system d'q'; this decouples the magnetic quantities.

The angle offset can be described as a 3rd order polynomial function of the load current consumed:

phiOffset = f(C1*iq + C3*iq^3)

This parameter is the coefficient C3; it describes the cubic load impact effect.

p0400[0...n] Encoder type selection / Enc_typ sel

ENC			
	Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** 4700, 4704
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	10100	0

Description: Selects the encoder from the list of encoder types supported.

Value:
0: No encoder
202: DRIVE-CLiQ encoder AS20, singleturn
204: DRIVE-CLiQ encoder AM20, multiturn 4096

3020: 2048 TTL A/B R, with sense
3081: SSI, Singleturn, 24 V
3082: SSI, Multiturn 4096, 24 V
3090: 4096, HTL, A/B, SSI, Singleturn
3109: 2000 nm, TTL, A/B R distance-coded
9999: User-defined
10000: Identify encoder
10050: Encoder with EnDat2.x interface identified
10051: DRIVE-CLiQ encoder identified
10058: Digital encoder (absolute) identified
10059: Digital encoder (incremental) identified
10100: Identify encoder (waiting)

Notice: An encoder type with p0400 < 9999 defines an encoder for which there is an encoder parameter list.

When selecting a catalog encoder (p0400 < 9999) the parameters from the encoder parameter list cannot be changed (write protection). To remove write protection, the encoder type should be set to a third-party encoder (p0400 = 9999).

Note: The connected encoder can be identified by setting p0400 to 10000 or 10100. This assumes that the encoder supports this method, which is possible in the following cases: Motor with DRIVE-CLiQ, encoder with EnDat interface, DRIVE-CLiQ encoder, encoder with SSI interface (only 10100)..

The encoder data (e.g. pulse number p0408) can only be changed when p0400 = 9999.

When using an encoder with track A/B and zero pulse, as standard, fine synchronization is not set using a zero mark. If, for a synchronous motor, fine synchronization is to be realized using a zero mark, then the following must be executed:

- set p0400 to 9999
- set p0404.15 to 1

Prerequisite:

Coarse synchronization must be selected (e.g. pole position identification) and the zero pulse of the encoder must be either mechanically or electronically (p0431) adjusted to the pole position.

For p0400 = 10000 the following applies:

If an identification is not possible, then p0400 is set to 0.

For p0400 = 10100 the following applies:

If an identification is not possible, p0400 remains set to 10100 until it becomes possible.

---

p0400[0...n] Encoder type selection / Enc_typ sel

VECTOR_G

Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 1

p0401[0...n] Encoder type OEM selection / Enc type OEM sel

ENC, VECTOR_G

Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** 4700, 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	32767	0

Description: Selects the encoder from the list of encoder types that the OEM supports.

Note: The connected encoder can be identified by p0400 = 10000. This means that the encoder must support this and is possible in the following cases: Motor with DRIVE-CLiQ, encoder with EnDat interface.

If an identification is not possible, then p0400 is set to 0.

The encoder data (e.g. pulse number p0408) can only be changed when p0400 = 9999.

Using p0400 = 20000, the encoder type can be selected from the list of OEM encoders using p0401.

p0402[0...n] Gearbox type selection / Gearbox type sel

ENC, VECTOR_G

Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	10100	9999

Description: Selects the gearbox type to pre-set the inversion and the gearbox factor.

Measuring gear factor = motor or load revolutions / encoder revolutions.

Value:
1: Gearbox 1:1 not inverted
2: Gearbox 2:7 inverted
3: Gearbox 4:17 inverted
4: Gearbox 2:10 inverted
9999: Gearbox user-defined
10000: Identify gearbox
10100: Identify gearbox

Dependency: Refer to: p0410, p0432, p0433

Note: Re p0402 = 1:

Automatic setting of p0410 = 0000 bin, p0432 = 1, p0433 = 1.

Re p0402 = 2:

Automatic setting of p0410 = 0011 bin, p0432 = 7, p0433 = 2.

Re p0402 = 3:

Automatic setting of p0410 = 0011 bin, p0432 = 17, p0433 = 4.

Re p0402 = 4:

Automatic setting of p0410 = 0011 bin, p0432 = 10, p0433 = 2.

Re p0402 = 9999:

No automatic setting of p0410, p0432, p0433. The parameters should be manually set.

Re p0402 = 10000:

It is only possible to identify the gearbox type for a motor with DRIVE-CLiQ. Parameters p0410, p0432 and p0433 are set corresponding to the identified gearbox. If an identification is not possible, then p0402 is set to 9999.

p0404[0...n]	Encoder configuration effective / Enc_config eff		
ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** 4010, 4704
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Settings for the basic encoder properties.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Linear encoder	Yes	No	-
01	Absolute encoder	Yes	No	-
02	Multiturn encoder	Yes	No	-
03	Track A/B sq-wave	Yes	No	-
04	Track A/B sine	Yes	No	-
05	Track C/D	Yes	No	-
06	Hall sensor	Yes	No	-
08	EnDat encoder	Yes	No	-
09	SSI encoder	Yes	No	-
10	DRIVE-CLiQ encoder	Yes	No	-
11	Digital encoder	Yes	No	-
12	Equidistant zero mark	Yes	No	-
13	Irregular zero mark	Yes	No	-
14	Distance-coded zero mark	Yes	No	-
15	Commutation with zero mark (not ASM)	Yes	No	-
16	Acceleration	Yes	No	-
17	Track A/B analog	Yes	No	-
20	Voltage level 5 V	Yes	No	-
21	Voltage level 24 V	Yes	No	-
22	Remote sense (only SMC30)	Yes	No	-
23	Resolver excit	Yes	No	-

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: ZM: Zero mark

SMC: Sensor Module Cabinet

If a technique to determine the commutation information/data has not been selected (e.g. track C/D, Hall sensor), and the encoder pulse number is an integer multiple of the pole number, then the following applies:

The track A/B is adjusted to match the magnetic position of the motor.

Re bit 01, 02 (absolute encoder, multiturn encoder):

These bits can only be selected for EnDat encoders, SSI encoders or DRIVE-CLiQ encoders.

Re bit 10 (DRIVE-CLiQ encoder):

This bit is only used for the large-scale integrated DRIVE-CLiQ encoders that provide their encoder data directly in DRIVE-CLiQ format without converting this data. This bit is not, therefore, set for first-generation DRIVE-CLiQ encoders.

Re bit 12 (equidistant zero mark):

The zero marks occur at regular intervals (e.g. rotary encoder with 1 zero mark per revolution or linear encoder with constant zero mark distance).

The bit activates monitoring of the zero mark distance (p0424/p0425, linear/rotary) or in the case of the linear encoder with 1 zero mark and p0424 = 0 zero mark monitoring is activated.

Re bit 13 (irregular zero mark):

The zero marks occur at irregular intervals (e.g. a linear scale with only 1 zero mark in the traversing range). The zero mark distance is not monitored.

Re bit 14 (distance-coded zero mark):

The distance (clearance) between two or several consecutive zero marks allows the absolute position to be calculated.

Re bit 15 (commutation with zero mark):

Only applicable for synchronous motors.

The function can be de-selected by priority via p0430.23.

For distance-coded zero marks, the following applies:

The phase sequence of the C/D track (if available) must be the same as the phase sequence of the encoder (A/B track).

The phase sequence of the Hall signal (if available) must be the same as the phase sequence of the motor. Further, the position of the Hall sensor must be mechanically adjusted to the motor EMF.

The fine synchronization is only started after two zero marks have been passed.

p0404[0...n] Encoder configuration effective / Enc_config eff

VECTOR_G

The function can be de-selected by priority via p0430.23.

For distance-coded zero marks, the following applies:

The phase sequence of the C/D track (if available) must be the same as the phase sequence of the encoder (A/B track).

The phase sequence of the Hall signal (if available) must be the same as the phase sequence of the motor. Further, the position of the Hall sensor must be mechanically adjusted to the motor EMF.

The fine synchronization is only started after two zero marks have been passed.

p0405[0...n] Square-wave encoder track A/B / Sq-wave enc A/B

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 1111 bin

Description: Settings for the track A/B in a square-wave encoder.

For square-wave encoders, p0404.3 must also be 1.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Signal	Bipolar	Unipolar	-
01	Level	TTL	HTL	-
02	Track monitoring	A/B <> -A/B	None	-
03	Zero pulse	Same as A/B track	24 V unipolar	-
04	Switching threshold	High	Low	-
05	Pulse/direction	Active	Inactive	-

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: Re bit 02:

When the function is activated, track monitoring can be de-activated by setting p0437.26.

Re bit 05:

When the function is activated, a frequency setpoint and a direction for traveling can be entered via an encoder interface.

p0407[0...n] Linear encoder grid division / Enc grid div

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** 4010, 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [nm]	250000000 [nm]	16000 [nm]

Description: Sets the grid division for a linear encoder.

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: The lowest permissible value is 250 nm.

p0408[0...n] Rotary encoder pulse number / Rot enc pulse No.

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** 4010, 4704

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	16777215	2048

Description: Sets the number of pulses for a rotary encoder.

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: The number of pole pairs for a resolver is entered here.

The smallest permissible value is 1 pulse.

p0410[0...n] Encoder inversion actual value / Enc inv act value

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704, 4710, 4711, 4715
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Setting to invert actual values.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Invert speed actual value	Yes	No	4710, 4711, 4715
01	Invert position actual value	Yes	No	4704

Note: The inversion influences the following parameters:

Bit 00: r0061, r0063 (exception: encoderless control), r0094

Bit 01: r0482, r0483

p0410[0...n] Encoder inversion actual value / Enc inv act value

ENC (Lin_enc)

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704, 4710, 4711, 4715
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Setting to invert actual values.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Invert velocity actual value	Yes	No	4710, 4711, 4715
01	Invert position actual value	Yes	No	4704

Note: The inversion influences the following parameters:

Bit 00: r0061, r0063 (exception: encoderless control), r0094

Bit 01: r0482, r0483

p0411[0...n] Measuring gear configuration / Meas gear config

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for position tracking of a measuring gear.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Measuring gear activate position tracking	Yes	No	-
01	Axis type	Linear axis	Rotary axis	-
02	Measuring gear reset position	Yes	No	-
03	Meas. gearbox, activate pos. tracking for incremental encoders	Yes	No	-

Notice: For p0411.3 = 1 the following applies:

If position tracking is activated for incremental encoders, only the position actual value is stored. Axis or encoder motion is not detected when de-activated! Any tolerance window entered in p0413 has no effect.

Note: For the following events, the non-volatile, saved position values are automatically reset:

- when an encoder replacement has been identified.

- when changing the configuration of the Encoder Data Set (EDS).

p0412[0...n] Measuring gear absolute encoder rotary revolutions virtual / Abs rot rev

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4194303	0

Description: Sets the number of rotations that can be resolved for a rotary encoder with activated position tracking of the measuring gear.

Dependency: This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking (p0411.0 = 1) and for an incremental encoder with activated position tracking (p0411.3 = 1).

Note: The resolution that is set must be able to be represented using r0483.

For rotary axes/modulo axes, the following applies:

p0411.0 = 1:

This parameter is pre-set with p0421 and can be changed.

p0411.3 = 1:

The parameter value is pre-set to the highest possible value. The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).

For linear axes, the following applies:

p0411.0 = 1:

This parameter is pre-assigned with p0421, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.

p0411.3 = 1:

The parameter value is pre-set to the highest possible value. The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).

p0413[0...n] Measuring gear position tracking tolerance window / Pos track window

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	4294967300.00	0.00

Description: Sets a tolerance window for position tracking.

After the system is powered up, the difference between the saved position and the actual position is determined, and depending on this, the following is initiated:

Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value.

Difference outside the tolerance window --> An appropriate message is output.

Caution: Rotation, e.g. through a complete encoder range is not detected.

Note: The value is entered in integer (complete) encoder pulses.

For p0411.0 = 1, the value is automatically pre-assigned quarter of the encoder range.

Example:

Quarter of the encoder range = (p0408 * p0421) / 4

It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

p0414[0...n] Redundant coarse position value relevant bits (identified) / Relevant bits

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	16	16

Description: Sets the number of relevant bits for the redundant coarse position value.

p0415[0...n] Gx_XIST1 Coarse position safe most significant bit (identified) / Gx_XIST1 safe MSB

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	31	14

Description: Sets the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.

Note: MSB: Most Significant Bit

p0416[0...n] Non safety-relevant meas. steps position value POS1 (detected) / nsrPos1

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4294967295	22000

Description: Sets the non safety-relevant measuring steps of POS1.

Dependency: Refer to: r0473, p9513

p0417[0...n] Encoder safety comparison algorithm (detected) / Safety comp_algo

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	255	255

Description: Sets the comparison algorithm for the encoder position monitoring functions.

Value:
0: SMx20 safety algorithm
10: DQL binary safety algorithm
11: DQL linear non-binary safety algorithm
12: SMC30 safety algorithm
255: Safety algorithm unknown

Dependency: Refer to: p9541

p0418[0...n] Fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** EDS, p0140	**Func. diagram:** 4010, 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
2	18	11

Description: Sets the fine resolution in bits of the incremental position actual values.

Note: The parameter applies for the following process data:

- Gx_XIST1
- Gx_XIST2 for reference mark or flying measurement

The fine resolution specifies the fraction between two encoder pulses. Depending on the physical measurement principle, an encoder pulse can be broken down into a different number of fractions (e.g. squarewave encoder: 2 bit = resolution 4, sin/cos encoder: Typical 11 bit = resolution 2048).

For a squarewave encoder, with the factory setting, the least significant bits have the value zero, i.e. they do not supply any useful information.

For especially high quality measuring systems, the fine resolution must be increased corresponding to the available accuracy.

p0419[0...n] Fine resolution absolute value Gx_XIST2 (in bits) / Enc fine Gx_XIST2

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704, 4710
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
2	18	9

Description: Sets the fine resolution in bits of the absolute position actual values.

Dependency: Refer to: p0418

Note: This parameter applies to process data Gx_XIST2 when reading the absolute value.

p0420[0...n] Encoder connection / Enc_connection

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Selecting the encoder connection.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	SUB-D	Yes	No	-
	01	Terminal	Yes	No	-

p0421[0...n] Absolute encoder rotary multiturn resolution / Enc abs multiturn

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4294967295	4096

Description: Sets the number of rotations that can be resolved for a rotary absolute encoder.

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0422[0...n] Absolute encoder linear measuring step resolution / Enc abs meas step

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [nm]	4294967295 [nm]	100 [nm]

Description: Sets the resolution of the absolute position for a linear absolute encoder.

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: The serial protocol of an absolute encoder provides the position with a certain resolution , e.g. 100 nm. This value must be entered here.

p0423[0...n] Absolute encoder rotary singleturn resolution / Enc abs singleturn

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1073741823	8192

Description: Sets the number of measuring steps per revolution for a rotary absolute encoder.

The resolution refers to the absolute position.

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0424[0...n] Encoder linear zero mark distance / Enc lin ZM_dist

ENC, VECTOR_G

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [mm]	65535 [mm]	20 [mm]

Description: Sets the distance between two zero marks for a linear encoder.

This information is used for zero mark monitoring.

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For distance-coded zero marks, this means the basic distance.

p0425[0...n] Encoder rotary zero mark distance / Enc rot dist ZM

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** 4704, 8570

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	16777215	2048

Description: Sets the distance in pulses between two zero marks for a rotary encoder. This information is used for zero mark monitoring.

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For distance-coded zero marks, this means the basic distance.

p0426[0...n] Encoder zero mark differential distance / Enc ZM Dif_dist

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	65535	1

Description: Sets the differential distance with distance-coded zero marks [signal periods].

The value corresponds to jump displacement of "zero mark with interference".

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0427[0...n] Encoder SSI baud rate / Enc SSI baud rate

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [kHz]	65535 [kHz]	100 [kHz]

Description: Sets the baud rate for an SSI encoder.

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: SSI: Synchronous Serial Interface

p0428[0...n] Encoder SSI monoflop time / Enc SSI t_monoflop

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [µs]	65535 [µs]	30 [µs]

Description: Sets the minimum delay time between two data transfers of the absolute value for an SSI encoder.

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0429[0...n] Encoder SSI configuration / Enc SSI config

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 bin

Description: Sets the configuration for an SSI encoder.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Transfer code	Binary code	Gray code	-
02	Transfer absolute value twice	Yes	No	-
06	Data line during the monoflop time	High level	Low level	-

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: Re bit 06:

The quiescent signal level of the data line corresponds to the inverted, set level.

p0430[0...n] Sensor Module configuration / SM config

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1110 0000 0000 1000 0000 0000 0000 0000 bin

Description: Sets the configuration of the Sensor Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
17	Burst oversampling	Yes	No	-
18	Continuous oversampling (reserved)	Yes	No	-
19	Safety position actual value sensing	Yes	No	-
20	Speed calculation mode (only SMC30)	Incremental diff	Flank time meas	-
21	Zero mark tolerance	Yes	No	-
22	Rot pos adapt	Yes	No	-
23	De-select commutation with zero mark	Yes	No	-
24	Commutation with selected zero mark	Yes	No	-
25	Switch off encoder voltage supply during parking	Yes	No	-
27	Extrapolate position values	Yes	No	-
28	Cubic correction	Yes	No	-
29	Phase correction	Yes	No	-
30	Amplitude correction	Yes	No	-
31	Offset correction	Yes	No	-

Notice: A bit-wise configuration is only possible if the corresponding property is also present in r0458.

Note: Re bit 17 (burst oversampling):

- if bit = 1, burst oversampling is switched on.

Re bit 18 (continuous oversampling):

- if bit = 1, continuous oversampling is switched on.

Re bit 19 (Safety position actual value sensing):

- if bit = 1, the Safety position actual value is transferred in the cyclic telegram.

Re bit 20 (speed calculation mode):

- if bit = 1, the speed is calculated via incremental difference without extrapolation.
- if bit = 0, the speed is calculated via edge time measurement with extrapolation. p0453 is effective in this mode.

Re bit 21 (zero mark tolerance):

- if bit = 1, a one-off zero mark distance error is tolerated. In the event of a defect, the fault F3x100/F3x101 does not appear, but alarm A3x400/A3x401 does.

Re bit 22 (rotor position adaptation):

- if bit = 1, the rotor position is corrected automatically. The correction speed is +/-1/4 encoder pulse per zero mark distance.

Re bit 23 (de-select commutation with zero mark):

- The bit should only be set for encoders that have not been adjusted.

Re bit 24 (commutation with selected zero mark):

- if bit = 1, the commutation position is corrected via a selected zero mark.

Re bit 25 (disconnect the encoder power supply on parking):

- if bit = 1, the encoder power supply is switched off on parking (0 V).
- if bit = 0, the encoder power supply is not switched off on parking, it is reduced from 24 V to 5 V.

Re bit 27 (extrapolate position values):

- if bit = 1, the extrapolation of the position values is activated.

Re bit 28 (cubic correction);

- if bit = 1, the cubic correction for track A/B sine is activated.

Re bit 29 (phase correction):

- if bit = 1, the phase correction for track A/B sine is activated.

Re bit 30 (amplitude correction):

- if bit = 1, the amplitude correction for track A/B sine is activated.

Re bit 31 (offset correction):

- if bit = 1, the offset correction for track A/B sine is activated.

p0430[0...n] Sensor Module configuration / SM config

ENC (Lin_enc)

Re bit 29 (phase correction):
- if bit = 1, the phase correction for track A/B sine is activated.
Re bit 30 (amplitude correction):
- if bit = 1, the amplitude correction for track A/B sine is activated.
Re bit 31 (offset correction):
- if bit = 1, the offset correction for track A/B sine is activated.

p0431[0...n] Angular commutation offset / Ang_com offset

VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-180.00 [°]	180.00 [°]	0.00 [°]

Description: Sets the angular commutation offset.

Dependency: The value is taken into account in r0094.

Refer to: r0094, r1778

Notice: When the firmware is upgraded from V2.3 to V2.4 or higher, the value must be reduced by 60° if all the following conditions are fulfilled:

- The motor is a synchronous motor (p0300 = 2, 2xx, 4, 4xx).
- The encoder is a resolver (p0404.23 = 1).
- The actual speed value is inverted (p0410.0 = 1).

The angular commutation offset cannot be generally taken from other drive systems. As a minimum - the sign of the offset determined for SIMODRIVE 611 digital and SIMODRIVE 611 universal must be reversed for SINAMICS (p0431 (SINAMICS) = -p1016 (SIMODRIVE)).

Note: Angular commutation offset, angular difference between electrical position of encoder and flux position.

For p0404.5 = 1 (track C/D) the following applies:

The angular offset in p0431 acts on track A/B, the zero mark on track C/D.

For p0404.6 = 1 (Hall sensor) the following applies:

The angular offset in p0431 acts on track A/B and the zero mark.

p0432[0...n]	Gearbox factor encoder revolutions / Grbx_fact enc_rev		
ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	10000	1

Description: Sets the encoder revolutions for the gearbox factor of the encoder evaluation.

The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.

Dependency: This parameter can only be set for p0402 = 9999.

Refer to: p0402, p0410, p0433

Note: Negative gearbox factors should be implemented with p0410.

p0433[0...n]	Gearbox factor motor/load revolutions / Grbx_fact mot_rev		
ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	10000	1

Description: Sets the motor and load revolutions for the gearbox factor of the encoder evaluation.

The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.

Dependency: This parameter can only be set for p0402 = 9999.

Refer to: p0402, p0410, p0432

Note: Negative gearbox factors should be implemented with p0410.

p0434[0...n]	Encoder SSI error bit / Enc SSI error bit		
ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Sets the position and level of the error bit in the SSI protocol.

Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.

Note: Value = dcba

ba: Position of the error bit in the protocol (0 ... 63).

c: Level (0: Low level, 1: High level).

d: Status of the evaluation (0: Off, 1: On with 1 error bit, 2: On with 2 error bits ... 9: On with 9 error bits).

For several error error bits, the following applies:

- the position specified under ba and the additional bits are assigned increasing consecutively.
- the level set under c applies to all error bits.

Example:

p0434 = 1013

--> The evaluation is switched in and the error bit is at position 13 with a low level.

p0434 = 1113

--> The evaluation is switched in and the error bit is at position 13 with a high level.

p0435[0...n]	**Encoder SSI alarm bit / Enc SSI alarm bit**		
ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Sets the position and level of the alarm bit in the SSI protocol.

Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.

Note: Value = dcba

ba: Position of the alarm bit in protocol (0 ... 63).

c: Level (0: Low level, 1: High level).

d: State of the evaluation (0: Off, 1: On).

Example:

p0435 = 1014

--> The evaluation is switched in and the alarm bit is at position 14 with a low level.

p0435 = 1114

--> The evaluation is switched in and the alarm bit is at position 14 with a high level.

p0436[0...n]	**Encoder SSI parity bit / Enc SSI parity bit**		
ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Sets the position and parity of the parity bit in the SSI protocol.

Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.

Note: Value = dcba

ba: Position of the parity bit in the protocol (0 ... 63).

c: Parity (0: even, 1: uneven).

d: State of the evaluation (0: Off, 1: On).

Example:

p0436 = 1015

--> The evaluation is switched in and the parity bit is at position 15 with even parity.

p0436 = 1115

--> The evaluation is switched in and the parity bit is at position 15 with uneven parity.

p0437[0...n]	**Sensor Module configuration extended / SM config ext**		
ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0011 0000 0000 0000 0000 1000 0000 0000 bin

Description: Sets the extended configuration of the Sensor Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Data logger	Yes	No	-
01	Zero mark edge detection	Yes	No	-
02	Correction position actual value XIST1	Yes	No	-
04	Edge evaluation bit 0	Yes	No	-
05	Edge evaluation bit 1	Yes	No	-

06	Freeze the speed actual value for dn/dt errors	Yes	No	-
07	Accumulate uncorrected encoder pulses	Yes	No	-
11	Fault handling after PROFIdrive	Yes	No	-
12	Activate additional messages	Yes	No	-
13	Support absolute position for incremental encoder	Yes	No	4750
25	Deselect monitoring multiturn representation in Gx_XIST2	Yes	No	-
26	Deselect track monitoring	Yes	No	-
28	EnDat linear encoder monitoring incremental/absolute	Yes	No	-
29	EnDat encoder initialization with high accuracy	Yes	No	-
31	Analog unipolar track monitoring	Yes	No	-

Dependency: Refer to: p0430, r0459

Note: A value of zero is displayed if an encoder is not present.

Re bit 00:

When the data logger (trace) is activated, in the case of a fault, data before and after the event are recorded (traced) and saved in files on the non-volatile memory medium. Experts can then evaluate this data.

Re bit 01:

If bit = 0, the zero mark is evaluated by ANDing tracks A and B and the zero mark.

For bit = 1, the zero mark is evaluated depending on the direction of rotation detected. For a positive direction of rotation, the positive edge of the zero mark is considered and for a negative direction of rotation, the negative edge of the zero mark.

Re bit 02:

If the bit is set, in the event of a deviation less than the tolerance window for the zero mark (p4681, p4682), the pulses per revolution are corrected. If the bit is not set, encoder fault F3x131 is triggered.

Re bits 05, 04:

The actual hardware only supports 1x or 4x signal evaluation.

Bit 5/4 = 0/0: Signal evaluation per period, 4x.

Bit 5/4 = 1/0: Illegal setting.

Bit 5/4 = 0/1: Signal evaluation per period, 1x.

Bit 5/4 = 1/1: Illegal setting.

Re bit 06:

If the function is active, when dn/dt monitoring responds, the speed actual value is internally frozen for a time equivalent to two current controller clock cycles. The rotor position continues to be integrated. The actual value is then re-enabled after this time has expired.

Re bit 07:

If the bit is set, the encoder pulses which have not been corrected are added to p4688 at the zero mark.

Re bit 11:

If the bit is set, the Sensor Module checks within a certain time grid whether the fault cause is still present. This enables the Sensor Module to switch from the fault state to the operating state and provide valid actual values automatically. The faults are displayed until the user acknowledges them.

Re bit 12:

Additional fault messages can be activated for extended fault diagnostics.

Re bit 13:

When the bit is set, for an incremental encoder with zero mark, the absolute value in Gn_XIST2 can be requested via Gn_STW.13.

Re bit 26:

Track monitoring is de-activated for the square-wave encoders when the bit is set, even if the monitoring function is selected in p0405.2.

Re bit 28:

Monitoring of the difference between incremental and absolute position in the case of linear encoders.

Re bit 29:

When the bit is set, the EnDat encoder is initialized under a certain speed and, therefore, with high accuracy. If initialization at a higher speed is requested, fault F31151, F32151, or F33151 is output.

Re bit 31:

When monitoring is active, the levels of the individual track signals and the corresponding inverted track signals are monitored separately.

p0437[0...n] Sensor Module configuration extended / SM config ext

ENC (Lin_enc)

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3

0.00 [µs]	100.00 [µs]	0.64 [µs]

Description: Sets the filter time for a squarewave encoder.

The hardware of the squarewave encoder only supports the following values:

0: No filtering

0.04 µs

0.64 µs

2.56 µs

10.24 µs

20.48 µs

Dependency: Refer to: r0452

Notice: If the filter time is too long, the track signals A/B/R may be suppressed and the appropriate messages output.

Note: The most suitable filter time depends on the number of pulses and maximum speed of the square-wave encoder.

The filter time is automatically corrected to the next value when entering a non-specified value. In this case, no message is output.

The effective filter time is displayed in r0452.

p0439[0...n] Encoder ramp-up time / Enc ramp-up time

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	65535 [ms]	0 [ms]

Description: Sets the ramp-up time for the encoder.

The encoder supplies stable track signals once this time has elapsed.

Note: This parameter is automatically pre-set for encoders from the encoder list (p0400).

p0440[0...n] Copy encoder serial number / Copy enc ser_no

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Copies the actual serial number of the encoder belonging to this Encoder Data Set (EDS) to p0441 ... p0445.

Example:

For p0440[0] = 1, the serial number of the encoder belonging EDS0 is copied to p0441[0] ... p0445[0].

Value:
0: No action
1: Transfer serial number

Dependency: Refer to: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0463, r0464, p1990

Note: For encoders with serial number, encoder replacement is monitored in order to request angular commutation calibration (adjustment) for motor encoders and absolute calibration for direct measuring systems with absolute value data. The serial number, which from then onwards is used for monitoring purposes, can be transferred using p0440.

In the following cases, copying is automatically started in the following cases:

1.) When commissioning 1FT6, 1FK6, 1FK7 motors.

2.) When writing into p0431.

3.) For p1990 = 1.

p0440 is automatically set to 0 when the copying has been completed.

In order to permanently accept the copied values, it is necessary to save in a non-volatile fashion (p0977).

p0441[0...n] Encoder commissioning serial number part 1 / Enc comm ser_no 1

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** CALC_MOD_ALL	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0000 hex	FFFF FFFF hex	0000 hex

Description: Serial number part 1 of the encoder for the commissioning.

Dependency: Refer to: p0440, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0463, r0464

Note: A value of zero is displayed if an encoder is not present.

p0442[0...n] Encoder commissioning serial number part 2 / Enc comm ser_no 2

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** CALC_MOD_ALL	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0000 hex	FFFF FFFF hex	0000 hex

Description: Serial number part 2 of the encoder for the commissioning.

Dependency: Refer to: p0440, p0441, p0443, p0444, p0445, r0460, r0461, r0462, r0463, r0464

Note: A value of zero is displayed if an encoder is not present.

p0443[0...n] Encoder commissioning serial number part 3 / Enc comm ser_no 3

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** CALC_MOD_ALL	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0000 hex	FFFF FFFF hex	0000 hex

Description: Serial number part 3 of the encoder for the commissioning.

Dependency: Refer to: p0440, p0441, p0442, p0444, p0445, r0460, r0461, r0462, r0463, r0464

Note: A value of zero is displayed if an encoder is not present.

p0444[0...n] Encoder commissioning serial number part 4 / Enc comm ser_no 4

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** CALC_MOD_ALL	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0000 hex	FFFF FFFF hex	0000 hex

Description: Serial number part 4 of the encoder for the commissioning.

Dependency: Refer to: p0440, p0441, p0442, p0443, p0445, r0460, r0461, r0462, r0463, r0464

Note: A value of zero is displayed if an encoder is not present.

p0445[0...n]	**Encoder commissioning serial number part 5 / Enc comm ser_no 5**		
ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** CALC_MOD_ALL	**Access level:** 4
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0000 hex	FFFF FFFF hex	0000 hex

Description: Serial number part 5 of the encoder for the commissioning.

Dependency: Refer to: p0440, p0441, p0442, p0443, p0444, r0460, r0461, r0462, r0463, r0464

Note: A value of zero is displayed if an encoder is not present.

p0446[0...n]	**Encoder SSI number of bits before the absolute value / Enc SSI bit before**		
ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Sets the number of bits before the absolute value in the SSI protocol.

Notice: When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: This parameter is automatically pre-set for encoders from the encoder list (p0400).

For example, error bit, alarm bit or parity bit can be positioned at these bits.

p0447[0...n]	**Encoder SSI number of bits absolute value / Enc SSI bit val**		
ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	25

Description: Sets the number of bits for the absolute value in the SSI protocol.

Notice: When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: This parameter is automatically pre-set for encoders from the encoder list (p0400).

p0448[0...n]	**Encoder SSI number of bits after the absolute value / Enc SSI bit after**		
ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Sets the number of bits after the absolute value in the SSI protocol.

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For example, error bit, alarm bit or parity bit can be positioned at these bits.

p0449[0...n] Encoder SSI number of bits filler bits / Enc SSI fill bits

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	1

Description: Sets the number of filler bits for double absolute value transfer in the SSI protocol.

Dependency: Refer to: p0429

Notice: This parameter is automatically pre-set for encoders from the encoder list (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: This parameter is only of significance for p0429.2 = 1.

r0451[0...2] Commutation angle factor / Enc commut_factor

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 4710
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the relationship between the electrical and mechanical pole positions.

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Note: A value of zero is displayed if an encoder is not present.

r0452 Squarewave encoder filter time display / Enc t_filt displ

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [µs]	- [µs]	- [µs]

Description: Displays the effective filter time for a squarewave encoder.

The filter time is set using p0438.

Dependency: Refer to: p0438

Note: A value of zero is displayed if an encoder is not present.

r0452[0...2] Squarewave encoder filter time display / Enc t_filt displ

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [µs]	- [µs]	- [µs]

Description: Displays the effective filter time for a squarewave encoder.

The filter time is set using p0438.

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0438

Note: A value of zero is displayed if an encoder is not present.

p0453[0...n] Pulse encoder evaluation zero speed measuring time / Enc_ev n_0 t_meas

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.10 [ms]	10000.00 [ms]	1000.00 [ms]

Description: Sets the measuring time for evaluating zero speed.

If no pulses are detected from track A/B during this time, a speed actual value of zero is output.

Dependency: Refer to: r0452

Note: This function is required for slow-running motors so that actual speeds close to zero can be output correctly.

r0455 Encoder configuration recognized / Enc config act

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the detected encoder configuration.

In this case, the encoder must automatically support the function (e.g. encoder with EnDat interface).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Linear encoder	Yes	No	-
01	Absolute encoder	Yes	No	-
02	Multiturn encoder	Yes	No	-
03	Track A/B sq-wave	Yes	No	-
04	Track A/B sine	Yes	No	-
05	Track C/D	Yes	No	-
06	Hall sensor	Yes	No	-
08	EnDat encoder	Yes	No	-
09	SSI encoder	Yes	No	-
10	DRIVE-CLiQ encoder	Yes	No	-
11	Digital encoder	Yes	No	-
12	Equidistant zero mark	Yes	No	-
13	Irregular zero mark	Yes	No	-
14	Distance-coded zero mark	Yes	No	-
15	Commutation with zero mark (not ASM)	Yes	No	-
16	Acceleration	Yes	No	-
17	Track A/B analog	Yes	No	-
20	Voltage level 5 V	Yes	No	-
21	Voltage level 24 V	Yes	No	-
22	Remote sense (only SMC30)	Yes	No	-
23	Resolver excit	Yes	No	-

Dependency: Refer to: p0404

Note: ZM: Zero mark

This parameter is only used for diagnostics.

A value of zero is displayed if an encoder is not present.

Re bit 20, 21 (voltage level 5 V, voltage level 24 V):

The voltage level cannot be detected. Therefore, these bits are always set to 0.

r0455[0...2] Encoder configuration recognized / Enc config act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the detected encoder configuration.

In this case, the encoder must automatically support the function (e.g. encoder with EnDat interface).

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Linear encoder	Yes	No	-
01	Absolute encoder	Yes	No	-
02	Multiturn encoder	Yes	No	-
03	Track A/B sq-wave	Yes	No	-
04	Track A/B sine	Yes	No	-
05	Track C/D	Yes	No	-
06	Hall sensor	Yes	No	-
08	EnDat encoder	Yes	No	-
09	SSI encoder	Yes	No	-
10	DRIVE-CLiQ encoder	Yes	No	-
11	Digital encoder	Yes	No	-
12	Equidistant zero mark	Yes	No	-
13	Irregular zero mark	Yes	No	-
14	Distance-coded zero mark	Yes	No	-
15	Commutation with zero mark (not ASM)	Yes	No	-
16	Acceleration	Yes	No	-
17	Track A/B analog	Yes	No	-
20	Voltage level 5 V	Yes	No	-
21	Voltage level 24 V	Yes	No	-
22	Remote sense (only SMC30)	Yes	No	-
23	Resolver excit	Yes	No	-

Dependency: Refer to: p0404

Note: ZM: Zero mark

This parameter is only used for diagnostics.

A value of zero is displayed if an encoder is not present.

Re bit 20, 21 (voltage level 5 V, voltage level 24 V):

The voltage level cannot be detected. Therefore, these bits are always set to 0.

r0456 Encoder configuration supported / Enc_config supp

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3

30	Amplitude correction	Yes	No	-
31	Offset correction	Yes	No	-

Dependency: Refer to: p0437, p0600, p0601

Note: A value of zero is displayed if an encoder is not present.

Re bit 11:

When the property is set, the following parameters can be changed without the actual value in the encoder interface becoming invalid (state r0481.14 = 1 "parking encoder active"):

p0314, p0315, p0430, p0431, p0441, p0442, p0443, p0444, p0445

Re bit 12:

The extended functions can be configured using p0437.

Re bit 13:

Encoder faults can be acknowledged via Gn_STW.15.

Re bit 14:

Only for internal Siemens use.

Re bit 23:

When the property is set, commutation with zero mark can be de-selected using p0430.23.

Re bit 24:

If the property is set, commutation to the selected zero mark can be carried out.

Note: The increments are displayed in the format the same as r0483. The position difference should be read in encoder increments.

r0479 — CO: Diagnostics encoder position actual value Gn_XIST1 / Diag Gn_XIST1

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the encoder actual position value Gn_XIST1 according to PROFIdrive for diagnostics.

In contrast to r0482, the value is updated in each DRIVE-CLiQ basic clock cycle and displayed with sign.

Caution: Following ramping-up or after a data set changeover, the new value is present at connector inputs which are interconnected to connector output r0479 and under certain circumstances take 100 ms to become available.

Reason:

These interconnections are updated in the background, unlike interconnections involving other connector outputs (e.g. CO: r0482).

The value is immediately available when non-cyclically reading r0479 (e.g. via the expert list).

13	Absolute value cyclically	Displayed in r0483	No	-
14	Parking encoder active	Yes	No	-
15	Encoder fault	Displayed in r0483	None	-

Notice: Information on Gn_STW/Gn_ZSW can, e.g. be found in the following literature:

SINAMICS S120 Function Manual Drive Functions

Note: Re bit 14:

Displays the acknowledgement for "activate parking encoder" (Gn_STW.14 = 1) or encoder position actual value (Gn_XIST1) invalid.

Re bit 14, 15:

r0481.14 = 1 and r0481.15 = 0 can have one of the following causes:

- the encoder is parked.
- the encoder is de-activated.
- the encoder is being commissioned.
- no parameterized encoder available.
- encoder data set is being changed over.

r0481.14 = 1 and r0481.15 = 1 has the following significance:

An encoder error has occurred and the encoder position actual value (Gn_XIST1) is invalid.

- encoder data set is being changed over.

r0481.14 = 1 and r0481.15 = 1 has the following significance:

An encoder error has occurred and the encoder position actual value (Gn_XIST1) is invalid.

r0482 CO: Encoder actual position value Gn_XIST1 / Enc Gn_XIST1

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 4704, 4735, 4740, 4750
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the encoder actual position value Gn_XIST1 according to PROFIdrive.

Note: - this value is reset if necessary when the "parking encoder" (r0481.14) function is de-selected.

- in this value, the measuring gear (p0432, p0433) is only taken into account when the position tracking is activated (p0411.0 = 1).
- The update time for the position control (EPOS) corresponds to the position controller clock cycle p0115[4].
- The update time in isochronous operation corresponds to the bus cycle time r2064[1].

- The update time in isochronous operation and with position control (EPOS) corresponds to the position controller clock cycle p0115[4].

- The update time in non-isochronous operation or without position control (EPOS) comprises the following:

Update time = 4 * least common multiple (LCM) of all current controller clock cycles (p0115[0]) in the drive group (infeed + drives). The minimum update time is 1 ms.

Example 1: infeed, servo

Update time = 4 * LCM(250 µs, 125 µs) = 4 * 250 µs = 1 ms

Example 2: infeed, servo, vector

Update time = 4 * LCM(250 µs, 125 µs, 500 µs) = 4 * 500 µs = 2 ms

r0482[0...2] CO: Encoder actual position value Gn_XIST1 / Enc Gn_XIST1

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the encoder actual position value Gn_XIST2 according to PROFIdrive.

Recommend.: Possible causes:

Re Error code = 4097, 4098: Defective Control Unit hardware.

Re Error codes = 4099, 4100: Too many measuring pulses have occurred.

Notice: The encoder position actual value must be requested using the encoder control word Gn_STW.13.

Note: - in this value, the measuring gear (p0432, p0433) is only taken into account when the position tracking is activated (p0411.0 = 1).

- if GxZSW.15 = 1 (r0481), then an error code with the following significance is located in Gx_XIST2 (r0483):

1: Encoder fault.

2: Possible position shift in Gx_XIST1.

3: Encoder parking not possible.

4: Cancellation, reference block search (e.g. reference mark not available or input terminal for external zero mark not set). Zero mark is requested, however according to p0404.12/13/14 there is no zero mark (alarm A07565).

5: Cancellation, fetch reference value (e.g. illegal change from reference mark search to flying measurement).

6: Cancellation, flying measurement (e.g. input terminal for probe not set).

7: Cancellation, fetch measured value (e.g. illegal change from flying measurement to reference mark search).

8: Abort, absolute value transfer.

3841: Function not supported.

4097: Abort, reference mark search due to an initialization error.

4098: Abort, flying measurement due to an initialization error.

4099: Abort, reference mark search due to a measuring error.

4100: Abort, flying measurement due to a measuring error.

r0487[0...2]	Diagnostic encoder control word Gn_STW / Enc Gn_STW		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 4700, 4704, 4720, 4740
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the encoder control word Gn_STW according to PROFIdrive for diagnostics.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Request function 1	Yes	No	-
01	Request function 2	Yes	No	-
02	Request function 3	Yes	No	-
03	Request function 4	Yes	No	-
04	Request command bit 0	Yes	No	-
05	Request command bit 1	Yes	No	-
06	Request command bit 2	Yes	No	-
07	Flying measurement mode/search for reference mark	Flying measurement	Reference marks	-
13	Request absolute value cyclic	Yes	No	-
14	Request parking encoder	Yes	No	-
15	Request acknowledge encoder fault	Yes	No	-

Notice: Information on Gn_STW/Gn_ZSW should be taken from the corresponding product documentation.

Note: The signal source for the encoder control word is set with p0480.

p0488 Measuring probe 1 input terminal / Meas probe 1 inp

ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 4740
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	8	0

Description: Sets the input terminal to connect probe 1.

Value:
0: No meas probe
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Dependency: Refer to: p0489, p0728

Notice: To the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
Refer to the encoder interface for PROFIdrive.
If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

p0488[0...2] Measuring probe 1 input terminal / Meas probe 1 inp

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 4740
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	8	0

Description: Sets the input terminal to connect probe 1.

Value:
0: No meas probe
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)

4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0489, p0728

Notice: To the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
Refer to the encoder interface for PROFIdrive.
If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

p0489 Measuring probe 2 input terminal / Meas probe 2 inp

ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 4740
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	8	0

Description: Sets the input terminal to connect probe 2.

Value:
0: No meas probe
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Dependency: Refer to: p0488, p0728

Notice: To the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
Refer to the encoder interface for PROFIdrive.
If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

p0489[0...2] Measuring probe 2 input terminal / Meas probe 2 inp

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 4740
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	8	0

Description: Sets the input terminal to connect probe 2.

Value:
0: No meas probe
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)

4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0488, p0728

Notice: To the terminal designation:

The first designation is valid for CU320, the second for CU310.

To select the values:

For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output

The terminal must be set as input (p0728).

Refer to the encoder interface for PROFIdrive.

If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

p0491 Motor encoder fault response ENCODER / Fault resp ENCODER

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	5	0

Description: Sets the behavior for the ENCODER fault response (motor encoder).

This means, for example, if an encoder fault occurs, encoderless operation can be automatically selected with a shutdown behavior that can be selected.

Value:
0: Encoder fault results in OFF2
1: Enc fault results in encoderless oper. and oper. continues
2: Encoder fault results in encoderless operation and OFF1
3: Encoder fault results in encoderless operation and OFF3
4: Encoder fault results in an armature short-cct int/DC braking
5: Enc fault results in encoderless op, operation continues, alarm

Dependency: The following parameters are relevant for encoderless operation.

Refer to: p0341, p0342, p1470, p1472, p1517, p1612, p1755

Caution: For a value = 1, 2, 3, 5 the following applies:

- encoderless operation must have been started.

For a value = 1, the following applies:

- in spite of the motor encoder fault that has occurred, the motor continues to operate.

Note: For a value = 1, 2, 3, 5 the following applies:

- Refer to the status signal "encoderless operation due to a fault" (BO: r1407.13).

- If, with r1407.13 = 1, a different drive data set is selected (e.g. interconnection from p0820), then the open-loop or closed-loop control type p1300 of this data set must match that of the original data set (e.g. p1300 = 21). Encoderless closed-loop controlled operation is kept when changing over.

- Not possible for separately excited synchronous motors (p0300 = 5).

For a value = 4, the following applies:

- The value can only be set for all motor data sets when p1231 = 3, 4.

- For synchronous motors, an armature short circuit is initiated on an encoder fault.

- For induction motors, DC braking is initiated on an encoder fault. DC braking must be commissioned (p1232, p1233, p1234).

For a value = 5, the following applies:

Same function as for value = 1. However, encoder faults are output as alarm and the message bit "Fault active" (r2139.3) is not set. The encoder fault has to be acknowledged via the encoder interface in order to resume operation with encoder.

p0492 Square-wave encoder maximum speed difference per sampling cycle / n_dif max/samp_cyc

ENC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the maximum permissible speed difference within the current controller sampling time for squarewave encoders.

Note: For a value of 0.0, the speed change monitoring is disabled.

if the set maximum speed difference is only exceeded for one sampling time of the current controller, then an appropriate alarm is output. However, if the maximum speed difference is exceeded over several sampling times, then a corresponding fault is output.

p0492 Square-wave encoder max. velocity difference per sampling cycle / v_dif max/samp_cyc

ENC (Lin_enc)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [m/min]	1000.00 [m/min]	0.00 [m/min]

Description: Sets the maximum permissible velocity difference within the current controller sampling time for square-wave encoders.

Note: For a value of 0.0, velocity change monitoring is disabled.

if the set maximum velocity difference is only exceeded for one sampling time of the current controller, then an appropriate alarm is output. However, if the maximum speed difference is exceeded over several sampling times, then a corresponding fault is output.

p0492 Maximum speed difference per sampling cycle / n_dif max/samp_cyc

VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the maximum permissible speed difference within the current controller sampling time.

Dependency: Refer to: r1408

Note: For a value of 0.0, the speed change monitoring is disabled.

The following applies for square-wave encoders:

If the speed difference exceeds the threshold value p0492, depending on p0491, either encoderless closed-loop speed/torque control is selected or the drive is powered down with fault F3x118.

The following applies for other speed encoders:

If the speed difference exceeds threshold value p0492, in order to avoid subsequent faults, the old speed actual value is kept and after time p2178 shut down with fault F07902 (motor stalled).

p0493 Zero mark selection input terminal / ZM_sel inp_term

ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	8	0

Description: Sets the input terminal for selecting the reference mark via BERO/switching signal when performing referencing with several zero marks.

The encoder interface supplies the position of the reference mark, which was detected immediately after the positive edge of the BERO signal.

Value:
0: No selection via BERO
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Notice: For CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

To the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: Refer to the encoder interface for PROFIdrive.

The terminal must be set as input (p0728).

For p0493 = 0 (factory setting) the following applies:

- there is no logic operation between the reference mark search and an input signal.

For p0493 > 0, the following applies:

- the positive edge of the input signal is evaluated. If the negative edge is to be evaluated, signal inversion must be parameterized via p0490.

- if a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0580, p0680, p2517, or p2518.

p0493[0...n] Zero mark selection input terminal / ZM_sel inp_term

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	8	0

Description: Sets the input terminal for selecting the reference mark via BERO/switching signal when performing referencing with several zero marks.

The encoder interface supplies the position of the reference mark, which was detected immediately after the positive edge of the BERO signal.

Value:
0: No selection via BERO
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Notice: For CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

To the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: Refer to the encoder interface for PROFIdrive.

The terminal must be set as input (p0728).

For p0493 = 0 (factory setting) the following applies:

- there is no logic operation between the reference mark search and an input signal.

For p0493 > 0, the following applies:

- the positive edge of the input signal is evaluated. If the negative edge is to be evaluated, signal inversion must be parameterized via p0490.

- if a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0580, p0680, p2517, or p2518.

p0494[0...n] Equivalent zero mark input terminal / ZM_equiv inp_term

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	8	0

Description: Selects the input terminal for connecting an equivalent zero mark (external encoder zero mark).

Value:
0: No equivalent zero mark (evaluation of the encoder zero mark)
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Notice: For CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

For p0494 = 0 (factory setting), the setting in p0495 is effective.

To the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: Refer to the encoder interface for PROFIdrive.

The terminal must be set as input.

p0495 Equivalent zero mark input terminal / ZM_equiv input

ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 4735
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	8	0

Description: Selects the input terminal for connecting an equivalent zero mark (external encoder zero mark).

Value:
0: No equivalent zero mark (evaluation of the encoder zero mark)
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Notice: For CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

For p0494 > 0, the setting in p0494 is effective and p0495 is invalid.

To the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: Refer to the encoder interface for PROFIdrive.

The terminal must be set as input.

For p0495 = 0 (factory setting), the encoder zero mark is evaluated as zero mark.

For p0495 > 0, the following applies:

Depending on the direction of motion, the positive or negative edge at the appropriate input is evaluated.

- increasing position actual values (r0482) --> the 0/1 edge is evaluated.
- decreasing position actual values (r0482) --> the 1/0 edge is evaluated.

Only one zero mark is supported. If function 2, 3 or 4 is selected, this results in a fault message in Gn_ZSW.

The inversion of the inputs via p0490 affects the function "referencing with equivalent zero mark". This is the reason that the edge evaluation is interchanged as a function of the direction of motion.

An input can only be assigned to one encoder as measuring probe 1, 2 or equivalent zero mark. Exception: The same encoder can be simultaneously used as measuring probe and equivalent zero mark as both functions cannot be simultaneously requested.

p0495[0...2] Equivalent zero mark input terminal / ZM_equiv input

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 4735
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	8	0

Description: Selects the input terminal for connecting an equivalent zero mark (external encoder zero mark).

Value:
0: No equivalent zero mark (evaluation of the encoder zero mark)
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0494

Notice: For CX32, NX10 and NX15, only DI/DO 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

For p0494 > 0, the setting in p0494 is effective and p0495 is invalid.

To the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: Refer to the encoder interface for PROFIdrive.

The terminal must be set as input.

For p0495 = 0 (factory setting), the encoder zero mark is evaluated as zero mark.

For p0495 > 0, the following applies:

Depending on the direction of motion, the positive or negative edge at the appropriate input is evaluated.

- increasing position actual values (r0482) --> the 0/1 edge is evaluated.
- decreasing position actual values (r0482) --> the 1/0 edge is evaluated.

Only one zero mark is supported. If function 2, 3 or 4 is selected, this results in a fault message in Gn_ZSW.

The inversion of the inputs via p0490 affects the function "referencing with equivalent zero mark". This is the reason that the edge evaluation is interchanged as a function of the direction of motion.

An input can only be assigned to one encoder as measuring probe 1, 2 or equivalent zero mark. Exception: The same encoder can be simultaneously used as measuring probe and equivalent zero mark as both functions cannot be simultaneously requested.

p0496 Encoder diagnostic signal selection / Enc diag select

ENC			
	Can be changed: U, T	**Calculated:** -	**Access level:** 4

Description: Displays the trace signal for encoder diagnostics (high component).

The signal to be output is selected in p0496.

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0496, r0497, r0498

p0500 Technology application / Tec application

VECTOR_G

Can be changed: C2(1, 5), T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4	1

Description: Sets the technology application.

The parameter influences the calculation of open-loop and closed-loop control parameters that is e.g. initiated using p0578.

Value:
0: Standard drive (VECTOR)
1: Pumps and fans
2: Sensorless closed-loop control down to f = 0 (passive loads)
4: Dynamic in the field weakening range

Dependency: Refer to: p2175, p2177

Note: The calculation of parameters dependent on the technology application can be called up as follows:

- when exiting quick commissioning using p3900 > 0
- when writing p0340 = 1, 3, 5
- when writing p0578 = 1

For p0500 = 0, 5 and when the calculation is initiated, the following parameters are set:

p1574 = 10 V (separately-excited synchronous motor: 20 V)

p1611 = 80% (only p0500 = 5)

p1750.2 = 0

p1802 = 4 (SVM/FLB without overcontrol)

p1803 = 106 %

For p0500 = 1 and when the calculation is initiated, the following parameters are set:

p1574 = 2 V (separately-excited synchronous motor: 4 V)

p1750.2 = 0

p1802 = 9 (edge modulation), if r0192.0 = 1

p1802 = 4, if r0192.0 = 0

p1803 = 106 %

For p0500 = 2 and when the calculation is initiated, the following parameters are set:

p1574 = 2 V (separately-excited synchronous motor: 4 V)

p1750.2 = 1: Encoderless control of the induction motor is effective down to zero frequency.

This operating mode is possible for passive loads. These include applications where the load does not generate regenerative torque when breaking away and the motor comes to a standstill (zero speed) itself when the pulses are inhibited.

p1802 = 4 (SVM/FLB without overcontrol)

p1803 = 106 %

The setting of p1750 is only relevant for induction motors.

p1802 and p1803 are only changed, in all cases, if a sine-wave output filter (p0230 = 3, 4) has not been selected.

For p0500 = 4: (presetting for VECTOR with PM250 power unit)

p1574 = 30 V

p1750.2 = 0

p1802 = 2 (SVM with overcontrol)

p1803 = 106 %

p0505 Selecting the system of units / Unit sys select

B_INF, ENC, VECTOR_G	**Can be changed:** C2(5)	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Applications	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	4	1

Description: Sets the actual system of units.

Value:
1: SI system of units
2: System of units referred/SI
3: US system of units
4: System of units referred/US

Dependency: The parameter can only be changed in an offline project using the commissioning software.

Caution: If a per unit representation is selected and if the reference parameters (e.g. p2000) are subsequently changed, then the physical significance of several control parameters is also adapted at the same time. As a consequence, the control behavior can change (see p1576, p1621, p1744, p1752, p1755 and p1609, p1612, p1619, p1620).

Note: Reference parameter for the unit system % are, for example, p2000 ... p2004. Depending on what has been selected, these are displayed using either SI or US units.

p0514[0...9] User-specific reference quantities / Usrdef_ref

B_INF, VECTOR_G	**Can be changed:** T	**Calculated:** CALC_MOD_ALL	**Access level:** 3

p0528 Controller gain system of units / Ctrl_gain unit_sys

ENC

Can be changed: C2(5)	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the system of units for the controller gains.

Value:
0: Representation physical/% (p0505)
1: Representation no dimensions (referred)

Note: For p0528 = 0 (physical/%), the following applies:
Using p0505, the dependent parameters can be changed over between physical and % representation.
For SERVO (r0107) the following applies:
The parameter is pre-assigned a value of 0 and cannot be changed.

p0528 Controller gain system of units / Ctrl_gain unit_sys

VECTOR_G

Can be changed: C2(5)	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	1

Description: Sets the system of units for the controller gains.

Value:
0: Representation physical/% (p0505)
1: Representation no dimensions (referred)

Note: For VECTOR (r0107) the following applies:
The parameter is pre-assigned a value of 1 and cannot be changed.

p0530[0...n]	**Bearing version selection / Bearing vers sel**		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	104	0

Description: Sets the bearing version.

Corresponding to the bearing version entered, its code number (p0531) is automatically set.

0 = No selection

1 = Manual entry

101 = STANDARD

102 = PERFORMANCE

103 = HIGH PERFORMANCE

104 = ADVANCED LIFETIME

Dependency: Refer to: p0301, p0531, p0532, p1082

Notice: For p0530 = 101, 102, 103, 104, the maximum bearing speed (p0532) is write protected. Write protection is withdrawn with p0530 = 1.

If p0530 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3). The maximum speed of the bearing is factored into the limit for the maximum speed p1082.

Note: For a motor with DRIVE-CLiQ, p0530 can only be set to 1.

p0531[0...n]	**Bearing code number selection / Bearing codeNo sel**		
VECTOR_G	**Can be changed:** C2(3)	**Calculated:** -	**Access level:** 1
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Display and setting the code number of the bearing.

When setting p0301 and p0530 the code number is automatically preassigned and is write protected. The information in p0530 should be observed when removing write protection.

Dependency: Refer to: p0301, p0530, p0532, p1082

Notice: If p0531 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3). The maximum speed of the bearing is factored into the limit for the maximum speed p1082.

Note: p0531 cannot be changed on a motor with DRIVE-CLiQ.

p0532[0...n]	**Bearing maximum speed / Bearing n_max**		
VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]

Description: Sets the maximum speed of the bearing.

The following applies when calculating the maximum speed (p1082):

- for p0324 = 0 or p0532 = 0, p0322 is used.

- for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.

Dependency: Refer to: p0301, p0322, p0324, p0530, p1082

Notice: This parameter is pre-assigned in the case of motors from the motor list (p0301) if a bearing version (p0530) is selected.

When selecting a catalog motor, this parameter cannot be changed (write protection). The information in p0530 should be observed when removing write protection.

If p0532 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).

r0565[0...15] CO: Probe time stamp / Probe t_stamp

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the time stamp MT_ZS_1 up to MT_ZS_16.

Displays the measuring time for an edge at the digital input for the "central measuring probe evaluation stage 3" function.

The measuring time is specified as 16-bit value with a resolution of 0.25 µs.

Priority:

MT1 ... MT8, oldest ... newest time stamp

r0566[0...3] CO: Probe time stamp reference / Probe t_stamp name

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the time stamp reference MT_ZSB1 up to MT_ZSB4.

r0567 CO: Probe diagnostics word / Probe diag_word

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for diagnostics word MT_DIAG.

p0570 Inhibit list values effective number / Inhib list no

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	50	0

Description: Sets the number of parameters in the inhibit list p0571.

This number of parameters can be automatically excluded from the calculation of the motor and control parameters (see p0340, p0578), starting from index 0.

Note: Defines the number of entries in p0571 that should be taken into account.

The inhibit list is deactivated for a value of 0.

p0571[0...49] Inhibit list motor/closed-loop control parameter calculation / Inhib list calc

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2142	0

Description: The inhibit list contains parameters that should be withdrawn from the automatic motor and closed-loop control parameter calculation (p0340, p0578).

Value:
0: No parameter
600: Motor temperature sensor
640: Current limit
1082: Maximum speed
1460: Speed controller P gain
1462: Speed controller integral time
1470: Speed controller P gain encoderless
1472: Speed controller integral time encoderless
1520: Torque limit upper/motoring
1521: Torque limit lower/regenerative
1530: Power limit motoring
1531: Power limit regenerative
1590: Flux controller P gain
1592: Flux controller integral time
2141: Speed threshold 1
2142: Hysteresis speed 1

Note: p0570 defines the number of entries (starting at index 0) for which the inhibit should apply. p0572 can be used to define for which drive data sets the inhibit list should apply.

If a motor data set is entered into a parameter number, then this is not overwritten as soon as only one drive data set refers to the motor data set (p0186).

p0572[0...n] Activate/de-activate inhibit list / Inh_list act/deact

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting for activating/de-activating the inhibit list.

Depending on the setting, the parameters of the inhibit list (p0571) should be overwritten when calculating the motor and closed-loop control parameters for the particular drive data set (DDS).

Value:
0: No
1: Yes

Note: If value = 0:

The automatic calculation (p0340, p0578) also overwrites the parameters of the inhibit list (p0571).

If value = 1:

The automatic calculation (p0340, p0578) does not overwrite the parameters of the inhibit list (p0571).

p0573 Inhibit automatic reference value calculation / Inhibit calc

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to inhibit the calculation of reference parameters (e.g. p2000) when automatically calculating the motor and closed-loop control parameters (p0340, p3900).

Value:	0: No 1: Yes
Notice:	The inhibit for the reference value calculation is canceled when new motor parameters (e.g. p0305) are entered and only one drive data set exists (p0180 = 1). This is the case during initial commissioning. Once the motor and control parameters have been calculated (p0340, p3900), the inhibit for the reference value calculation is automatically re-activated.
Note:	If value = 0: The automatic calculation (p0340, p3900) overwrites the reference parameters. If value = 1: The automatic calculation (p0340, p3900) does not overwrite the reference parameters.

p0578[0...n] Calculate technology-dependent parameters / Calc tec par

VECTOR_G

Can be changed: C2(5), T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description:	This parameter is used to calculate all parameters that depend on the technology of the application (p0500). All of the parameters are calculated that can also be determined using p0340 = 5.
Value:	0: No calculation 1: Complete calculation
Note:	At the end of the calculations, p0578 is automatically set to 0.

p0595 Technological unit selection / Tech unit select

VECTOR_G (Tech_ctrl)

Can be changed: C2(5)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Applications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	32	1

Description: Selects the units for the parameters of the technology controller.
For p0595 = 1, 2, the reference quantity set in p0596 is not active.

Value:

1: %
2: 1 referred no dimensions
3: bar
4: °C
5: Pa
6: ltr/s
7: m³/s
8: ltr/min
9: m³/min
10: ltr/h
11: m³/h
12: kg/s
13: kg/min
14: kg/h
15: t/min
16: t/h
17: N
18: kN
19: Nm
20: psi
21: °F
22: gallon/s
23: inch³/s
24: gallon/min
25: inch³/min
26: gallon/h

27: inch³/h
28: lb/s
29: lb/min
30: lb/h
31: lbf
32: lbf ft

Dependency: Only the unit of the technology controller parameters are switched over (unit group 9_1).

Refer to: p0596

Note: When switching over from % into another unit, the following sequence applies:

- set p0596
- set p0595 to the required unit

p0596 Technological unit reference quantity / Tech unit ref qty

VECTOR_G (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01	340.28235E36	1.00

Description: Sets the reference quantity for the technological units.

When changing over using changeover parameter p0595 to absolute units, all of the parameters involved refer to the reference quantity.

Dependency: Refer to: p0595

Notice: When changing over from one technological unit into another, or when changing the reference parameter, a changeover is not made.

p0600[0...n] Motor temperature sensor for monitoring / Mot temp_sensor

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** 8016
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	21	0

Description: Sets the sensor to monitor the motor temperature.

The sensor type used is set in p0601.

Value:
0: No sensor
1: Temperature sensor via encoder 1
2: Temperature sensor via encoder 2
3: Temperature sensor via encoder 3
10: Temperature sensor via a BICO interconnection
11: Temperature sensor via Motor Module / CU terminals
20: Temperature sensor via a BICO interconnection p0608
21: Temperature sensor via a BICO interconnection p0609

Dependency: Refer to: r0458, p0601, p0603

Caution: ⚠ If, for a selected temperature sensor (p0600 > 0), the motor temperature sensor is not connected but another sensor, then the temperature adaptation of the motor resistances must be switched out. Otherwise, in controlled-loop operation, torque errors will occur that will mean that the drive will not be able to be stopped.

Notice: The parameter is calculated in the drive using p0340 and is inhibited for p0340 > 0.

For operation with a braking resistor (p1300 = 15), p0600 = 11 is automatically set when commissioning.

Note: Re p0600 = 0:

With induction motors, the motor temperature is calculated using the motor temperature model (see also p0612.1).

Re p0600 = 1, 2, 3:

Bimetallic switch (p0601 = 4) and PT100 temperature sensor (p0601 = 5) are not supported.

Re p0600 = 10:

The BICO interconnection should be executed via connector input p0603.

Re p0600 = 11:

For SINAMICS S120 AC Drive (AC/AC) and using the Control Unit Adapter CUA31, the temperature sensor is connected at the adapter (X210).

Re p0600 = 20, 21:

The BICO interconnection should be executed via connector input p0608 or p0609.

Associated parameters: p0601, p4600 ... p4603, p4610 ... p4613

p0601 Temperature sensor, sensor type / Temp_sens type

B_INF	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	4	0

Description: Sets the sensor type for the temperature measurement at input X21 (booksize) or X41 (chassis).

The measured value is displayed in r0035.

Value:
0: No sensor
1: PTC alarm & timer
2: KTY84
4: Bimetallic NC contact alarm & timer

Dependency: Refer to: r0035

Note: The measured value display depends on the selected sensor type.

Re p0601 = 0:

--> r0035 = -200 °C

Re p0601 = 1:

Tripping resistance = 1650 Ohm (lower resistance --> r0035 = -50 °C, higher resistance --> r0035 = 250 °C).

Re p0601 = 2:

Displays the temperature in °C.

Re p0601 = 4:

r0035 = -50 °C

--> The tripping resistance is less than 100 Ohm (bimetallic NC contact is closed or has a short-circuit).

r0035 = 250 °C

--> The tripping resistance is greater than 100 Ohm (bimetallic NC contact is open, not connected or has a wire breakage).

When using the following components, a value of 4 is set as the factory setting and can no longer be changed:

- Basic Line Module (BLM) with internal Braking Module.

- Active Line Module (ALM) with line filter Active Interface Module (AIM, p0220[0] = 41 ... 45).

In these cases, in addition to the temperature display, the temperature is also monitored.

p0601[0...n] Motor temperature sensor type / Mot_temp_sens type

VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** 8016
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	11	2

Description: Sets the sensor type for the motor temperature monitoring.

Value:
0: No sensor
1: PTC alarm & timer
2: KTY84
3: KTY84 and PTC (only for motors with DRIVE-CLiQ):
4: Bimetallic NC contact alarm & timer (only for temp_eval via MM)
5: PT100
10: Evaluation via several temperature channels SME12x
11: Evaluation via several temperature channels BICO

Dependency: A thermal motor model is calculated corresponding to p0612.

Refer to: r0458, p0600, p0612

Note: The temperature sensor for the temperature evaluation is set in p0600.

For p0600 = 10 (temperature sensor via a BICO interconnection), the setting in p0601 has no significance.

Information on using temperature sensors is provided in the following literature:

- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

Re p0601 = 1:

Tripping resistance = 1650 Ohm.

After the tripping resistance has been exceeded, an appropriate alarm is output and after the delay time set in p0606 has expired, an appropriate fault is output.

Re p0601 = 3:

For motors with DRIVE-CLiQ and 2 temperature sensors, the value is automatically set.

Re p0601 = 4:

Tripping resistance = 100 Ohm.

After tripping, an appropriate alarm is output and after the delay time set in p0606 has expired, an appropriate fault is output.

Re p0601 = 5:

It is only possible to evaluate a PT100 for p0600 = 11 and r0192.15 = 1.

Re p0601 = 10:

Not permitted for p0600 = 0, 10, 11.

Associated parameters: p4600 ... p4603 (can be switched via EDS)

For r0458.8 = 1, a temperature evaluation is supported through several temperature channels.

Examples:

When evaluating using SME120 or SME125, 4 temperature channels are available (parameterized using p4600, p4601, p4602, p4603).

When evaluating using CU310 and CUA32, 2 temperature channels are available (encoder interface: parameterization via p4600, terminal block: parameterization via p4601).

Re p0601 = 11:

Not permitted for p0600 = 0, 10, 11.

Associated parameters: p4610 ... p4613 (can be switched via MDS)

p0602 Par_circuit power unit number, temperature sensor / PU_no temp_sensor

VECTOR_G (Parallel)	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	10	0

Description: Sets the power unit number to which the temperature sensor is connected. The value corresponds to the Power unit Data Set number (PDS) of the power unit. The number of power unit data sets is defined in p0120.

p0603 CI: Motor temperature signal source / Mot temp S_src

VECTOR_G	**Can be changed:** C2(3), T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8016
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source to evaluate the motor temperature via a BICO interconnection.

Dependency: Refer to: p0600

Note: Temperature sensor KTY: Valid temperature range -48 °C ... 248 °C.

PTC temperature sensor:

For a value = -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC.

For a value = 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC.

Note:

When using a Terminal Module 31 (TM31), the following applies:

- the sensor type used is set using p4100.
- the temperature signal is interconnected using CO: r4105.

p0604[0...n] Mot_temp_mod 2/KTY alarm threshold / Mod 2/KTY A thresh

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8016
P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [°C]	200.0 [°C]	130.0 [°C]

Description: Sets the alarm threshold for monitoring the motor temperature for motor temperature model 2 or KTY.

After the alarm threshold is exceeded, alarm A07910 is output and timer (p0606) is started.

If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output.

Dependency: Refer to: p0606, p0612

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The hysteresis is 2 K.

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0605[0...n] Mot_temp_mod 1/2 threshold / Mod 1/2 threshold

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8016, 8017
P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [°C]	200.0 [°C]	145.0 [°C]

Description: Sets the threshold for monitoring the motor temperature for motor temperature model 1/2 or KTY.

Motor temperature model 1 (p0612.0 = 1): alarm threshold

- Alarm A07012 is output after the alarm threshold is exceeded.

Motor temperature model 2 (p0612.1 = 1) or KTY: fault threshold

- Fault F07011 is output after the fault threshold is exceeded.

Dependency: Refer to: p0606, p0611, p0612

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Motor temperature model 1:

p0605 also defines the target temperature of the model for r0034 = 100 %. Therefore, p0605 has no influence on the time up to alarm A07012 being issued. The time is only determined by time constant p0611, the actual current and the reference value p0318. For p0318 = 0, the rated motor current is used as reference value.

Note: The hysteresis is 2 K.

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0606[0...n] Mot_temp_mod 2/KTY timer / Mod 2/KTY t_timer

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8016
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	600.000 [s]	0.000 [s]

Description: Sets the timer for monitoring the motor temperature for motor temperature model 2 or KTY.

This timer is started when the temperature alarm threshold (p0604) is exceeded.

If the timer has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output.

If the temperature fault threshold (p0605) is prematurely exceeded before the timer has expired, then fault F07011 is immediately output.

Dependency: Refer to: p0604, p0605

Note: With p0606 = 0 s, the timer is de-activated and only the fault threshold is effective.

KTY sensor: When setting the minimum value, the timer is disabled and a fault is not output until p0605 is exceeded.

PTC sensor, bimetallic NC contact: The timer minimum value has no special significance.

p0607[0...n] Temperature sensor fault timer / Sensor fault time

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8016
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	600.000 [s]	0.100 [s]

Description: Sets the timer between the output of alarm and fault for a temperature sensor fault.

If there is a sensor fault, this timer is started.

If the sensor fault is still present after the timer has expired, a corresponding fault is output.

Notice: The parameterized time is internally rounded-off to an integer multiple of 48 ms.

Note: If the motor is an induction motor, the timer is switched off when setting the minimum value and no alarm is output. Temperature monitoring is then based on the thermal model.

p0608[0...3] CI: Motor temperature signal source 2 / Mot_temp S_src 2

VECTOR_G

Can be changed: C2(3), T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8016
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets signal source 2 to evaluate the motor temperature via a BICO interconnection.

Index:
[0] = Motor temperature channel 1
[1] = Motor temperature channel 2
[2] = Motor temperature channel 3
[3] = Motor temperature channel 4

Dependency: Refer to: p0600

Note: Temperature sensor KTY:

Valid temperature range -48 °C ... 248 °C.

Temperature sensor PTC/bimetal:

For a value of -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC (bimetal contact closed).

For a value of 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC (bimetal contact open).

Note:

When using a Terminal Module 120 (TM120), the following applies:

- the sensor type used is set using p4100.
- the temperature signal is interconnected using connector output r4105.

p0609[0...3]	CI: Motor temperature signal source 3 / Mot_temp S_src 3		
VECTOR_G	**Can be changed:** C2(3), T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8016
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets signal source 3 to evaluate the motor temperature via a BICO interconnection.

Index:
[0] = Motor temperature channel 1
[1] = Motor temperature channel 2
[2] = Motor temperature channel 3
[3] = Motor temperature channel 4

Dependency: Refer to: p0600

Note: Temperature sensor KTY:

Valid temperature range -48 °C ... 248 °C.

Temperature sensor PTC/bimetal:

For a value of -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC (bimetal contact closed).

For a value of 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC (bimetal contact open).

Note:

When using a Terminal Module 120 (TM120), the following applies:

- the sensor type used is set using p4100.
- the temperature signal is interconnected using connector output r4105.

p0610[0...n]	Motor overtemperature response / Mot temp response		
VECTOR_G	**Can be changed:** C2(3), T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** 8016, 8017
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	12	12

Description: Sets the system response when the motor temperature reaches the alarm threshold.

Value:
0: No response only alarm no reduction of I_max
1: Messages, reduction of I_max
2: Messages, no reduction of I_max
12: Messages, no reduction of I_max, temperature storage

Dependency: Refer to: p0601, p0604, p0605, p0614, p0615

Note: The I_max reduction is not executed for PTC (p0601 = 1) or bimetallic NC contact (p0601 = 4).

The I_max reduction results in a lower output frequency.

If value = 0:

An alarm is output and I_max is not reduced.

If value = 1:

An alarm is output and a timer is started. A fault is output if the alarm is still active after this timer has expired.

- for KTY84, the following applies: I_max. is reduced
- for PTC, the following is valid: I_max. is not reduced

If value = 2:

An alarm is output and a timer is started. A fault is output if the alarm is still active after this timer has expired.

If value = 12:

Behavior is always the same as for value 2.

For motor temperature monitoring without temperature sensor, when switching off, the model temperature is saved in a non-volatile fashion. When switching on, the same value (reduced by p0614) is taken into account in the model calculation. As a consequence, the UL508C specification is fulfilled.

p0611[0...n] I2t motor model thermal time constant / I2t mot_mod T

VECTOR_G

Can be changed: C2(1, 3), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [s]	20000 [s]	0 [s]

Description: Sets the winding time constant.

The time constant specifies the warm-up time of the cold stator winding when loaded with the motor standstill current (rated motor current, if the motor standstill current is not parameterized) up until a temperature rise of 63 % of the continuously permissible winding temperature has been reached.

Dependency: This parameter is only used for synchronous motors (p0300 = 2xx, 4).

Refer to: r0034, p0612, p0615

Notice: This parameter is automatically pre-set from the motor database for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

When exiting commissioning, p0612 is checked, and where relevant, is preassigned to a value that matches the motor power, if a temperature sensor was not parameterized (see p0601).

Note: When parameter p0611 is reset to 0, then this switches out the thermal I2t motor model (refer to p0612).

If no temperature sensor is parameterized, then the ambient temperature for the thermal motor model is referred to p0625.

p0612[0...n] Mot_temp_mod activation / Mot_temp_mod act

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0010 0000 0010 bin

Description: Setting to activate the motor temperature model.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activating motor temperature model 1 (I2t)	Yes	No	-
01	Activate motor temperature model 2	Yes	No	-
02	Activate motor temperature model 3	Yes	No	-
09	Activate motor temperature model 2 expansions	Yes	No	-

Dependency: For synchronous motors, when exiting commissioning, temperature model 1 is automatically activated if a time constant has been entered in p0611.

Refer to: r0034, p0604, p0605, p0606, p0611, p0615, p0625, p0626, p0627, p0628

Note: Mot_temp_mod: motor temperature model

Re bit 00:

This bit is used to activate/deactivate the motor temperature model for permanent-magnet synchronous motors.

Re bit 01:

This bit is used to activate/deactivate the motor temperature model for induction motors.

Re bit 02:

This bit is used to activate/deactivate the motor temperature model for 1FK7 motors without encoder.

Motor temperature model 3 cannot be simultaneously activated with another motor temperature model.

p0614[0...n] Thermal resistance adaptation reduction factor / Therm R_adapt red

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [%]	100 [%]	30 [%]

Description: Sets the reduction factor for the overtemperature of the thermal adaptation of the stator/rotor resistance.

The value is a starting value when switching on. Internally, after switch-on, the reduction factor has no effect corresponding to the thermal time constant.

Dependency: Refer to: p0610

Note: The reduction factor is only effective for p0610 = 12, and refers to the overtemperature.

p0615[0...n] Mot_temp_mod 1 (I2t) fault threshold / I2t F thresh

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [°C]	220.0 [°C]	180.0 [°C]

Description: Sets the fault threshold for monitoring the motor temperature for motor temperature model 1 (I2t).

- Fault F07011 is output after the fault threshold is exceeded.
- fault threshold for r0034 = 100 % * (p0615 - 40) / (p0605 - 40).

Dependency: The parameter is only used for permanent-magnet synchronous motors (p0300 = 2xx).

Refer to: r0034, p0611, p0612

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The hysteresis is 2 K.

p0616[0...n] Motor overtemperature alarm threshold 1 / Mot temp alarm 1

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8016
P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [°C]	200.0 [°C]	130.0 [°C]

Description: Sets the alarm threshold 1 for monitoring the motor temperature.

Note: The alarm threshold is not, as for p0604, coupled to the timer p0606. The hysteresis for canceling the fault is 2 K.

p0620[0...n] Thermal adaptation, stator and rotor resistance / Mot therm_adapt R

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	1

Description: Sets the thermal adaptation of the stator/primary section resistance and rotor/secondary section resistance according to r0395 and r0396.

Value:
0: No thermal adaptation of stator and rotor resistances
1: Resistances adapted to the temperatures of the thermal model
2: Resistances adapted to the measured stator winding temperature

Note: For p0620 = 1, the following applies:

The stator resistance is adapted using the temperature in r0035 and the rotor resistance together with the model temperature in r0633.

For p0620 = 2, the following applies:

The stator resistance is adapted using the temperature in r0035. If applicable, the rotor temperature for adapting the rotor resistance is calculated from the stator temperature (r0035) as follows:

theta_R = (r0628 + r0625) / (r0627 + r0625) * r0035

For separately-excited synchronous motors and p0620 = 1, p0620 = 2 is internally and automatically used for calculating. There is no thermal model to adapt the damping resistances.

p0621[0...n] Identification stator resistance after restart / Rst_ident Restart

VECTOR_G (n/M)

Can be changed: C2(3), T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Selects the identification of the stator resistance after booting the Control Unit (only for vector control).

The identification is used to measure the actual stator resistance and from the ratio of the result of motor data identification (p0350) to the matching ambient temperature (p0625) the actual mean temperature of the stator winding is calculated. The result is used to initialize the thermal motor model.

p0621 = 1:

Identification of the stator resistance only when the drive is powered up for the first time (pulse enable) after booting the Control Unit.

p0621 = 2:

Identification of the stator resistance every time the drive is powered up (pulse enable).

Value:
0: No Rs identification
1: Rs identification after switching-on again
2: Rs identification after switching-on each time

Dependency: - perform motor data identification (see p1910) with cold motor.

- enter ambient temperature at time of motor data identification in p0625.

Refer to: p0622, r0623

Notice: The calculated stator temperature can only be compared with the measured value of a temperature sensor (KTY) to a certain extent, as the sensor is usually the warmest point of the stator winding, whereas the measured value of identification reflects the mean value of the stator winding.

Furthermore this is a short-time measurement with limited accuracy that is performed during the magnetizing phase of the induction motor.

Note: The measurement is carried out:

- For induction motors
- When vector control is active (see p1300)
- If a temperature sensor (KTY) has not been connected
- When the motor is at a standstill when switched on

When a flying restart is performed on a rotating motor, the temperatures of the thermal motor model are set to a third of the overtemperatures. This occurs only once, however, when the CU is booted (e.g. after a power failure).

If identification is activated, the magnetizing time is determined via p0622 and not via p0346. Quick magnetizing (p1401.6) is de-energized internally and alarm A07416 is displayed. The speed is enabled after completion of the measurement.

p0622[0...n] Motor excitation time for Rs_ident after powering up again / t_excit Rs_id

VECTOR_G (n/M)

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	20.000 [s]	0.000 [s]

Description: Sets the excitation time of the motor for the stator resistance identification after powering up again (restart).

Dependency: Refer to: p0621, r0623

Note: For p0622 < p0346 the following applies:

If identification is activated, the magnetizing time is influenced by p0622. The speed is enabled after measurement is complete, but not before the time in p0346 has elapsed (see r0056 bit 4). The time taken for measurement also depends on the settling time of the measured current.

For p0622 >= p0346 the following applies:

Parameter p0622 is internally limited to the magnetizing time p0346, so that p0346 represents the maximum possible magnetizing time during identification. The entire measurement period (magnetizing plus measurement settling time plus measuring time) will always be greater than p0346.

r0623 Rs identification stator resistance after switch on again / Rs-id Rs aft sw-on

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the stator resistance determined using the Rs identification after switching on again.

Dependency: Refer to: p0621, p0622

p0624[0...n] Motor temperature offset PT100 / Mot T_offset PT100

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8016
P-Group: Motor	**Units group:** 21_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-100.0 [K]	100.0 [K]	0.0 [K]

Description: Sets the temperature offset for the PT100 measured value.

If there is a difference between the motor temperature displayed in r0035 and the actual motor temperature, this offset can be entered in this parameter, thereby compensating for the difference.

Dependency: Refer to: p0600, p0601, p0602

Note: The parameter only takes effect with the following settings:

- Temperature sensor of the power unit detected (p0600 = 11).
- Sensor type PT100 selected (p0601 = 5).

If the resistance in series with the PT100 (e.g. the cable resistance of the feeder cable) is known, the following conversion formula must be used:

Offset in p0624 = Measured resistance in ohms x 2.5 K/Ohm

Example:

Measured cable resistance = 2 Ohm

--> 2 Ohm x 2.5 K / Ohm = 5.0 K

p0625[0...n] Motor ambient temperature during commissioning / Mot T_ambient

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-40 [°C]	80 [°C]	20 [°C]

Description: Defines the ambient temperature of the motor for calculating the motor temperature model.

Dependency: Refer to: p0350, p0354

Note: The parameters for stator and rotor resistance (p0350, p0354) refer to this temperature.

If the thermal I2t motor model is activated for permanent-magnet synchronous motors (refer to p0611), p0625 is included in the model calculation if a temperature sensor is not being used (see p0601).

p0626[0...n]	Motor overtemperature, stator core / Mot T_over core		
VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
	P-Group: Motor	**Units group:** 21_2	**Unit selection:** p0505
	Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	10 [K]	200 [K]	50 [K]

Description: Defines the rated overtemperature of the stator core referred to the ambient temperature.

Dependency: For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311.

Refer to: p0625

Notice: When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically preassigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0627[0...n]	Motor overtemperature, stator winding / Mot T_over stator		
VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
	P-Group: Motor	**Units group:** 21_2	**Unit selection:** p0505
	Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	15 [K]	200 [K]	80 [K]

Description: Defines the rated overtemperature of the stator winding referred to the ambient temperature.

Dependency: For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311.

Refer to: p0625

Notice: When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically preassigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0628[0...n]	Motor overtemperature rotor winding / Mot T_over rotor		
VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
	P-Group: Motor	**Units group:** 21_2	**Unit selection:** p0505
	Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	20 [K]	200 [K]	100 [K]

Description: Defines the rated overtemperature of the squirrel cage rotor referred to ambient temperature.

Dependency: For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311.

Refer to: p0625

Notice: When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically preassigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0629[0...n]	**Stator resistance reference / R_stator ref**		
VECTOR_G (n/M)	**Can be changed:** C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** 16_1	**Unit selection:** p0349
	Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00000 [ohm]	2000.00000 [ohm]	0.00000 [ohm]

Description: Reference value for the identification of the stator resistance every time the drive is powered up.

Dependency: The measurement of the reference value is activated by the automatic calculation (p0340 = 1, 2), if the following conditions apply:

- the motor temperature is at this instant in time less than 30 °C (r0035).

- a KTY temperature sensor is not being used (p0601).

Refer to: p0621, r0623

Note: The reference value to identify the stator resistance should be manually entered after the first identification (p0629 = r0623). The identification must be realized when the motor is in a cold state, as the value refers to the ambient temperature p0625. The feeder cable resistance should be entered into p0352 before the measurement.

The result must be saved after the first measurement so that the reference is available after the CU has a powered up. When changing p0350 or p0352, the reference value p0629 should be re-determined.

r0630[0...n]	**Mot_temp_mod ambient temperature / Mod T_ambient**		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
	P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: REL, FEM	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°C]	- [°C]	- [°C]

Description: Displays the ambient temperature of the motor temperature model (models 2 and 3).

r0631[0...n]	**Mot_temp_mod stator iron temperature / Mod T_stator**		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
	P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: REL, FEM	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°C]	- [°C]	- [°C]

Description: Displays the stator iron temperature of the motor temperature model (models 2 and 3).

r0632[0...n]	**Mot_temp_mod stator winding temperature / Mod T_winding**		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
	P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: REL, FEM	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°C]	- [°C]	- [°C]

Description: Displays the stator winding temperature of the motor temperature model (models 2 and 3).

r0633[0...n] Mot_temp_mod rotor temperature / Mod rotor temp

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
	P-Group: Motor	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: REL, FEM	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°C]	- [°C]	- [°C]

Description: Displays the rotor temperature of the motor temperature model (model 2).

Note: For motor temperature model 3 (p0612.2 = 1), this parameter is not valid:

p0634[0...n] Q flux flux constant unsaturated / PSIQ KPSI UNSAT

VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [Vsrms]	100.000 [Vsrms]	0.000 [Vsrms]

Description: The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients.
The parameter weights the unsaturated component of the quadrature axis flux function.

p0635[0...n] Q flux quadrature axis current constant unsaturated / PSIQ KIQ UNSAT

VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients.
This parameter describes the interdependency of the unsaturated component of the quadrature axis current.

Dependency: Refer to: p0634

p0636[0...n] Q flux direct axis current constant unsaturated / PSIQ KID UNSAT

VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients.
This parameter describes the interdependency of the unsaturated component of the direct axis current.

Dependency: Refer to: p0634

p0637[0...n] Q flux flux gradient saturated / PSIQ Grad SAT

VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [mH]	10000.00 [mH]	0.00 [mH]

Description: The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients.
This parameter describes the gradients of the saturated component over the quadrature axis current.

Dependency: Refer to: p0634, p0635, p0636

p0640[0...n] Current limit / Current limit

VECTOR_G

Can be changed: C2(1, 3), U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5722, 6640
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the current limit.

Dependency: Refer to: r0209, p0323

Note: The parameter is part of the quick commissioning (p0010 = 1); this means that it is appropriately pre-assigned when changing p0305, p0323 and p0338.

The current limit p0640 is limited to r0209 and p0323. The limit to p0323 is not realized if a value of zero is entered there.

The resulting current limit is displayed in r0067 and if required, r0067 is reduced by the thermal model of the Motor Module.

The torque and power limits (p1520, p1521, p1530, p1531) matching the current limit are automatically calculated when exiting the quick commissioning using p3900 > 0 or using the automatic parameterization with p0340 = 3, 5.

For VECTOR the following applies (p0107):

p0640 is limited to 4.0 x p0305.

p0640 is pre-assigned for the automatic self commissioning routine (e.g. to 1.5 x p0305, with p0305 = r0207[1]).

p0640 must be entered when commissioning the system. This is the reason that p0640 is not calculated by the automatic parameterization when exiting the quick commissioning (p3900 > 0).

For SERVO the following applies (p0107):

p0640 is pre-assigned as follows using the automatic parameterization (p0340 = 1, p3900 > 0) taking into account the limits r0209 and r0323:

- for induction motors: p0640 = 1.5 x p0305
- for synchronous motors: p0640 = p0338

p0641[0...n] CI: Current limit variable / Curr lim var

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6640
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the variable current limit.

The value is referred to p0640.

p0643[0...n] Overvoltage protection for synchronous motors / Overvolt_protect

VECTOR_G (n/M)

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the overvoltage protection for synchronous motors in the field-weakening range.

Value:
0: No measure
1: Voltage Protection Module (VPM)

Dependency: Refer to: p0316, p1082, p1231, p9601, p9801

Notice: When the speed limiting is removed, the user is responsible for implementing a suitable overvoltage protection.

Note: In the field-weakening range, synchronous motors can, when a fault condition exists, generate high DC link voltages. The following possibilities exist to protect the drive system from being destroyed due to overvoltage:

- limit the maximum speed (p1082) without any additional protection.

The maximum speed without protection is calculated as follows:

Rotary motors: p1082 [rpm] <= 11.695 * r0297/p0316 [Nm/A]

Linear motors: p1082 [m/min] <= 73.484 *r0297/0316 [N/A]

- use a Voltage Protection Module (VPM) in conjunction with the function "Safe Torque Off" (p9601, p9801).

When a fault condition exists, the VPM short-circuits the motors. During the short-circuit, the pulses must be suppressed - this means that the terminals for the function "Safe Torque Off" must be connected to the VPM.

- activating the internal voltage protection (IVP) with p1231 = 3.

p0644[0...n] Current limit excitation induction motor / Imax excitat ASM

VECTOR_G (n/M)

Can be changed: C2, U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
50.0 [%]	300.0 [%]	300.0 [%]

Description: Maximum excitation current of the induction motor referred to the permissible rated current of the power unit (r0207[0]).

Dependency: Only effective for vector control.

Refer to: p1401, p1573

Note: The parameter is preassigned in the automatic calculation for chassis power units.

p0650[0...n] Actual motor operating hours / Mot t_oper act

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [h]	4294967295 [h]	0 [h]

Description: Displays the operating hours for the corresponding motor.

The motor operating time counter continues to run when the pulses are enabled. When the pulse enable is withdrawn, the counter is held and the value saved.

Dependency: The following prerequisites must be fulfilled in order to be able to save the operating hours counter in a non-volatile fashion:

- firmware with V2.2 or higher.
- Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).

Refer to: p0651

Note: The operating hours counter in p0650 can only be reset to 0.

The operating hours counter only runs with motor data set 0 and 1 (MDS).

p0651[0...n] Motor operating hours maintenance interval / Mot t_op maint

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [h]	150000 [h]	0 [h]

Description: Sets the service/maintenance intervals in hours for the appropriate motor.

An appropriate fault is output when the operating hours set here are reached.

Dependency: Refer to: p0650

Note: For p0651 = 0, the operating hours counter is disabled.
When setting p0651 to 0, then p0650 is automatically set to 0.
The operating hours counter only runs with motor data set 0 and 1 (MDS).

p0652[0...n] Motor stator resistance scaling / Mot R_stator scal

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.0 [%]	300.0 [%]	100.0 [%]

Description: Sets the factor to evaluate the stator resistance.

Dependency: Refer to: p0350, r0370

p0653[0...n] Motor stator leakage inductance scaling / Mot L_S_leak scal

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4

Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.0 [%]	300.0 [%]	100.0 [%]

Description: Factor to evaluate the damping resistance quadrature to the rotor axis (q axis).

Dependency: Refer to: p0355, r0375

p0680[0...7] Central measuring probe input terminal / Cen meas inp

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	8	0

Description: Sets the digital input used for the function "central measuring probe evaluation".

p0680[0]: Digital input, measuring probe 1

p0680[1]: Digital input, measuring probe 2

...

p0680[7]: Digital input, measuring probe 8

Value:
0: No meas probe
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Dependency: Refer to: p0728

Notice: To the terminal designation:

The first designation is valid for CU320, the second for CU310.

To select the values:

For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output

Prerequisite: The DI/DO must be set as input (p0728.x = 0).

If a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0488, p0489, p0493, p0494, p0495, p0580, p2517 or p2518.

p0681 BI: Central measuring probe synchronizing signal signal source / Cen meas sync_sig

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the synchronizing signal (SYN) of the function "central measuring probe evaluation".

The signal is used to synchronize the common system time between the master and slave.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0682 CI: Central measuring probe control word signal source / Cen meas STW S_src

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: T	**Calculated:** -	**Access level:** 3

P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	16	0

Description: Sets the evaluation technique for the "central measuring probe evaluation" function.

Value:
0: Measurement with handshake
1: Measurement without handshake 2 edges
16: Measurement without handshake more than 2 edges

Notice: Re p0684 = 16:

This evaluation procedure is only activated after parameter save and POWER ON.

Note: During measurement without a handshake, the probe may have a higher evaluation frequency.

The setting "Measurement without handshake" must be supported by the higher-level control. This setting cannot be used for SIMOTION D with integrated SINAMICS or with CX32.

Re p0684 = 0:

Changing this evaluation procedure to p0684 = 1 is possible in the RUN state.

Changing this evaluation procedure to p0684 = 16 is only activated after parameter save and POWER ON.

Permissible combinations in p0922 are:

p0922 = 391, 392, 393, 394

Re p0684 = 1:

Changing this evaluation procedure to p0684 = 0 is possible in the RUN state.

Changing this evaluation procedure to p0684 = 16 is only activated after parameter save and POWER ON.

Permissible combinations in p0922 are:
p0922 = 391, 392, 393, 394
Re p0684 = 16:
Changing this evaluation procedure to p0684 = 0 or to p0684 = 1 is only activated after parameter save and POWER ON.
Permissible combinations in p0922 are:
p0922 = 395

Description: Runs the corresponding macro files.

The binector inputs of the corresponding command data set are appropriately interconnected.

The selected macro file must be available on the memory card/device memory.

Example:

p0700 = 6 --> macro file PM000006.ACX is run.

Dependency: Refer to: p0015, p1000, p1500, r8571

Notice: No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!

When executing a specific macro, the corresponding programmed settings are made and become active.

Note: The macros in the specified directory are displayed in r8571. r8571 is not in the expert list of the commissioning software.

Macros available as standard are described in the technical documentation of the particular product.

Description: Sets the signal source for terminal DI/DO 11 (X122.13 / X121.11).
To the terminal designation:
The first designation is valid for CU320, the second for CU310.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Prerequisite: The DI/DO must be set as an output (p0728.11 = 1).
DI/DO: Bidirectional Digital Input/Output

p0742 BI: CU signal source for terminal DI/DO 12 / CU S_src DI/DO 12

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2119, 2132
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for terminal DI/DO 12 (X132.9 / X131.1).
To the terminal designation:
The first designation is valid for CU320, the second for CU310.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Prerequisite: The DI/DO must be set as an output (p0728.12 = 1).
DI/DO: Bidirectional Digital Input/Output

p0743 BI: CU signal source for terminal DI/DO 13 / CU S_src DI/DO 13

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2132
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for terminal DI/DO 13 (X132.10 / X131.2).

To the terminal designation:
The first designation is valid for CU320, the second for CU310.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Prerequisite: The DI/DO must be set as an output (p0728.13 = 1).
DI/DO: Bidirectional Digital Input/Output

p0744 BI: CU signal source for terminal DI/DO 14 / CU S_src DI/DO 14

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2133
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for terminal DI/DO 14 (X132.12 / X131.4).
To the terminal designation:
The first designation is valid for CU320, the second for CU310.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Prerequisite: The DI/DO must be set as an output (p0728.14 = 1).
DI/DO: Bidirectional Digital Input/Output

p0745 BI: CU signal source for terminal DI/DO 15 / CU S_src DI/DO 15

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2119, 2133
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for terminal DI/DO 15 (X132.13 / X131.5you).
To the terminal designation:
The first designation is valid for CU320, the second for CU310.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Prerequisite: The DI/DO must be set as an output (p0728.15 = 1).
DI/DO: Bidirectional Digital Input/Output

r0747 CU digital outputs status / CU DO status

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 2130, 2131, 2132, 2133
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of digital outputs.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
08	DI/DO 8 (X122.9/X121.7)	High	Low	-
09	DI/DO 9 (X122.10/X121.8)	High	Low	-
10	DI/DO 10 (X122.12/X121.10)	High	Low	-
11	DI/DO 11 (X122.13/X121.11)	High	Low	-
12	DI/DO 12 (X132.9/X131.1)	High	Low	-
13	DI/DO 13 (X132.10/X131.2)	High	Low	-
14	DI/DO 14 (X132.12/X131.4)	High	Low	-
15	DI/DO 15 (X132.13/X131.5)	High	Low	-

Notice: To the terminal designation:
The first designation is valid for CU320, the second for CU310.

Note: Inversion using p0748 has been taken into account.
DI/DO: Bidirectional Digital Input/Output

p0748 CU invert digital outputs / CU DO inv

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 2030, 2031, 2130, 2131, 2132, 2133
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 bin

Description: Setting to invert the signals at the digital outputs.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
08	DI/DO 8 (X122.9/X121.7)	Inverted	Not inverted	-
09	DI/DO 9 (X122.10/X121.8)	Inverted	Not inverted	-
10	DI/DO 10 (X122.12/X121.10)	Inverted	Not inverted	-
11	DI/DO 11 (X122.13/X121.11)	Inverted	Not inverted	-
12	DI/DO 12 (X132.9/X131.1)	Inverted	Not inverted	-
13	DI/DO 13 (X132.10/X131.2)	Inverted	Not inverted	-
14	DI/DO 14 (X132.12/X131.4)	Inverted	Not inverted	-
15	DI/DO 15 (X132.13/X131.5)	Inverted	Not inverted	-

Notice: If telegram 39x is set via p0922 in SINAMICS Integrated, the inversion of the output has no effect.
To the terminal designation:
The first designation is valid for CU320, the second for CU310.

Note: DI/DO: Bidirectional Digital Input/Output

p0771[0...2] CI: Test sockets signal source / Test skt S_src

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Integer16	**Dyn. index:** -	**Func. diagram:** 8134
P-Group: Terminals	**Units group:** -	**Unit selection:** -

[2] = T2

Dependency: Refer to: p0771, r0772, p0776, p0777, p0778, p0779, p0780, p0783, p0784, r0786

p0776[0...2] Test socket mode / Test skt mode

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8134
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
96	99	99

Description: Sets the mode for the test sockets.

Value:
96: Physical address (32-bit integer signal unsigned)
97: Physical address (32-bit integer signal)
98: Physical address (32-bit floating-point signal)
99: BICO signal

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Refer to: p0771, r0772, r0774, p0777, p0778, p0779, p0780, p0783, p0784, r0786, p0788, p0789, r0790

p0777[0...2] Test socket characteristic value x1 / Test skt char x1

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8134
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-100000.00 [%]	100000.00 [%]	0.00 [%]

Description: The scaling characteristic for the test sockets is defined using two points.
This parameter specifies the x coordinate (percentage) of the first point on the characteristic.

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Can only be set when p0776 = 99.
Refer to: p0778, p0779, p0780, r0786

Note: The value 0.00 % corresponds to 2.49 V.

p0778[0...2] Test socket characteristic value y1 / Test skt char y1

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8134
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [V]	4.98 [V]	2.49 [V]

Description: The scaling characteristic for the test sockets is defined using two points.
This parameter specifies the y coordinate (output voltage) of the first point on the characteristic.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: Can only be set when p0776 = 99.
Refer to: p0777, p0779, p0780, r0786

p0779[0...2] Test socket characteristic value x2 / Test skt char x2

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8134
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-100000.00 [%]	427.9E9 [%]	100.00 [%]

Description: The scaling characteristic for the test sockets is defined using two points.
This parameter specifies the x coordinate (percentage) of the second point on the characteristic.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: Can only be set when p0776 = 99.
Refer to: p0777, p0778, p0780, r0786

Note: The value 100.00 % corresponds to 4.98 V.

p0780[0...2] Test socket characteristic value y2 / Test skt char y2

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8134
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [V]	4.98 [V]	4.98 [V]

Description: The scaling characteristic for the test sockets is defined using two points.
This parameter specifies the y coordinate (output voltage) of the second point on the characteristic.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: Can only be set when p0776 = 99.
Refer to: p0777, p0778, p0779, r0786

p0783[0...2] Test sockets offset / Test skt offset

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8134
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-4.98 [V]	4.98 [V]	0.00 [V]

Description: Sets an additional offset for the test sockets.

Index:
[0] = T0
[1] = T1
[2] = T2

p0784[0...2] Test socket limit on/off / TestSktLim on/off

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8134
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the limit for a signal to be output via test sockets.

Value:
0: Limiting off
1: Limiting on

Index:
[0] = T0
[1] = T1
[2] = T2

Note: Limiting on:

If signals are output outside the permissible measuring range, the signal is limited to 4.98 V or to 0 V.

Limiting off:

If signals are output outside the permissible measuring range, this causes signal overflow. In the case of signal overflow, the signal jumps from 0 V to 4.98 V or from 4.98 V to 0 V.

r0786[0...2] Test socket scaling per volt / TestSktScale/Volt

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8134
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the scaling of the signal to be output.

A change in the output voltage by 1 volt corresponds to the value in this parameter. The units are determined by the interconnected test signal.

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Refer to: p0771, r0772, r0774, p0777, p0778, p0779, p0780, p0783, p0784

Note: Example:

r0786[0] = 1500.0 and the measuring signal is r0063 (CO: Actual speed smoothed [rpm]).

A change of 1 V at the output of test socket T0 corresponds to 1500.0 [rpm].

p0788[0...2] Test sockets physical address / Test skt PhyAddr

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin

Description: Sets the physical address to output signals via the test sockets.

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Changes only become effective if p0776 does not equal 99.

Refer to: p0789, r0790

p0789[0...2] Test sockets physical address gain / TestSktPhyAddrGain

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-340.28235E36	340.28235E36	1.00000

Description: Sets the gain of a signal output of a physical address via test sockets.

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Changes only become effective if p0776 does not equal 99.

Refer to: p0788

r0790[0...2] Test sockets physical address signal value / TestSktsPhyAddrVal

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual value of a signal determined via a physical address.

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Only effective when p0776 = 97 or p0776 = 96.

Refer to: p0788

p0795 CU digital inputs simulation mode / CU DI simulation

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 2020, 2030, 2031, 2100, 2119, 2120, 2130, 2131, 2132, 2133
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the simulation mode for digital inputs.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI 0 (X122.1/X121.1)	Simulation	Terminal eval	-
01	DI 1 (X122.2/X121.2)	Simulation	Terminal eval	-
02	DI 2 (X122.3/X121.3)	Simulation	Terminal eval	-
03	DI 3 (X122.4/X121.4)	Simulation	Terminal eval	-
04	DI 4 (X132.1 / -)	Simulation	Terminal eval	-
05	DI 5 (X132.2 / -)	Simulation	Terminal eval	-
06	DI 6 (X132.3 / -)	Simulation	Terminal eval	-
07	DI 7 (X132.4 / -)	Simulation	Terminal eval	-
08	DI/DO 8 (X122.9/X121.7)	Simulation	Terminal eval	-
09	DI/DO 9 (X122.10/X121.8)	Simulation	Terminal eval	-
10	DI/DO 10 (X122.12/X121.10)	Simulation	Terminal eval	-
11	DI/DO 11 (X122.13/X121.11)	Simulation	Terminal eval	-
12	DI/DO 12 (X132.9/X131.1)	Simulation	Terminal eval	-
13	DI/DO 13 (X132.10/X131.2)	Simulation	Terminal eval	-
14	DI/DO 14 (X132.12/X131.4)	Simulation	Terminal eval	-
15	DI/DO 15 (X132.13/X131.5)	Simulation	Terminal eval	-
16	DI 16 (X122.5/X120.3)	Simulation	Terminal eval	-
17	DI 17 (X122.6/X120.4)	Simulation	Terminal eval	-
20	DI 20 (X132.5/X120.9)	Simulation	Terminal eval	-
21	DI 21 (X132.6/X120.10)	Simulation	Terminal eval	-

Dependency: The setpoint for the input signals is specified using p0796.

Refer to: p0796, p9620

Notice: If a digital input is used as signal source for the function "STO" (BI: p9620) then it is not permissible to select the simulation mode and this is rejected.

To the terminal designation:

The first designation stands for CU320, the second for CU310.

Note: This parameter is not saved when data is backed-up (p0971, p0977).

DI: Digital Input

DI/DO: Bidirectional Digital Input/Output

p0796 CU digital inputs simulation mode setpoint / CU DI simul setp

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 2020, 2030, 2031, 2100, 2119, 2120, 2130, 2131, 2132, 2133
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the setpoint for the input signals in the digital input simulation mode.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI 0 (X122.1/X121.1)	High	Low	-

21	DI 21 (X132.6/X120.10)	High	Low	-

Dependency: The simulation of a digital input is selected using p0795.

Refer to: p0795

Notice: To the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: This parameter is not saved when data is backed-up (p0971, p0977).

DI: Digital Input

DI/DO: Bidirectional Digital Input/Output

p0799[0...2] CU inputs/outputs sampling time / CU I/O t_sampl

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2020, 2030, 2031
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of the Control Unit.

Index: [0] = Digital inputs/outputs (DI/DO)
[1] = Not available - analog inputs (AI)
[2] = Not available - analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.

Refer to: p0009

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).

p0806 BI: Inhibit master control / PcCtrl inhibit

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to block the master control.

Dependency: Refer to: r0807

Note: The commissioning software (drive control panel) uses the master control, for example.

r0807.0 BO: Master control active / PcCtrl active

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays what has the master control.

The drive can be controlled via the BICO interconnection or from external (e.g. the commissioning software).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Master control active	Yes	No	5030, 6031

Dependency: Refer to: p0806

Notice: The master control only influences control word 1 and speed setpoint 1. Other control words/setpoints can be transferred from another automation device.

Note: Bit 0 = 0: BICO interconnection active
Bit 0 = 1: Master control for PC/AOP
The commissioning software (drive control panel) uses the master control, for example.

p0809[0...2] Copy Command Data Set CDS / Copy CDS

VECTOR_G

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source to select the Drive Data Set, bit 4 (DDS, bit 4).

Dependency: Refer to: r0051, r0837

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0826[0...n]	Motor changeover motor number / Mot_chng mot No.		
VECTOR_G	**Can be changed:** C2(3)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** 8575
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	15	0

Description: Sets the freely-assignable motor number for the motor changeover.

Dependency: Refer to: p0827

Notice: When changing over motor data sets with the same motor number (e.g. star-delta changeover) and for a motor with brake, the motor brake remains open during the changeover.

Note: When the motor data sets are changed over, the following applies:

The same motor number signifies the same thermal model.

For the same motor number, the correction values of the Rs, Lh or kT adaptation are applied for the data set changeover (refer to r1782, r1787, r1797).

p0827[0...n]	Motor changeover status word bit number / Mot_chg ZSW bitNo.		
VECTOR_G	**Can be changed:** C2(3)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** 8575
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	15	0

Description: Sets the bit number for every motor data set.

Example:

p0827[0] = 0: For MDS0, r0830.0 is switched.

p0827[1] = 5: For MDS1, r0830.5 is switched.

Dependency: Refer to: p0826, r0830

Note: A motor is only changed over (a new motor selected) after the pulses have been suppressed.
When the motor data sets are changed over, the following applies:
Bit numbers that are not identical, signify that the motor must be changed over.

p0828[0...n] BI: Motor changeover feedback signal / Mot_chng fdbk sig

VECTOR_G

Can be changed: C2(3), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 8575
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the feedback signal when changing over the motor.
For p0833.0 = 1 the following applies:
This feedback signal (0/1 edge) is required after a motor changeover to enable the pulses.

Dependency: Refer to: p0833

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

r0830.0...15 CO/BO: Motor changeover status word / Mot_chngov ZSW

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8575
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status word of the motor changeover.
These signals can be connected to digital outputs to change over the motor.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Motor selection bit 0	High	Low	-
01	Motor selection bit 1	High	Low	-
02	Motor selection bit 2	High	Low	-

08	Motor selection bit 8	High	Low	-
09	Motor selection bit 9	High	Low	-
10	Motor selection bit 10	High	Low	-
11	Motor selection bit 11	High	Low	-
12	Motor selection bit 12	High	Low	-
13	Motor selection bit 13	High	Low	-
14	Motor selection bit 14	High	Low	-
15	Motor selection bit 15	High	Low	-

Dependency: Refer to: p0827

p0831[0...15] BI: Motor changeover contactor feedback / Mot_chg cont fdbk

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 8575
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the feedback signal of the contactors when changing over motors.
There is a fixed inter-relationship between energizing the contactor and the feedback signal.

Example:

A changeover is to be made between MDS0 (motor 0) and MDS1 (motor 1). The contactors should be switched using bit 4 (contactor 0) and 5 (contactor 1). The changeover should be made with an interconnection of the feedback signal.

Implementation:

MDS0: p0827[0] = 4, interconnect output to switch contactor 0 to r0830.4, p0831[4] = "input, feedback signal, contactor 0"

MDS1: p0827[1] = 5, interconnect output to switch contactor 1 to r0830.5, p0831[5] = "input, feedback signal, contactor 1"

The following sequence applies when changing over from MDS0 to MDS1:

1. The status bit r0830.4 is deleted. When the feedback signal (p0831[4]) is connected, the system waits until the feedback signal "contactor open" is displayed. If the feedback signal is not connected, then the system waits for the switch-off interlocking time of 320 ms.

2. The status bit r0830.5 is set. If the feedback signal (p0831[5]) is connected, the system waits until the feedback signal "contactor closed" is displayed. If the feedback signal is not connected, then the system waits for the switch-on interlocking time of 160 ms.

Index:
[0] = Feedback signal contactor 0
[1] = Feedback signal contactor 1
[2] = Feedback signal contactor 2
[3] = Feedback signal contactor 3
[4] = Feedback signal contactor 4

p0833 Data set changeover configuration / DS_chng config

VECTOR_G			
	Can be changed: C2(15)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8575
	P-Group: Data sets	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0010 bin

Description: Sets the configuration for the motor and encoder changeover.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Contactor changeover from the application/drive	application	Drive	-
01	Pulse suppression by application/drive	application	Drive	-
02	Suppress drive parking for EDS changeover	Yes	No	-

Note: Re bit 00:

When the bit is set and the motor has to be changed over, then p0827 must be set differently in the appropriate motor data sets.

Re bit 02:

The bit defines whether, for an EDS changeover, the status signal Gn_ZSW.14 is suppressed (parking encoder active).

Re motor changeover to running motor:

The "flying restart" function should also be activated (p1200) when changing over to a motor that is already running.

r0835.2 CO/BO: Data set changeover status word / DDS_ZSW

ENC			
	Can be changed: -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8575
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the status word for the drive data set changeover.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
02	Internal parameter calculation active	Yes	No	-

Note: Re bit 02:

A data set changeover is delayed by the time required for the internal parameter calculation.

r0835.0...11 CO/BO: Data set changeover status word / DDS_ZSW

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8575
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the status word for the drive data set changeover.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Motor changeover active	Yes	No	8575
01	Encoder changeover active	Yes	No	-
02	Internal parameter calculation active	Yes	No	-
04	Armature short circuit active	Yes	No	-
05	Identification running	Yes	No	-
06	Friction characteristic record running	Yes	No	-
07	Rotating measurement running	Yes	No	-
08	Motor data identification running	Yes	No	-
10	Wait for pulse suppression	Yes	No	-
11	Wait for motor changeover feedback signal	Yes	No	-

Note: This parameter is only supplied with up-to-date values if data set changeover has been selected or is running.
Re bit 00:
The signal is only influenced when a motor changeover is set via p0827 (unequal bit numbers).
Re bit 01:
The signal is only influenced when an encoder changeover is set via p0187, p0188, or p0189.
Re bit 02:
A data set changeover is delayed by the time required for the internal parameter calculation.
Re bit 04:
A data set changeover is only carried out when the armature short circuit is not activated.
Re bit 05:
The following applies for SERVO:
A data set changeover is only carried out when pole position identification, encoder adjustment, motor data identification, and rotating measurement are not running.
The following applies for VECTOR:
A data set changeover is only carried out when pole position identification is not running.
Re bit 06:
A data set changeover is only carried out when the friction characteristic record is not running.
Re bit 07 (VECTOR only):
A data set changeover is only carried out when rotating measurement is not running.
Re bit 08 (VECTOR only):
A data set changeover is only carried out when motor data identification is not running.
Re bit 10:
A motor changeover is set with p0833.1 = 1. It can only be carried out when the application performs pulse suppression.
Re bit 11:
A motor changeover is set with p0833.0 = 1. The pulses are only enabled when the "Motor changeover feedback" signal is detected.

r0836.0...3 CO/BO: Command Data Set CDS selected / CDS selected

04	DDS select. bit 4	ON	OFF	-

Dependency: Refer to: r0051, p0820, p0821, p0822, p0823, p0824

Note: Drive data sets are selected via binector input p0820 and following.

The currently effective drive data set is displayed in r0051.

If there is only one data set, then a value of 0 is displayed in this parameter and not the selection via binector inputs.

r0838[0...3] Motor/Encoder Data Set selected / MDS/EDS selected

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 8565
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the selected Motor Data Set (MDS) and the selected Encoder Data Sets (EDS).

Index:
[0] = Motor Data Set MDS selected
[1] = Encoder 1 Encoder Data Set EDS selected
[2] = Encoder 2 Encoder Data Set EDS selected
[3] = Encoder 3 Encoder Data Set EDS selected

Dependency: Refer to: r0049, p0186, p0187, p0188, p0189

Note: Value 99 means the following: No encoder assigned (not configured).

p0839 Motor changeover contactor control delay time / Mot_chg ctrl t_del

VECTOR_G

Can be changed: C2(3)	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	500 [ms]	0 [ms]

Description: Sets the delay time for the contactor control for the motor changeover.

Note: The delay time is taken into account in the following cases:

- for feedback signal, previous contactor "Open". The new motor contactor is controlled (energized) after the delay time has expired.
- for the feedback signal, new motor contactor "Closed". The pulses are enabled after the delay time has expired.

p0840[0...n] BI: ON / OFF (OFF1) / ON / OFF (OFF1)

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501, 2610, 8720, 8820, 8920
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the command "ON/OFF (OFF1)".

For the PROFIdrive profile, this command corresponds to control word 1 bit 0 (STW1.0).

Recommend.: When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.

Dependency: Refer to: p1055, p1056

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: For binector input p0840 = 0 signal, the motor can be moved, jogging using binector input p1055 or p1056.

The command "ON/OFF (OFF1)" can be issued using binector input p0840 or p1055/p1056.

For binector input p0840 = 0 signal, the switch-on inhibit is acknowledged.

Only the signal source that originally powered up can also power down again.

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For drives with closed-loop speed control (p1300 = 20, 21), the following applies:

- BI: p0840 = 0 signal: OFF1 (braking with the ramp-function generator, then pulse suppression)

For drives with closed-loop torque control (p1300 = 22, 23), the following applies:

- BI: p0840 = 0 signal: immediate pulse suppression

For drives with closed-loop torque control (activated using p1501), the following applies:

- BI: p0840 = 0 signal: No dedicated braking response, but pulse cancelation when standstill is detected (p1226, p1227)

For drives with closed-loop speed/torque control, the following applies:

- BI: p0840 = 0/1 signal: ON (pulses can be enabled)

For active infeeds (Active Line Module and Smart Line Module) the following applies:

- BI: p0840 = 0 signal: OFF1 (reduce Vdc along the ramp, then pulse suppression and pre-charging contactor/line contactor open)
- BI: p0840 = 0/1 signal: ON (pre-charging contactor/line contactor close, pulses can be enabled)

For passive infeeds (Basic Line Module) the following applies:

- BI: p0840 = 0 signal: OFF1 (pre-charging contactor/line contactor open)
- BI: p0840 = 0/1 signal: ON (pre-charging contactor/line contactor close)

r0863.1 of a drive can also be selected as signal source.

p0844[0...n] BI: No coast-down / coast-down (OFF2) signal source 1 / OFF2 S_src 1

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501, 8720, 8820, 8920
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the first signal source for the command "No coast down/coast down (OFF2)".

The following signals are AND'ed:

- BI: p0844 "No coast-down / coast-down (OFF2) signal source 1"
- BI: p0845 "No coast-down / coast-down (OFF2) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 1 (STW1.1).

BI: p0844 = 0 signal or BI: p0845 = 0 signal

- OFF2 (immediate pulse suppression and switch on inhibit)

BI: p0844 = 1 signal and BI: p0845 = 1 signal

- No OFF2 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For Active Line Modules, Smart Line Modules and binector input p0844 = 0 signal or p0845 = 0 signal, the following applies:

- pre-charging contactor/line contactor is additionally opened.

p0845[0...n]	**BI: No coast-down / coast-down (OFF2) signal source 2 / OFF2 S_src 2**		
B_INF, VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501, 8720, 8820, 8920
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the second signal source for the command "No coast down/coast down (OFF2)".

The following signals are AND'ed:

- BI: p0844 "No coast-down / coast-down (OFF2) signal source 1"
- BI: p0845 "No coast-down / coast-down (OFF2) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 1 (STW1.1).

BI: p0844 = 0 signal or BI: p0845 = 0 signal

- OFF2 (immediate pulse suppression and switch on inhibit)

BI: p0844 = 1 signal and BI: p0845 = 1 signal

- No OFF2 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is effective.

Note: For Active Line Modules, Smart Line Modules and binector input p0844 = 0 signal or p0845 = 0 signal, the following applies:

- pre-charging contactor/line contactor is additionally opened.

p0848[0...n]	**BI: No Quick Stop / Quick Stop (OFF3) signal source 1 / OFF3 S_src 1**		
VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the first signal source for the command "No quick stop/quick stop (OFF3)".

The following signals are AND'ed:

- BI: p0848 "No quick stop / quick stop (OFF3) signal source 1"
- BI: p0849 "No quick stop / quick stop (OFF3) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 2 (STW1.2).

BI: p0848 = 0 signal or BI: p0849 = 0 signal

- OFF3 (braking along the OFF3 ramp (p1135), then pulse suppression and switch on inhibit)

BI: p0848 = 1 signal and BI: p0849 = 1 signal

- No OFF3 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For drives with closed-loop torque control (activated using p1501), the following applies:

BI: p0848 = 0 signal:

- No dedicated braking response, but pulse suppression when standstill is detected (p1226, p1227).

p0849[0...n] **BI: No Quick Stop / Quick Stop (OFF3) signal source 2 / OFF3 S_src 2**

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the second signal source for the command "No quick stop/quick stop (OFF3)".
The following signals are AND'ed:
- BI: p0848 "No quick stop / quick stop (OFF3) signal source 1"
- BI: p0849 "No quick stop / quick stop (OFF3) signal source 2"
For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 2 (STW1.2).
BI: p0848 = 0 signal or BI: p0849 = 0 signal
- OFF3 (braking along the OFF3 ramp (p1135), then pulse suppression and switch on inhibit)
BI: p0848 = 1 signal and BI: p0849 = 1 signal
- No OFF3 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is effective.

Note: For drives with closed-loop torque control (activated using p1501), the following applies:
BI: p0849 = 0 signal:
- No dedicated braking response, but pulse suppression when standstill is detected (p1226, p1227).

p0852[0...n] **BI: Enable operation/inhibit operation / Operation enable**

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501, 8820, 8920
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the command "enable operation/inhibit operation".
For the PROFIdrive profile, this command corresponds to control word 1 bit 3 (STW1.3).
BI: p0852 = 0 signal
Inhibit operation (suppress pulses).
BI: p0852 = 1 signal
Enable operation (pulses can be enabled).

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0854[0...n] **BI: Control by PLC/no control by PLC / Master ctrl by PLC**

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501, 8720, 8820, 8920
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the command "control by PLC/no control by PLC".

For the PROFIdrive profile, this command corresponds to control word 1 bit 10 (STW1.10).
BI: p0854 = 0 signal
No control by PLC
BI: p0854 = 1 signal
Master control by PLC.

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This bit is used to initiate a response for the drives when the control fails (F07220). If there is no control available, then binector input p0854 should be set to 1.

If a control is available, then STW1.10 must be set to 1 (PZD1) so that the received data is updated. This applies regardless of the setting in p0854 and even in the case of free telegram configuration (p0922 = 999).

p0854 BI: Control by PLC/no control by PLC / Master ctrl by PLC

ENC			
	Can be changed: T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2501, 8720, 8820, 8920
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the signal source for the command "control by PLC/no control by PLC".
For the PROFIdrive profile, this command corresponds to control word 1 bit 10 (STW1.10).
BI: p0854 = 0 signal
No control by PLC
BI: p0854 = 1 signal
Master control by PLC.

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This bit is used to initiate a response for the drives when the control fails (F07220). If there is no control available, then binector input p0854 should be set to 1.

If a control is available, then STW1.10 must be set to 1 (PZD1) so that the received data is updated. This applies regardless of the setting in p0854 and even in the case of free telegram configuration (p0922 = 999).

p0855[0...n] BI: Unconditionally release holding brake / Uncond open brake

VECTOR_G			
	Can be changed: T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501, 2701, 2707
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the command "unconditionally open holding brake".

Dependency: Refer to: p0858

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The signal via BI: p0858 (unconditionally close holding brake) has a higher priority than via BI: p0855 (unconditionally open holding brake).

p0856[0...n] BI: Speed controller enable / n_ctrl enable

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501, 2701, 2707
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the command "enable speed controller" (r0898.12).

0 signal: Set the I component and speed controller output to zero.

1 signal: Enable speed controller.

Dependency: Refer to: r0898

Note: If "enable speed controller" is withdrawn, then an existing brake will be closed.

If "speed controller enable" is withdrawn, the pulses are not suppressed.

p0857 Power unit monitoring time / PU t_monit

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8760, 8864, 8964
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
100.0 [ms]	60000.0 [ms]	6000.0 [ms]

Description: Sets the monitoring time for the power unit.

The following applies for infeeds and drives:

The monitoring time is started after an 0/1 edge of the ON/OFF1 command. If the power unit does not return a READY signal within the monitoring time, then fault F06000 (infeeds) or F07802 (drives) is output.

For drives, the following also applies:

After the pulse enable (operation enabled, p0852), the monitoring time is re-started. If the infeed does not signal ready to the drive within the monitoring time (using BI: p0864 of the drive), fault F07840 is initiated.

Notice: The maximum time to pre-charge the DC link is monitored in the power unit and cannot be changed. The maximum duration of the pre-charging depends on the power class and the power unit design.

The monitoring time for the pre-charging is started after the ON command (BI: p0840 = 0/1 signal). Fault F30027 is output when the maximum pre-charging duration is exceeded.

Note: The factory setting for p0857 depends on the power class and the design of the power unit.

The monitoring time for the ready signal of the power unit includes the time to pre-charge the DC link and, if relevant, the de-bounce time of the contactors.

If an excessively low value is entered into p0857, then after enable, this results in the corresponding fault.

p0858[0...n] BI: Unconditionally close holding brake / Uncond close brake

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501, 2701, 2707
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the command "unconditionally close holding brake".

Dependency: Refer to: p0855

Note: The signal via BI: p0858 (unconditionally close holding brake) has a higher priority than via BI: p0855 (unconditionally open holding brake).

For a 1 signal via BI: p0858, the command "unconditionally close the holding brake" is executed and internally a zero setpoint is entered.

p0860 BI: Line contactor feedback signal / Line contact feedb

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2634, 8734, 8834, 8934
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	863.1

Description: Sets the signal source for the feedback signal from the line contactor.

Recommend.: When the monitoring is activated (BI: p0860 not equal to r0863.1), then to control the line contactor, signal BO: r0863.1 of its own drive object should be used.

Dependency: Refer to: p0861, r0863

Notice: The line contactor monitoring is de-activated if the control signal of the particular drive object is set as the signal source for the feedback signal of the line contactor (BI: p0860 = r0863.1).

Note: The state of the line contactor is monitored depending on signal BO: r0863.1.

When the monitoring is activated (BI: p0860 not equal to r0863.1), fault F07300 is then also output if the contactor is closed before it is controlled using r0863.1.

p0861 Line contactor monitoring time / LineContact t_mon

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2634, 8734, 8834, 8934
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	5000 [ms]	100 [ms]

Description: Sets the monitoring time of the line contactor.

This time starts each time that the line contactor switches (r0863.1). If a feedback signal is not received from the line contactor within the time, a message is output.

Dependency: Refer to: p0860, r0863

Note: The monitoring function is disabled for the factory setting of p0860.

p0862 Power unit ON delay / PU t_on

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2610, 8732, 8832, 8932
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	65000 [ms]	0 [ms]

Description: Sets the delay time for the control command of the power unit and a line contactor, if used.

Note: This means that it is possible to realize a shifted (delayed) pre-charging or power-on using a single ON command.

When the infeed units are active, before the line contactor is closed, an offset adjustment of the current measurement is carried out for a duration of 120 ms (p3491).

r0863.0...2 CO/BO: Drive coupling status word/control word / CoupleZSW/STW

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the status word and control word of the drive coupling.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Closed-loop control operation	Yes	No	2610, 8710, 8810, 8910
01	Energize contactor	Yes	No	2610, 2634, 7990, 8734, 8834, 8934
02	Infeed line supply failure	Yes	No	-

Dependency: Refer to: p0864

Note: Re bit 00:

Bit 0 signals that the infeed is ready.

When the operating signal is transferred via binector output r0863.0 this allows several drives to start (run-up) staggered over time when they are simultaneously powered up.

To realize this, the following connections/interconnections are required:

Drive 1: Interconnect binector input p0864 with binector output r0863.0 of the infeed

Drive 2: Interconnect binector input p0864 with binector output r0863.0 of drive 1

Drive 3: Interconnect binector input p0864 with binector output r0863.0 of drive 2 etc.

The first drive only transfers the operating signal to the next drive after it has reached its ready condition.

Re bit 01:

Bit 1 is used to control an external line contactor.

Re bit 02:

This bit only signals line supply failure for Active Infeed (A_INF) and Smart Infeed (S_INF).

p0864 BI: Infeed operation / INF operation

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2610, 8710, 8910
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the operating signal of the infeed (e.g. BO: r0863.0).

Dependency: Refer to: r0863

Note: The sequence control of a servo/vector drive requires this signal.

The following applies for an infeed without DRIVE-CLiQ:

For these infeeds, the "ready" message is available via an output terminal. This signal must be connected to a digital input. The drives supplied from this infeed must use this signal as ready signal (BI: p0864 = digital input).

p0867 Power unit main contactor holding time after OFF1 / PU t_MC after OFF1

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [ms]	500.0 [ms]	50.0 [ms]

Description: Sets the main contactor holding time after OFF1

Dependency: Refer to: p0869

Note: After withdrawing the OFF1 enable (source of p0840), the main contactor is opened after the main contactor holding time has elapsed.

For p0869 = 1 (keep main contactor closed for STO), after withdrawing STO, the switch-on inhibit must be acknowledged via the source of p0840 = 0 (OFF1) – and before the main contactor holding time expires, should go back to 1, otherwise the main contactor will open.

When operating a drive connected to SINUMERIK, which only closes the main contactor with the OFF1 command (blocksize, chassis), p0867 should be set as a minimum to 50 ms.

p0868 Power unit DC switch debounce time / PU DC sw t_deboun

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	65000 [ms]	65000 [ms]

Description: Sets the debounce time for the DC circuit breaker for Motor Modules in "chassis" format.

Note: The following applies if p0868 = 65000 ms:

The debounce time defined internally in the power unit's EEPROM is implemented.

p0869 Sequence control configuration / Seq_ctrl config

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for the sequence control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Keep main contactor closed for STO	Yes	No	-

Dependency: Refer to: p0867

Note: Re bit 00:

After withdrawing the OFF1 enable (source of p0840), the main contactor is opened after the main contactor holding time has elapsed.

For p0869.0 = 1, after withdrawing STO, the switch-on inhibit must be acknowledged via the source of p0840 = 0 (OFF1) – and before the main contactor holding time expires (p0867), should go back to 1, otherwise the main contactor will open.

r0873 CO/BO: Infeed total operation / INF total oper

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8732, 8832
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the operational readiness of the infeeds when using Smart Line Module (SLM) and Basic Line Module (BLM) together (mixed operation).

In order that signal BO: r0873 is available at one of the infeeds, then BI: p0874 of the one infeed must be interconnected to BO: r0863.0 of the other infeed.

Dependency: Refer to: r0863, p0874

Note: Mixed operation is not possible with the Active Line Module (ALM)!

p0874 — BI: Smart/ Basic Line Module operation / SLM/BLM operation

B_INF

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 8732, 8832
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Setting to interconnect the ready signal for mixed operation of Smart Line Module (SLM) and Basic Line Module (BLM).

In order that signal BO: r0873 is available at one of the infeeds, then BI: p0874 of the one infeed must be interconnected to BO: r0863.0 of the other infeed.

Dependency: Refer to: r0863, r0873

Note: Mixed operation is not possible with the Active Line Module (ALM)!

p0894 — Parking pre-setting / Parking pre-set

ENC, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Pre-setting for the "Parking axis" and "Parking encoder" function.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Default with interconnection	Park	Do not park	-

Dependency: Refer to: p0480, p0897

Note: Re bit 00:

If there is at least one BICO interconnection for "Parking axis" or "Parking encoder", this default setting is taken into consideration during power-up.

p0895[0...n] — BI: Activate/de-activate power unit components / PU_comp act/deact

B_INF, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source to activate/de-activate a power unit component.

Dependency: BI: p0895 = 0 signal

De-activate power unit components.

BI: p0895 = 1 signal

Activate power unit components

Refer to: p0125, r0126

Caution: It is not permissible to de-activate drive objects with safety functions enabled.

Notice: For Active Line Modules in the "Chassis" format, the Voltage Sensing Module (VSM, p0145) belonging to the power unit is automatically activated/deactivated.

Note: The power unit is only de-activated when the pulses are suppressed.

For units connected in parallel, when one of the power units is de-activated, then the enable in p7001 is withdrawn.

r0896.0 BO: Parking axis, status word / Parking axis, ZSW

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2

15	Setpoint enable from the brake control	Yes	No	-

Note: Re bits 00, 01, 02, 04, 05, 06, 09:

For PROFIdrive, these signals are used for status word 1.

Re bit 13:

When the "Safe Brake Control" (SBC) is activated and selected, the brake is no longer controlled using this signal.

Re bit 14, 15:

These signals are only of significance when the "extended brake control" function module is activated (r0108.14 = 1).

p0918 PROFIBUS address / PB address

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2401, 2410
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	126	126

Description: Displays or sets the PROFIBUS address for PROFIBUS interface on the Control Unit.

The address can be set as follows:

1) Using the address switch on the Control Unit.

--> p0918 can then only be read and displays the selected address.

--> A change only becomes effective after a POWER ON.

2) Using p0918

--> Only if the address 00 hex, 7F hex, 80 hex, or FF hex has been set using the address switch.

--> The address is saved in a non-volatile fashion using the function "copy from RAM to ROM".

--> A change only becomes effective after a POWER ON.

Note: Permissible PROFIBUS addresses: 1 ... 126 (01 hex ... 7E hex)

Address 126 is used for commissioning.

Every PROFIBUS address change only becomes effective after a POWER ON.

The parameter is not influenced by setting the factory setting.

Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Lists the fault codes stored in the drive unit.
The indices can only be accessed with a valid fault code.

Dependency: The parameter assigned to the fault code is entered in r0951 under the same index.

r0947[0...63] Fault number / Fault number

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: This parameter is identical to r0945.

r0948[0...63] Fault time received in milliseconds / t_fault recv ms

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8050, 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the fault occurred.

Dependency: Refer to: r0945, r0947, r0949, r2109, r2114, r2130, r2133, r2136, r3115, r3120, r3122

Notice: The time comprises r2130 (days) and r0948 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.
When the parameter is read via PROFIdrive, the TimeDifference data type applies.

r0949[0...63] Fault value / Fault value

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 8050, 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays additional information about the fault that occurred (as integer number).

Dependency: Refer to: r0945, r0947, r0948, r2109, r2130, r2133, r2136, r3115, r3120, r3122

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.

p0952	Fault cases counter / Fault cases qty		
All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 6700, 8060
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Number of fault situations that have occurred since the last reset.

Dependency: The fault buffer is deleted (cleared) by setting p0952 to 0.

Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136

r0963	PROFIBUS baud rate / PB baud rate		
CU_G130_DP, CU_G150_DP	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Communications	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	255	-

Description: Displays the corresponding value for the PROFIBUS baud rate.

Value:
0: 9.6 kbit/s
1: 19.2 kbit/s
2: 93.75 kbit/s
3: 187.5 kbit/s
4: 500 kbit/s
6: 1.5 Mbit/s
7: 3 Mbit/s
8: 6 Mbit/s
9: 12 Mbit/s
10: 31.25 kbit/s
11: 45.45 kbit/s
255: Unknown

r0964[0...6]	Device identification / Device ident		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Communications	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the device identification.

Index:
[0] = Company (Siemens = 42)
[1] = Device type
[2] = Firmware version
[3] = Firmware date (year)
[4] = Firmware date (day/month)
[5] = Number of drive objects
[6] = Firmware patch/hot fix

Note: Example:

r0964[0] = 42 --> SIEMENS

r0964[1] = device type, see below

r0964[2] = 403 --> first part of the firmware version V04.03 (for second part, refer to index 6)

r0964[3] = 2010 --> year 2010

r0964[4] = 1705 --> 17th of May

r0964[5] = 2 --> 2 drive objects

r0964[6] = 200 --> second part, firmware version (complete version: V04.03.02.00)

Device type:
r0964[1] = 5200 --> SINAMICS G150 CU320-2 DP
r0964[1] = 5201 --> SINAMICS G150 CU320-2 PN
r0964[1] = 5210 --> SINAMICS G130 CU320-2 DP
r0964[1] = 5211 --> SINAMICS G130 CU320-2 PN

r0965 PROFIdrive profile number / PD profile number

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the PROFIdrive profile number and profile version.

Constant value = 0329 hex.

Byte 1: Profile number = 03 hex = PROFIdrive profile

Byte 2: Profile version = 29 hex = Version 4.1

Note: When the parameter is read via PROFIdrive, the Octet String 2 data type applies.

p0969 System runtime relative / t_System relative

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8050, 8060
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	4294967295 [ms]	0 [ms]

Description: Displays the system runtime in ms since the last POWER ON.

Note: The value in p0969 can only be reset to 0.

The value overflows after approx. 49 days.

When the parameter is read via PROFIdrive, the TimeDifference data type applies.

p0970 Reset infeed parameter / INF par reset

B_INF

Can be changed: C2(30)	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Factory settings	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	100	0

Description: The parameter is used to initiate a reset of the parameters of an individual infeed unit.

The parameters of the basic commissioning (refer to p0009) are in this case not reset (p0107, p0108, p0121, p0170). These can only be reset using the factory setting of the complete drive unit (p0976).

The sampling times (p0111, p0112, p0115) are only not reset if this results in a conflict with the basic clock cycle (p0110).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).

At the end of the calculations, p0970 is automatically set to 0.

Parameter reset has been completed if p0970 and p0010 have been set to 0.

p0970	ENCODER reset parameters / ENC par reset		
ENC	**Can be changed:** C2(30)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Factory settings	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	100	0

Description: The parameter is used to initiate the reset of the parameters on the ENCODER drive object.

Parameter p0141 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).

At the end of the calculations, p0970 is automatically set to 0.

Parameter reset has been completed if p0970 and p0010 have been set to 0.

p0970	TB30 reset parameters / TB30 par reset		
TB30	**Can be changed:** C2(30)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Factory settings	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Board 30 (TB30).

The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle.

Parameter p0161 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).

At the end of the calculations, p0970 is automatically set to 0.

Parameter reset has been completed if p0970 and p0010 have been set to 0.

p0970	TM150 reset parameters / TM150 par reset		
TM150	**Can be changed:** C2(30)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Factory settings	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 150 (TM150).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Dependency: Refer to: p0010

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).

At the end of the calculations, p0970 is automatically set to 0.

p0970 TM31 reset parameters / TM31 par reset

TM31

Can be changed: C2(30) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dyn. index:** - | **Func. diagram:** -
P-Group: Factory settings | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min	Max	Factory setting
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 31 (TM31).

The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle.

Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Dependency: Refer to: p0010

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).

At the end of the calculations, p0970 is automatically set to 0.

p0970 TM54F reset parameters / TM54F par reset

TM54F_MA

Can be changed: C2(30) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dyn. index:** - | **Func. diagram:** -
P-Group: Factory settings | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min	Max	Factory setting
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 54F (TM54F).

Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Start a parameter reset
5: Starts a safety parameter reset
6: Start reset non-safety/safety parameters
100: Start a BICO interconnection reset

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).

At the end of the calculations, p0970 is automatically set to 0.

Parameter reset has been completed if p0970 and p0010 have been set to 0.

For p0970 = 5 the following applies:

The password for Safety Integrated must be set.

When Safety Integrated is enabled, this can result in error messages, which then require an acceptance test to be performed.

Then save the parameters and carry out a POWER ON.

p0970 Reset drive parameters / Drive par reset

VECTOR_G

Can be changed: C2(30) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dyn. index:** - | **Func. diagram:** -
P-Group: Factory settings | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min	Max	Factory setting
0	100	0

Description: The parameter is used to initiate the reset of the parameters of an individual drive unit.

Parameters p0100, p0205 (only for VECTOR) and the parameters of the basic drive commissioning (p0009) are not reset (p0107, p0108, p0111, p0112, p0115, p0121, p0130, p0131, p0140, p0141, p0142, p0170, p0186 ... p0189). These can only be reset using the factory setting of the complete drive unit (p0976).

Value:
0: Inactive
1: Start a parameter reset
5: Starts a safety parameter reset
6: Start reset non-safety/safety parameters
100: Start a BICO interconnection reset

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).

At the end of the calculations, p0970 is automatically set to 0.

Parameter reset has been completed if p0970 and p0010 have been set to 0.

For p0970 = 5 the following applies:

The password for Safety Integrated must be set.

When Safety Integrated is enabled, this can result in error messages, which then require an acceptance test to be performed.

Then save the parameters and carry out a POWER ON.

For p0970 = 1 the following applies:

If a Safety Integrated function is parameterized (p9601), then the safety parameters are not reset. In this case, a fault F01659 is output with fault value 2.

p0971 Save drive object parameters / Drv_obj par save

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Factory settings	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to save the parameter of the particular drive object in the non-volatile memory.

When saving, only the adjustable parameters intended to be saved are taken into account.

Value:
0: Inactive
1: Save drive object

Dependency: Refer to: p0977, p1960, p3845, r3996

Notice: The Control Unit power supply may only be powered down after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0).

Writing to parameters is inhibited while saving.

The progress while saving is displayed in r3996.

Note: Starting from the particular drive object, the following parameters are saved:

CU3xx: Device-specific parameters and PROFIBUS device parameters.

Other objects: Parameters of the actual object and PROFIBUS device parameters.

Prerequisite:

In order that the parameter of a drive object, saved with p0971 = 1, is read the next time that the Control Unit is booted, then all parameters must, as a minimum, have first been saved once with p0977 = 1.

p0972 Drive unit reset / Drv_unit reset

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Sets the required procedure to execute a hardware reset for the drive unit.

Value:
0: Inactive
1: Hardware-Reset immediate

2: Hardware reset preparation
3: Hardware reset after cyclic communication has failed

Danger: It must be absolutely ensured that the system is in a safe condition.

The memory card/device memory of the Control Unit must not be accessed.

Note: If value = 1:

Reset is immediately executed and communications interrupted.

After communications have been established, check the reset operation (refer below).

If value = 2:

Help to check the reset operation.

Firstly, set p0972 = 2 and then read back. Secondly, set p0972 = 1 (it is possible that this request is possibly no longer acknowledged). The communication is then interrupted.

After communications have been established, check the reset operation (refer below).

If value = 3:

The reset is executed after interrupting cyclic communication. This setting is used to implement a synchronized reset by a control for several drive units.

If cyclic communication is not active, then the reset is immediately executed.

If the cyclic communication is active for both PROFIdrive interfaces, then the reset is executed after completing both cycle communications.

After communications have been established, check the reset operation (refer below).

To check the reset operation:

After the drive unit has been restarted and communications have been established, read p0972 and check the following:

p0972 = 0? --> The reset was successfully executed.

p0972 > 0? --> The reset was not executed.

r0975[0...10] Drive object identification / DO identification

All objects			
	Can be changed: -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Communications	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the identification of the drive object.

Index:
[0] = Company (Siemens = 42)
[1] = Drive object type
[2] = Firmware version
[3] = Firmware date (year)
[4] = Firmware date (day/month)
[5] = PROFIdrive drive object type class
[6] = PROFIdrive drive object sub-type Class 1
[7] = Drive object number
[8] = Reserved
[9] = Reserved
[10] = Firmware patch/hot fix

Note: Example:

r0975[0] = 42 --> SIEMENS

r0975[1] = 11 --> SERVO drive object type

r0975[2] = 102 --> first part, firmware version V01.02 (second part, refer to index 10)

r0975[3] = 2003 --> year 2003

r0975[4] = 1401 --> 14th of January

r0975[5] = 1 --> PROFIdrive drive object, type class

r0975[6] = 9 --> PROFIdrive drive object sub-type class 1

r0975[7] = 2 --> drive object number = 2

r0975[8] = 0 (reserved)

r0975[9] = 0 (reserved)

r0975[10] = 600 --> second part, firmware version (complete version: V01.02.06.00)

p0976 Reset and load all parameters / Reset load all par

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1(30)	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Factory settings	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1013	0

Description: Resets or downloads all parameters of the drive system.

Value:
0: Inactive
1: Start reset of all parameters to factory setting
2: Start dnload of param. saved in non-volatile mem w/ p0977=1
3: Start download of volatile parameters from RAM
10: Start dnload of param. saved in non-volatile mem w/ p0977=10
11: Start dnload of param. saved in non-volatile mem w/ p0977=11
12: Start dnload of param. saved in non-volatile mem w/ p0977=12
20: Start download Siemens internal setting 20
21: Start download Siemens internal setting 21
22: Start download Siemens internal setting 22
23: Start download Siemens internal setting 23
24: Start download Siemens internal setting 24
25: Start download Siemens internal setting 25
26: Start download Siemens internal setting 26
100: Start resetting of all BICO interconnections
1011: Start dnload of param. saved in volatile mem w/ p0977=1011
1012: Start dnload of param. saved in volatile mem w/ p0977=1012
1013: Start dnload of param. saved in volatile mem w/ p0977=1013

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: After all of the parameters have been reset to their factory setting, the system must be commissioned for the first time again.

Resetting or loading is realized in the non-volatile memory.

Procedure:

1. Set p0009 = 30 (parameter reset).
2. Set p0976 to "required value". The system is rebooted.

p0976 is automatically set to 0 and p0009 is automatically set to 1 after this has been carried out.

p0977 Save all parameters / Save all par

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Factory settings	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1013	0

Description: Saves all parameters of the drive system to the non-volatile memory.

When saving, only the adjustable parameters intended to be saved are taken into account.

Value:
0: Inactive
1: Save in non-volatile memory - downloaded at POWER ON
10: Save as opt. in non-vol. memory - downloaded w/ p0976=10
11: Save as opt. in non-vol. memory - downloaded w/ p0976=11
12: Save as opt. in non-vol. memory - downloaded w/ p0976=12
20: Save in non-volatile memory as setting 20 (reserved)
21: Save in non-volatile memory as setting 21 (reserved)
22: Save in non-volatile memory as setting 22 (reserved)
23: Save in non-volatile memory as setting 23 (reserved)
24: Save in non-volatile memory as setting 24 (reserved)
25: Save in non-volatile memory as setting 25 (reserved)
26: Save in non-volatile memory as setting 26 (reserved)
80: Save in non-volatile memory time-optimized (reserved)

1011: Save in volatile memory, downloaded with p0976=1011
1012: Save in volatile memory, downloaded with p0976=1012
1013: Save in volatile memory, downloaded with p0976=1013

Dependency: Refer to: p0976, p1960, p3845, r3996

Notice: The Control Unit power supply may only be powered down after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0).

Writing to parameters is inhibited while saving.

The progress while saving is displayed in r3996.

Note: Parameters saved with p0977 = 10, 11 or 12 can be downloaded again with p0976 = 10, 11 or 12.

Identification and maintenance data (I&M data, p8806 and following) are only saved for p0977 = 1.

p0978[0...n] List of drive objects / List of the DO

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1(1)	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Topology	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	255	[0] 1 [1...24] 0

Description: This parameter is an image of p0101 in conformance with PROFIdrive.

Parameters p0101 and p0978 contain the following information:

1) The same number of drive objects

2) The same drive objects

In this sense, they are consistent.

Difference between p0101 and p0978:

p0978 can be re-sorted and a zero inserted in order to identify those drive objects that participate in the process data exchange and to define their sequence in the process data exchange. Drive objects that are listed after the first zero, are excluded from the process data exchange.

For p0978, in addition, the value 255 can be inserted a multiple number of times.

p0978[n] = 255 means: The drive object is visible for the PROFIBUS master and is empty (without any actual process data exchange). This allows cyclic communications of a PROFIBUS master with unchanged configuring to the drive units with a lower number of drive objects.

Dependency: Refer to: p0101, p0971, p0977

Note: p0978 cannot be changed when the drive system is first commissioned. The reason for this is that at this time the actual topology has still not been acknowledged (p0099 is still not equal to r0098 and p0009 is set to 0).

r0979[0...10] PROFIdrive encoder format / PD encoder format

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -

r0980[0...299]	**List of existing parameters 1 / List avail par 1**		
All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the parameters that exist for this drive.

Dependency: Refer to: r0981, r0989

Note: The existing parameters are displayed in indices 0 to 298. If an index contains the value 0, then the list ends here. In a long list, index 299 contains the parameter number at which position the list continues.

This list consists solely of the following parameters:

r0980[0...299], r0981[0...299] ... r0989[0...299]

The parameters in this list are not displayed in the expert list of the commissioning software. However, they can be read from a higher-level control system (e.g. PROFIBUS master).

---

r0981[0...299] List of existing parameters 2 / List avail par 2

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -

Description: Displays the parameters that exist for this drive.

Dependency: Refer to: r0980, r0989

Note: The existing parameters are displayed in indices 0 to 298. If an index contains the value 0, then the list ends here. In a long list, index 299 contains the parameter number at which position the list continues.

This list consists solely of the following parameters:

r0980[0...299], r0981[0...299] ... r0989[0...299]

The parameters in this list are not displayed in the expert list of the commissioning software. However, they can be read from a higher-level control system (e.g. PROFIBUS master).

---

r0989[0...299] List of existing parameters 10 / List avail par 10

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the parameters that exist for this drive.

Dependency: Refer to: r0980, r0981

Note: The existing parameters are displayed in indices 0 to 298. If an index contains the value 0, then the list ends here.

This list consists solely of the following parameters:

r0980[0...299], r0981[0...299] ... r0989[0...299]

The parameters in this list are not displayed in the expert list of the commissioning software. However, they can be read from a higher-level control system (e.g. PROFIBUS master).

---

r0990[0...99] List of modified parameters 1 / List chang par 1

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays those parameters with a value other than the factory setting for this drive.

Dependency: Refer to: r0991, r0999

Note: Modified parameters are displayed in indices 0 to 98. If an index contains the value 0, then the list ends here. In a long list, index 99 contains the parameter number at which position the list continues.

This list consists solely of the following parameters:

r0990[0...99], r0991[0...99] ... r0999[0...99]

The parameters in this list are not displayed in the expert list of the commissioning software. However, they can be read from a higher-level control system (e.g. PROFIBUS master).

r0991[0...99] List of modified parameters 2 / List chang par 2

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays those parameters with a value other than the factory setting for this drive.

Dependency: Refer to: r0990, r0999

Note: Modified parameters are displayed in indices 0 to 98. If an index contains the value 0, then the list ends here. In a long list, index 99 contains the parameter number at which position the list continues.

This list consists solely of the following parameters:

r0990[0...99], r0991[0...99] ... r0999[0...99]

The parameters in this list are not displayed in the expert list of the commissioning software. However, they can be read from a higher-level control system (e.g. PROFIBUS master).

r0999[0...99] List of modified parameters 10 / List chang par 10

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays those parameters with a value other than the factory setting for this drive.

Dependency: Refer to: r0990, r0991

Note: Modified parameters are displayed in indices 0 to 98. If an index contains the value 0, then the list ends here.

This list consists solely of the following parameters:

r0990[0...99], r0991[0...99] ... r0999[0...99]

The parameters in this list are not displayed in the expert list of the commissioning software. However, they can be read from a higher-level control system (e.g. PROFIBUS master).

p1000[0...n] Macro Connector Inputs (CI) for speed setpoints / Macro CI n_set

VECTOR_G

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** CDS, p0170	**Func. diagram:** -
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	999999	0

Description: Runs the corresponding macro files.

The Connector Inputs (CI) for the speed setpoints of the appropriate Command Data Set (CDS) are appropriately interconnected.

The selected macro file must be available on the memory card/device memory.

Example:

p1000 = 6 --> the macro file PM000006.ACX is run.

Dependency: Refer to: p0015, p0700, p1500, r8572

Notice: No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!

When executing a specific macro, the corresponding programmed settings are made and become active.

Note: The macros in the specified directory are displayed in r8572. r8572 is not in the expert list of the commissioning software.

Macros available as standard are described in the technical documentation of the particular product.

CI: Connector Input

Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the selected and active fixed speed setpoint.

This setpoint is the output value for the fixed speed setpoints and must be appropriately interconnected (e.g. with the main setpoint).

Recommend.: Interconnect the signal with the main setpoint (CI: p1070 = r1024).

Dependency: Selects the required fixed speed setpoint using p1020 ... p1023.

Displays the number of the actual fixed speed setpoint in r1197.

Sets the values for the fixed speed setpoints 1 ... 15 using p1001 ... p1015.

Refer to: p1070, r1197

Note: If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).

p1030[0...n] Motorized potentiometer configuration / Mop configuration

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** 3020
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0110 bin

Description: Sets the configuration for the motorized potentiometer.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Data save active	Yes	No	-
01	Automatic mode ramp-function generator active	Yes	No	-
02	Initial rounding-off active	Yes	No	-
03	Save in NVRAM active	Yes	No	-
04	Ramp-function generator always active	Yes	No	-

Notice: The following prerequisites must be fulfilled in order to be able to save the setpoint (Bit 03 = 1) in a non-volatile fashion:

- Firmware with V2.3 or higher.

- Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).

Note: Re bit 00:

0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p1040.

1: The setpoint for the motorized potentiometer is saved after OFF and after ON set to the saved value. In order to save in a non-volatile fashion, bit 03 should be set to 1.

Re bit 01:

0: Without ramp-function generator in the automatic mode (ramp-up/ramp-down time = 0).

1: With ramp-function generator in the automatic mode.

For manual operation (0 signal via BI: p1041), the ramp-function generator is always active.

Re bit 02:

0: Without initial rounding-off

1: With initial rounding-off. The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed).

The jerk for the initial rounding-off is independent of the ramp-up time and only depends on the selected maximum speed (p1082). It is calculated as follows:

r = 0.01 % * p1082 [1/s] / 0.13^2 [s^2]

The jerk acts up until the maximum acceleration is reached (a_max = p1082 [1/s] / p1047 [s]), and then the drive continues to run linearly with a constant rate of acceleration. The higher the maximum acceleration (the lower that p1047 is), the longer the ramp-up time increases with respect to the set ramp-up time.

Re bit 03:

0: Non-volatile data save de-activated.

1: The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for bit 00 = 1).

Re bit 04:

When the bit is set, the ramp-function generator is computed independent of the pulse enable. The actual output value of the motorized potentiometer is always in r1050.

p1035[0...n] BI: Motorized potentiometer setpoint raise / Mop raise

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2505, 3020
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to continually increase the setpoint for the motorized potentiometer.

The setpoint change (CO: r1050) depends on the set ramp-up time (p1047) and the duration of the signal that is present (BI: p1035).

Dependency: Refer to: p1036

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1036[0...n] BI: Motorized potentiometer lower setpoint / Mop lower

VECTOR_G

	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the effective supplementary setpoint. The value shown is the additional setpoint after scaling.

r1078	CO: Total setpoint effective / Total setpoint eff		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3030
	P-Group: Setpoints	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the total effective setpoint.
The value indicates the sum of the effective main setpoint and supplementary setpoint.

p1080[0...n]	Minimum speed / n_min		
VECTOR_G	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 3050
	P-Group: Setpoints	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [rpm]	19500.000 [rpm]	0.000 [rpm]

Description: Sets the lowest possible motor speed.
This value is not undershot in operation.

Dependency: Refer to: p1106

Notice: The effective minimum speed is formed from p1080 and p1106.

Note: The parameter value applies for both motor directions.
In exceptional cases, the motor can operate below this value (e.g. when reversing).

p1081	Maximum speed scaling / n_max scal		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3050, 3095
	P-Group: Setpoints	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min	**Max**	**Factory setting**
	100.00 [%]	105.00 [%]	100.00 [%]

Description: Sets the scaling for the maximum speed (p1082).
For a higher-level speed control, this scaling allows the maximum speed to be briefly exceeded.

Dependency: Refer to: p1082

Notice: Continuous operation above a scaling of 100 % is not permitted.

p1082[0...n]	**Maximum speed / n_max**		
VECTOR_G	**Can be changed:** C2(1), T	**Calculated:** CALC_MOD_ALL	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 2820, 3020, 3050, 3060, 3070, 3095
	P-Group: Setpoints	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [rpm]	210000.000 [rpm]	1500.000 [rpm]

Description: Sets the highest possible speed.

Dependency: For vector control (p1300 = 20 ... 23) the maximum speed is limited to 60.0 / (8.333 x p0115[0] x r0313). This can be identified by a reduction in r1084. p1082 is not changed in this process due to the fact that the operating mode p1300 can be changed over.

If a sine-wave filter (p0230 = 3) is parameterized as output filter, then the maximum speed is limited corresponding to the maximum permissible filter output frequency (refer to the filter data sheet). When using sine-wave filters (p0230 = 3, 4), the maximum speed r1084 is limited to 70% of the resonant frequency of the filter capacitance and the motor leakage inductance.

For reactors and dU/dt filters, it is limited to 150 Hz * 60 / r0313 (for chassis power units) or 120 Hz x 60 / r0313 (for booksize power units).

Refer to: p0115, p0230, r0313, p0322, p0324, r0336, p0532

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: The parameter applies for both motor directions.

The parameter has a limiting effect and is the reference quantity for all ramp-up and ramp-down times (e.g. down ramps, ramp-function generator, motor potentiometer).

Since the parameter is part of quick commissioning (p0010 = 1), it is defined appropriately when p0310, p0311, p0322, p0324, p0530, p0531, and p0532 are changed.

The following limits are always effective for p1082:

p1082 <= min(p0324, p0532) if p0324 > 0 and p0532 > 0

p1082 <= p0322 if p0324 = 0 or p0532 = 0 and p0322 > 0

p1082 <= 60 x minimum (15 x r0336, 650 Hz) / r0313

p1082 <= 60 x Maximum power unit pulse frequency / (k x r0313)

k = 12 for vector control (r0108.2 = 1), k = 6.5 for U/f control (r0108.2 = 0)

For the automatic calculation (p0340 = 1) the value of the parameter is pre-assigned the maximum motor speed (p0322). If p0322 = 0, the rated motor speed (p0311) is used as default (pre-assignment) value. For induction motors that are not catalog motors (p0301 = 0), the synchronous no-load speed is used as default (pre-assignment) value (p0310 x 60 / r0313).

For synchronous motors, the following additionally applies:

The maximum speed p1082 is restricted to speeds (r1084) where the EMF does not exceed the DC link voltage.

The effective assignment of the motor data set parameter (e.g. p0311) to the drive data set parameter p1082 when pre-assigning should be taken from p0186.

p1082 is also available in the quick commissioning (p0010 = 1); this means that when exiting via p3900 > 0, the value is not changed.

P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for scaling the skip speeds.

Dependency: Refer to: p1091, p1092, p1093, p1094

r1099.0 CO/BO: Skip band status word / Skip band ZSW

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the skip bands.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	r1170 within the skip band	Yes	No	3050

Dependency: Refer to: r1170

Note: Re bit 00:

With the bit set, the setpoint speed is within the skip band after the ramp-function generator (r1170).

The signal can be used to switch over the drive data set (DDS).

p1101[0...n] Skip speed bandwidth / n_skip bandwidth

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 3050
P-Group: Setpoints	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [rpm]	210000.000 [rpm]	0.000 [rpm]

Description: Sets the bandwidth for the skip speeds/velocities 1 to 4.

Dependency: Refer to: p1091, p1092, p1093, p1094

Note: The setpoint (reference) speeds are skipped (suppressed) in the range of the skip speed +/-p1101.

Steady-state operation is not possible in the skipped (suppressed) speed range. The skip (suppression) range is skipped.

Example:

p1091 = 600 and p1101 = 20

--> setpoint speeds between 580 and 620 [rpm] are skipped.

For the skip bandwidths, the following hysteresis behavior applies:

For a setpoint speed coming from below, the following applies:

r1170 < 580 [rpm] and 580 [rpm] <= r1114 <= 620 [rpm] --> r1119 = 580 [rpm]

For a setpoint speed coming from above, the following applies:

r1170 > 620 [rpm] and 580 [rpm] <= r1114 <= 620 [rpm] --> r1119 = 620 [rpm]

	P-Group: Setpoints	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the setpoint at the input of the ramp-function generator.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The setpoint is influenced by other functions, e.g. skip (suppressed) speeds, minimum and maximum limits.

p1120[0...n]	**Ramp-function generator ramp-up time / RFG ramp-up time**		
VECTOR_G	**Can be changed:** C2(1), U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 3060, 3070
	P-Group: Setpoints	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [s]	999999.000 [s]	10.000 [s]

Description: The ramp-function generator ramps-up the speed setpoint from standstill (setpoint = 0) up to the maximum speed (p1082) in this time.

Dependency: Refer to: p1082, p1138

Note: The ramp-up time can be scaled via connector input p1138.

The parameter is adapted during the rotating measurement (p1960 > 0). This is the reason that during the rotating measurement, the motor can accelerate faster than was originally parameterized.

For U/f control and sensorless vector control (see p1300), a ramp-up time of 0 s is not expedient. The setting should be based on the startup times (r0345) of the motor.

p1121[0...n] Ramp-function generator ramp-down time / RFG ramp-down time

VECTOR_G

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 3060, 3070
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	999999.000 [s]	10.000 [s]

Description: Sets the ramp-down time for the ramp-function generator.

The ramp-function generator ramps-down the speed setpoint from the maximum speed (p1082) down to standstill (setpoint = 0) in this time.

Further, the ramp-down time is always effective for OFF1.

Dependency: Refer to: p1082, p1139

Note: For U/f control and sensorless vector control (see p1300), a ramp-down time of 0 s is not expedient. The setting should be based on the startup times (r0345) of the motor.

P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for bypassing the ramp generator (ramp-up and ramp-down times = 0).

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For VECTOR in encoderless operation, it is not permissible that the ramp-function generator is bypassed.

p1130[0...n] Ramp-function generator initial rounding-off time / RFG t_start_round

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 3070
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	30.000 [s]	0.000 [s]

Description: Sets the initial rounding-off time for the extended ramp generator. The value applies to ramp-up and ramp-down.

Note: Rounding-off times avoid an abrupt response and prevent damage to the mechanical system.

p1131[0...n] Ramp-function generator final rounding-off time / RFG t_end_delay

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 3070
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	30.000 [s]	0.000 [s]

Description: Sets the final rounding-off time for the extended ramp generator.

The value applies to ramp-up and ramp-down.

Note: Rounding-off times avoid an abrupt response and prevent damage to the mechanical system.

p1134[0...n] Ramp-function generator rounding-off type / RFG round-off type

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 3070
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the smoothed response to the OFF1 command or the reduced setpoint for the extended ramp-function generator.

Value:
0: Cont smoothing
1: Discont smoothing

Dependency: No effect up to initial rounding-off time (p1130) > 0 s.

Note: p1134 = 0 (continuous smoothing)

If the setpoint is reduced while ramping-up, initially a final rounding-off is carried out and then the ramp-up completed. During the final rounding-off, the output of the ramp-function generator continues to go in the direction of the previous setpoint (overshoot). After the final rounding-off has been completed, the output goes toward the new setpoint.

p1134 = 1 (discontinuous smoothing)

If the setpoint is reduced while ramping-up, then the output goes immediately in the direction of the new setpoint. For the setpoint change there is no rounding-off.

p1135[0...n] OFF3 ramp-down time / OFF3 t_RD

VECTOR_G

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 2

P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for scaling the ramp-up time of the ramp-function generator.

Dependency: Refer to: p1120

Note: The ramp-up time is set in p1120.

p1139[0...n] CI: Ramp-function generator ramp-down time scaling / RFG t_RD scal

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 3060, 3070
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for scaling the ramp-down time of the ramp-function generator.

Dependency: Refer to: p1121

Note: The ramp-down time is set in p1121.

p1140[0...n] BI: Enable ramp-function generator/inhibit ramp-function generator / RFG enable

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the command "enable ramp-function generator/inhibit ramp-function generator".

For the PROFIdrive profile, this command corresponds to control word 1 bit 4 (STW1.4).

BI: p1140 = 0 signal:

Inhibits the ramp-function generator (the ramp-function generator output is set to zero).

BI: p1140 = 1 signal:

Ramp-function generator enable.

Dependency: Refer to: p1141, p1142

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1141[0...n] BI: Continue ramp-function generator/freeze ramp-function generator / Continue RFG

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the command "continue ramp-function generator/freeze ramp-function generator".

For the PROFIdrive profile, this command corresponds to control word 1 bit 5 (STW1.5).

BI: p1141 = 0 signal:

Freezes the ramp-function generator.

BI: p1141 = 1 signal:
Continue ramp-function generator.

Dependency: Refer to: p1140, p1142

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The ramp-function generator is, independent of the state of the signal source, active in the following cases:
- OFF1/OFF3.
- ramp-function generator output within the suppression bandwidth.
- ramp-function generator output below the minimum speed.

p1142[0...n] BI: Enable setpoint/inhibit setpoint / Setpoint enable

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2501
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the command "enable setpoint/inhibit setpoint".
For the PROFIdrive profile, this command corresponds to control word 1 bit 6 (STW1.6).
BI: p1142 = 0 signal
Inhibits the setpoint (the ramp-function generator input is set to zero).
BI: p1142 = 1 signal
Setpoint enable.

Dependency: Refer to: p1140, p1141

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: When the function module "position control" (r0108.3 = 1) is activated, this binector input is interconnected as follows as standard:
BI: p1142 = 0 signal

p1143[0...n] BI: Ramp-function generator, accept setting value / RFG accept set v

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 3060, 3070
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for accepting the setting value of the ramp-function generator.

Dependency: The signal source for the ramp-function generator setting value is set using parameters.
Refer to: p1144

Note: 0/1 signal:
The ramp-function generator output is immediately (without delay) set to the setting value of the ramp-function generator.
1 signal:
The setting value of the ramp-function generator is effective.
1/0 signal:
The input value of the ramp-function generator is effective. The ramp-function generator output is adapted to the input value using the ramp-up time or the ramp-down time.
0 signal:
The input value of the ramp-function generator is effective.

p1144[0...n]	CI: Ramp-function generator setting value / RFG setting value		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3

	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the ramp-function generator setting value.

Dependency: The signal source for accepting the setting value is set using parameters.

Refer to: p1143

p1145[0...n]	Ramp-function generator tracking intensity. / RFG track intens		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 3080
	P-Group: Setpoints	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0	50.0	1.3

Description: Sets the ramp-function generator tracking.

The output value of the ramp-function generator is tracked (corrected) corresponding to the maximum possible drive acceleration.

The reference value is the deviation at the speed/velocity controller input that is necessary to ensure that the motor accelerates at the torque/force limit.

Recommend.: If at least one speed setpoint filter/velocity setpoint filter is activated (p1414), then the ramp-function generator tracking should be deactivated (p1145 = 0.0). When the speed setpoint filter is activated, the output value of the ramp-function generator can no longer be tracked (corrected) corresponding to the maximum possible drive acceleration.

Re p1145 = 0.0:

This value de-activates the ramp-function generator tracking.

Re p1145 = 0.0 ... 1.0:

Generally, these values are not practical. They cause the motor to accelerate below its torque limit. The lower the selected value, the greater the margin between the controller and torque limit when accelerating.

Re p1145 > 1.0:

The greater the value, the higher the permissible deviation between the speed setpoint and speed actual value.

Notice: If ramp-function generator tracking is activated and the ramp time is set too short, this can cause unsteady acceleration.

Remedy:

- switch off ramp-function generator tracking (p1145 = 0).
- increase the ramp-up/ramp-down time (p1120, p1121).

Note: In the U/f mode, ramp-function generator tracking is not active.

For SERVO with U/f operation, the following applies:

The complete ramp-function generator is not active, i.e. ramp-up and ramp-down time = 0.

p1148[0...n]	Ramp-function gen. tolerance for ramp-up and ramp-down active / RFG tol HL/RL act		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 3060, 3070
	P-Group: Setpoints	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [rpm]	1000.000 [rpm]	19.800 [rpm]

Description: Sets the tolerance value for the status of the ramp-function generator (ramp-up active, ramp-down active).

If the input of the ramp-function generator does not change in comparison to the output by more than the entered tolerance time, then the status bits "ramp-up active" and "ramp-down active" are not influenced.

Dependency: Refer to: r1199

p1151[0...n] Ramp-function generator configuration / RFG config

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for the extended ramp-function generator.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Disable rounding-off at the zero cross-over	Yes	No	3070
01	RFG tracking without polarity change	Yes	No	-
02	RFG tracking with polarity change	Yes	No	-

Dependency: Re bit 01, 02 = 1:

These bits are only effective when ramp-function generator tracking is activated (p1145 > 0).

When both bits are activated, RFG tracking with polarity change is active.

Re bit 01 = 0, bit 02 = 0:

When ramp-function generator tracking is active, the setpoint can only change in the direction of the target setpoint – or be frozen.

Notice: Re bit 00 = 1:

If the ramp-up time is longer than the ramp-down time (p1120 > p1121), then there is an acceleration step at the zero crossover. This can have a negative impact on the mechanical system.

Note: Re bit 00 = 1:

When the direction change is changed there is no rounding-off before and after the zero crossover.

Re bit 01 = 1:

For load surges, the ramp-function generator output tracks the actual value. The tracking (correction) ends at a setpoint of zero.

Re bit 02 = 1:

For load surges, the ramp-function generator output tracks the actual value. For a polarity change, the tracking (correction) is continued.

06	Maximum limit active	Yes	No	-
07	Ramp-function generator acceleration positive	Yes	No	-
08	Ramp-function generator acceleration negative	Yes	No	-

Note: Re bit 02:

The bit is the result of the OR logic operation - bit 00 and bit 01.

p1200[0...n] Flying restart operating mode / FlyRest op_mode

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 6300
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	0

Description: Sets the operating mode for flying restart.

The flying restart allows the drive converter to be powered up while the motor is still rotating. In so doing, the drive converter output frequency is changed until the actual motor speed/velocity is found. The motor then accelerates up to the setpoint at the ramp-function generator setting.

Value:

0: Flying restart inactive
1: Flying restart always active (start in setpoint direction)
2: FlyRestart active after on, fault, OFF2 (start in setp. dir.)
3: FlyRestart active after fault, OFF2 (start in setp. direction)
4: Flying restart always active (start only in setpoint direction)
5: FlyRestart active after on, fault, OFF2 (start only in setp_dir)
6: FlyRestart active after fault, OFF2 (start only in setp. dir.)

Dependency: For induction motors, the following applies:

A differentiation is made between flying restart for U/f control and for vector control (p1300).

Flying restart, U/f control: p1202, p1203, r1204

Flying restart, vector control: p1202, p1203, r1205

For synchronous motors, the following applies:

Flying restart is not possible with U/f control or if, in the case of sensorless vector control, a Voltage Sensing Module (VSM) has not been connected and parameterized.

If two VSMs are connected to the Motor Module, then the motor voltage for the flying restart is measured using the second VSM (see p0151[1]).

If only one VSM is connected, then this can be used for the flying restart (p1200) (for induction motors, also see p0247 bit 5). When activating flying restart, line synchronization must be deactivated (p3800 = 0).

Refer to: p1201

Notice: The "flying restart" function must be used in cases where the motor may still be running (e.g. after a brief line supply interruption) or is being driven by the load. The system might otherwise shut down as a result of overcurrent.

It does not make sense to use "flying restart" together with the "motor holding brake function" (p1215 > 0) because then the flying restart will always be realized with the motor stationary.

Note: For p1200 = 1, 4, the following applies:

Flying restart is active after faults, OFF1, OFF2, OFF3.

For p1200 = 2, 5, the following applies:

The "power-on" is the first power-on operation after the drive system has been booted. This is practical for motors with a high-inertia load.

For p1200 = 1, 2, 3, the following applies: The search is made in both directions.

For p1200 = 4, 5, 6, the following applies: The search is only made in the setpoint direction. For a setpoint of zero, a search is not made in the negative direction of rotation.

For operation with encoder, the following applies:

p1200 = 1, 4 as well as p1200 = 2, 5 and p1200 = 3, 6 have the same meaning.

For U/f control (p1300 < 20), the following applies:

The speed can only be sensed for values above approx. 5 % of the rated motor speed. For lower speeds, it is assumed that the motor is at a standstill.

If p1200 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1200 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).

p1201[0...n] BI: Flying restart enable signal source / Fly_res enab S_src

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the signal source to enable the "flying restart" function.

Dependency: Refer to: p1200

Note: Withdrawing the enable signal has the same effect as setting p1200 = 0.

p1202[0...n] Flying restart search current / FlyRest I_srch

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	10 [%]	400 [%]	100 [%]

Description: Sets the search current for the "flying restart" function.

The value is referred to the motor magnetizing current.

For U/f control, it may be necessary to increase the search current (e.g. 120 %) to ensure reliable flying restart.

Fast flying restart for induction motors with voltage model (see r1780.11):

Sets the initial setpoint for the field-generating current component.

Dependency: Refer to: r0331

Caution: An unfavorable parameter value can result in the motor behaving in an uncontrollable fashion.

Note: In U/f control mode, the parameter serves as a threshold value for establishing the current at the beginning of the flying restart function. When the threshold value is reached, the prevailing search current is set dependent upon the frequency on the basis of voltage inputs.

Reducing the search current can also improve flying restart performance (if the system moment of inertia is not very high, for example).

p1203[0...n] Flying restart search rate factor / FlyRst v_Srch Fact

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10 [%]	4000 [%]	100 [%]

Description: Sets the factor for the search speed for flying restart.

The value influences the rate at which the output frequency is changed during a flying restart . A higher value results in a longer search time.

Recommend.: For encoderless vector control and motor cables longer than 200 m, set the factor p1203 >= 300 %.

Caution: An unfavorable parameter value can result in the motor behaving in an uncontrollable fashion.

For vector control, a value that is too low or too high can cause flying restart to become unstable.

Note: The parameter factory setting is selected so that standard induction motors that are rotating can be found and restarted as quickly as possible (fast flying restart).

With this pre-setting, if the motor is not found (e.g. for motors that are accelerated as a result of active loads or with U/f control and low speeds), we recommend that the search rate is reduced (by increasing p1203).

This parameter is not relevant for a fast flying restart with voltage model (see r1780.11).

r1204.0...15 CO/BO: Flying restart U/f control status / FlyRest Uf st

Note: Re bit 00 ... 09:

Used to control internal sequences during the flying restart.

Depending on the motor type (p0300), the number of active bits differs.

Re bits 10 ... 17:

Are used to monitor the flying restart sequence.

p1206[0...9] Faults without automatic restart / F w/out auto AR

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets faults for which automatic restart should not be effective.

Dependency: The setting is only effective for p1210 = 6, 16.

Refer to: p1210

p1207 BI: AR connection following drive object / AR connection DO

B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Modifies the pre-charging monitoring of the infeed.

The active automatic restart (AR) of the following drive object can be interconnected using this binector input (BI: p1207 = r1214.2).

This means that when the automatic restart is operational, the pre-charging monitoring of the infeed is de-activated and is only re-activated under the following conditions:

- the absolute current in the DC link is greater than 2 % of the maximum current (r0209) of the infeed to provide protection against short-circuit in the DC link.

- if a Voltage Sensing Module (VSM) is being used, the line supply voltage amplitude is greater than 3 % of the parameterized unit supply voltage (p0210) to protect the pre-charging resistors against continuous filter current when the line supply partially returns.

Dependency: Refer to: r0209, p0210, r1214

p1208[0...1] BI: AR modification infeed / AR modification

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to modify the automatic restart (AR).

Interconnections between the automatic restart and infeed:

With the following interconnection in the mode p1210 = 6, the automatic restart can respond to infeed faults:

BI: p1208[0] = r2139.3

With the following interconnection, in the mode p1210 = 4, the automatic restart can respond to line supply failure of the infeed:

BI: p1208[1] = r0863.2

Index: [0] = Infeed fault
[1] = Infeed line supply failure

Dependency: Refer to: r0863, r2139

p1210 Automatic restart mode / AR mode

B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	0

Description: Sets the automatic restart mode (AR).

Value:
0: Inhibit automatic restart
1: Acknowledge all faults without restarting
6: Restart after fault with additional start attempts

Dependency: The automatic restart requires an active ON command (e.g., via a digital input). If, for p1210 > 1, there is no active ON command, then the automatic restart is interrupted.

When using an Advanced Operator Panel (AOP) in the LOCAL Mode, then there is no automatic restart.

Refer to: p0840, p0857, p1267

Danger: If the automatic restart is activated (p1210 > 1) if there is an ON command (refer to p0840), the drive is powered up as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic power-up sequence can only be interrupted by withdrawing the ON command.

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

For p1210 > 1, the infeed is automatically started.

Note: When automatic restart mode is activated, the supply voltage must remain connected (e.g. backed up by UPS).

Re p1210 = 1:

Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgment, then these are also automatically acknowledged again. A minimum time of p1212 + 1 s must expire between a successful fault acknowledgement and a fault re-occurring if the signal ON/OFF1 (STW1.0) is at a HIGH signal level. If the signal ON/OFF1 is at a LOW signal level, then the time between a successful fault acknowledgement and a new fault must be at least 1 s. p1211 has no influence on the number of acknowledgment attempts.

Re p1210 = 6:

An automatic restart is carried out if any fault has occurred.

p1210	Automatic restart mode / AR mode		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	16	0

Description: Sets the automatic restart mode (AR).

Value:
0: Inhibit automatic restart
1: Acknowledge all faults without restarting
4: Restart after line supply failure w/o additional start attempts
6: Restart after fault with additional start attempts
14: Restart after line supply failure following man. acknowledgment
16: Restart after fault following manual acknowledgment

Recommend.: For brief line supply failures, the motor shaft may still be rotating when restarting. The "flying restart" function (p1200) might need to be activated to restart while the motor shaft is still rotating.

Dependency: The automatic restart requires an active ON command (e.g., via a digital input). If, for p1210 > 1, there is no active ON command, then the automatic restart is interrupted.

When using an Operator Panel in the LOCAL mode, then there is no automatic start.

For p1210 = 14, 16, a manual acknowledgement is required for an automatic restart.

Refer to: p0840, p0857, p1267

Danger: If the automatic restart is activated (p1210 > 1) if there is an ON command (refer to p0840), the drive is powered up as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic power-up sequence can only be interrupted by withdrawing the ON command.

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). When faults are present, therefore, the parameter cannot be changed.

For p1210 > 1, the motor is automatically started.

Note: When automatic restart mode is activated, the supply voltage must remain connected (e.g. backed up by UPS).

Re p1210 = 1:

Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgment, then these are also automatically acknowledged again. p1211 has no influence on the number of acknowledgment attempts.

Re p1210 = 4:

An automatic restart is only carried out if fault F30003 occurred at the Motor Module or a 1 signal is present at binector input p1208[1]. If additional faults are present, then these faults are also acknowledged and when successful, starting continues. If the 24 V Control Unit power supply fails, then this is interpreted as a line supply failure.

Re p1210 = 6:

An automatic restart is carried out if any fault has occurred or there is a 1 signal at binector input p1208[0].

Re p1210 = 14:

As for p1210 = 4. However, faults that are present must be manually acknowledged.

Re p1210 = 16:

As for p1210 = 6. However, faults that are present must be manually acknowledged.

p1211	Automatic restart start attempts / AR start attempts		
B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	10	3

Description: Sets the start attempts of the automatic restart function for p1210 = 4, 6.

Dependency: This parameter setting is active for p1210 = 6.

For p1210 = 4, the parameter only has an influence if, when attempting to start, an additional line phase failure (F06200) occurs.

A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Refer to: p1210, r1214

Notice: After fault F07320 occurs, the power-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.

After a complete power failure the start counter always starts with the counter value that applied before the power failure, and decrements this start attempt by 1. If a further attempt to acknowledge is started by the automatic restart function prior to power failure, e.g. when the CU remains active on power failure longer than the time p1212 / 2, the fault counter will already have been decremented once. In this case, the start counter is thus decreased by the value 2.

Note: A start attempt starts immediately when a fault occurs. The restart attempt is considered to have been completed if the infeed is powered up and an additional delay time of 1 s has expired.

As long as a fault is present, an acknowledge command is generated in the time intervals of p1212 / 2. When successfully acknowledged, the start counter is decremented. If, after this, a fault re-occurs before a restart has been completed, then acknowledgement starts again from the beginning.

Fault F07320 is output if, after several faults occur, the number of parameterized start attempts has been reached. After a successful start attempt (i.e. a fault/error has no longer occurred up to the end of the power-up operation) the start counter is again reset to the parameter value after 1 s. If faults re-occur, the parameterized number of start attempts is again available.

At least one start attempt is always carried out.

After a line supply failure, acknowledgement is immediate and when the line supply returns, the system is powered up. If, between successfully acknowledging the line fault and the line supply returning, another fault occurs, then its acknowledgement also causes the start counter to be decremented.

p1211 Automatic restart start attempts / AR start attempts

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3

P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	10	3

Description: Sets the start attempts of the automatic restart function for p1210 = 4, 6.

Dependency: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Refer to: p1210, r1214

Notice: After fault F07320 occurs, the power-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.

After a complete power failure the start counter always starts with the counter value that applied before the power failure, and decrements this start attempt by 1. If a further attempt to acknowledge is started by the automatic restart function prior to power failure, e.g. when the CU remains active on power failure longer than the time p1212 / 2, the fault counter will already have been decremented once. In this case, the start counter is thus decreased by the value 2.

Note: A start attempt starts immediately when a fault occurs. The start attempt is considered to been completed if the motor was magnetized (r0056.4 = 1) and an additional delay time of 1 s has expired.

As long as a fault is present, an acknowledge command is generated in the time intervals of p1212 / 2. When successfully acknowledged, the start counter is decremented. If, after this, a fault re-occurs before a restart has been completed, then acknowledgement starts again from the beginning.

Fault F07320 is output if, after several faults occur, the number of parameterized start attempts has been reached. After a successful start attempt, i.e. a fault/error has no longer occurred up to the end of the magnetizing phase, the start counter is again reset to the parameter value after 1 s. If a fault re-occurs - the parameterized number of start attempts is again available.

At least one start attempt is always carried out.

After a line supply failure, acknowledgement is immediate and when the line supply returns, the system is powered up. If, between successfully acknowledging the line fault and the line supply returning, another fault occurs, then its acknowledgement also causes the start counter to be decremented.

p1212	**Automatic restart delay time start attempts / AR t_wait start**		
B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.1 [s]	1000.0 [s]	1.0 [s]

Description: Sets the delay time up to restart.

Dependency: This parameter setting is active for p1210 = 4, 6.

For p1210 = 1, the following applies:

Only automatic acknowledgment of the faults, no restart.

Refer to: p1210, r1214

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Note: The faults are automatically acknowledged and the system is powered up again after half of the delay time has expired and after the full delay time has expired.

p1212	**Automatic restart delay time start attempts / AR t_wait start**		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.1 [s]	1000.0 [s]	1.0 [s]

Description: Sets the delay time up to restart.

Dependency: This parameter setting is active for p1210 = 4, 6.

For p1210 = 1, the following applies:

Faults are only automatically acknowledged in half of the waiting time, no restart.

Refer to: p1210, r1214

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Note: The faults are automatically acknowledged after half of the delay time has expired and the full delay time.

If the cause of a fault is not removed in the first half of the delay time, then it is no longer possible to acknowledge in the delay time.

p1213[0...1]	**Automatic restart monitoring time / AR t_monit**		
B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [s]	10000.0 [s]	0.0 [s]

Description: Sets the monitoring time of the automatic restart (AR).

Index: [0] = Restart
[1] = Reset start counter

Dependency: Refer to: p1210, r1214

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

After fault F07320 occurs, the power-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.

Note: Re index 0:

The monitoring time starts when the faults are detected. If the automatic acknowledgements are not successful, the monitoring time runs again. If the drive has not restarted at the end of the monitoring time, fault F07320 is signaled.

The monitoring is de-activated with p1213 = 0. If p1213 is set to a value which is lower than in p1212, fault F07320 is generated at each restart. If, for p1210 = 1, the time in p1213 is set lower than in p1212, then fault F07320 is also generated at each restart.

The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowledged (e.g. for faults that are permanently present).

Re index 1:

The start counter (refer to r1214) is only set back to the starting value p1211 if, after successful restart, the time in p1213[1] has expired. The delay time is not effective for fault acknowledgement without automatic restart (p1210 = 1). After a power failure (blackout) the delay time only starts after the line supply returns and the Control Unit boots. The start counter is set to p1211, if F07320 occurred, the power-on command is withdrawn and the fault is acknowledged.

The start counter is immediately updated if the starting value p1211 or the mode p1210 is changed.

p1213[0...1] Automatic restart monitoring time / AR t_monit

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	10000.0 [s]	0.0 [s]

Description: Sets the monitoring time of the automatic restart (AR).

Index:
[0] = Restart
[1] = Reset start counter

Dependency: Refer to: p1210, r1214

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

After fault F07320 occurs, the power-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.

Note: Re index 0:

The monitoring time starts when the faults are detected. If the automatic acknowledgements are not successful, the monitoring time runs again. If, after the monitoring time has expired, the drive has still not successfully started again (flying restart and magnetizing of the motor must have been completed: r0056.4 = 1), then fault F07320 is output.

The monitoring is de-activated with p1213 = 0. If p1213 is set lower than the sum of p1212, the magnetizing time p0346 and the additional delay time due to the flying restart, then fault F07320 is generated at each restart. If, for p1210 = 1, the time in p1213 is set lower than in p1212, then fault F07320 is also generated at each restart.

The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowledged (e.g. for faults that are permanently present).

In the case of p1210 = 14, 16, the faults which are present must be acknowledged manually within the time in p1213[0]. Otherwise, fault F07320 is generated after the set time.

Re index 1:

The start counter (refer to r1214) is only set back to the starting value p1211 if, after successful restart, the time in p1213[1] has expired. The delay time is not effective for fault acknowledgement without automatic restart (p1210 = 1). After a power failure (blackout) the delay time only starts after the line supply returns and the Control Unit boots. The start counter is set to p1211, if F07320 occurred, the power-on command is withdrawn and the fault is acknowledged.

The start counter is immediately updated if the starting value p1211 or the mode p1210 is changed.

r1214.0...15 CO/BO: Automatic restart status / AR status

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of the automatic restart (AR).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Initialization	Yes	No	-
01	Wait for alarm	Yes	No	-
02	Auto restart act	Yes	No	-
03	Setting the acknowledgement command	Yes	No	-
04	Acknowledge alarms	Yes	No	-
05	Restart	Yes	No	-

06	Delay time running after automatic power-up	Yes	No	-
07	Fault	Yes	No	-
10	Effective fault	Yes	No	-
12	Start count. bit 0	ON	OFF	-
13	Start count. bit 1	ON	OFF	-
14	Start count. bit 2	ON	OFF	-
15	Start count. bit 3	ON	OFF	-

Note:

Re bit 00:

State to display the single initialization after POWER ON.

Re bit 01:

State in which the automatic restart function waits for faults (initial state).

Re bit 02:

General display that a fault has been identified and that the restart or acknowledgement has been initiated.

Re bit 03:

Displays the acknowledge command within the "acknowledge alarms" state (bit 4 = 1). For bit 5 = 1 or bit 6 = 1, the acknowledge command is continually displayed.

Re bit 04:

State in which the faults that are present are acknowledged. The state is exited again after successful acknowledgement. A change is only made into the next state if it is signaled that a fault is no longer present after an acknowledgement command (bit 3 = 1).

Re bit 05:

State in which the drive is automatically powered up (only for p1210 = 4, 6).

Re bit 06:

State in which the system waits after having been powered up, to the end of the start attempt.

For p1210 = 1, this signal is directly set after the faults have been successfully acknowledged.

Re bit 07:

State which is assumed after a fault occurs within the automatic restart function.

Re bits 12 ... 15:

Actual state of the start counter (binary coded).

r1214.0...15 CO/BO: Automatic restart status / AR status

State to display the single initialization after POWER ON.

Re bit 01:

State in which the automatic restart function waits for faults (initial state).

Re bit 02:

General display that a fault has been identified and that the restart or acknowledgement has been initiated.

Re bit 03:

Displays the acknowledge command within the "acknowledge alarms" state (bit 4 = 1). For bit 5 = 1 or bit 6 = 1, the acknowledge command is continually displayed.

Re bit 04:

State in which the faults that are present are acknowledged. The state is exited again after successful acknowledgement. A change is only made into the next state if it is signaled that a fault is no longer present after an acknowledgement command (bit 3 = 1).

Re bit 05:

State in which the drive is automatically powered up (only for p1210 = 4, 6).

Re bit 06:

State in which the system waits after having been powered up, to the end of the start attempt (to the end of the magnetizing process).

For p1210 = 1, this signal is directly set after the faults have been successfully acknowledged.

Re bit 07:

State which is assumed after a fault occurs within the automatic restart function. This is only reset after acknowledging the fault and withdrawing the power-on command.

Re bit 10:

When the automatic restart function is active, r1214.7 is displayed, otherwise the active fault r2139.3.

Re bits 12 ... 15:

Actual state of the start counter (binary coded).

p1215 Motor holding brake configuration / Brake config

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 2701, 2707, 2711
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Sets the holding brake configuration.

Value:
0: No motor holding brake available
1: Motor holding brake acc. to sequence control
2: Motor holding brake always open
3: Motor holding brake like sequence control connection via BICO

Dependency: Refer to: p1216, p1217, p1226, p1227, p1228, p1278

Caution: For the setting p1215 = 0, if a brake is used, it remains closed. If the motor moves, this will destroy the brake.

Notice: If p1215 was set to 1 or if p1215 was set to 3, then when the pulses are suppressed, the brake is closed even if the motor is still rotating. Pulse suppression can either be caused by a 0 signal at p0844, p0845 or p0852 or as a result of a fault with OFF2 response. If this is not desirable (e.g. for a flying restart), then the brake can be kept open using a 1 signal at p0855.

Note: If the configuration is set to "no holding brake present" when booting, then the motor holding brake will be automatically identified. If a motor holding brake is detected, the configuration is set to "motor holding brake as for sequence control".

If a motor holding brake is used via the brake connection of the Motor Module integrated in the drive, then it is not permissible that p1215 is set to 3.

if an external motor holding brake is being used, then p1215 should be set to 3 and r0899.12 should be interconnected as control signal.

When the function module "extended brake control" is activated (r0108.14 = 1), r1229.1 should be interconnected as control signal.

The parameter can only be set to zero when the pulses are inhibited.

The parameterization "no motor holding brake available" and "Safe Brake Control" enabled (p1215 = 0, p9602 = 1, p9802 = 1) is not practical if there is no motor holding brake.

The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.

p1216 Motor holding brake opening time / Brake t_open

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2701, 2711
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	10000 [ms]	100 [ms]

Description: Sets the time to open the motor holding brake.

After controlling the holding brake (opens), the speed/velocity setpoint remains at zero for this time. After this, the speed/velocity setpoint is enabled.

Recommend.: This time should be set longer than the actual opening time of the brake. This ensures that the drive cannot accelerate when the brake is applied.

Dependency: Refer to: p1215, p1217

Note: For a motor with DRIVE-CLiQ and integrated brake, for p0300 = 10000, this time is pre-assigned the value saved in the motor.

For p1216 = 0 ms, the monitoring and the message A07931 "Brake does not open" are deactivated.

p1217 Motor holding brake closing time / Brake t_close

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2701, 2711
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	10000 [ms]	100 [ms]

Description: Sets the time to apply the motor holding brake.

After OFF1 or OFF3 and the holding brake is controlled (the brake closes), then the drive remains closed-loop controlled for this time stationary with a speed setpoint/velocity setpoint of zero. The pulses are suppressed when the time expires.

Recommend.: This time should be set longer than the actual closing time of the brake. This ensures that the pulses are only suppressed after the brake has closed.

Dependency: Refer to: p1215, p1216

Notice: If the selected closing time is too short with respect to the actual closing time of the brake, then the load can sag.

If the closing time is selected to be too long with respect to the actual closing time of the brake, the control works against the brake and therefore reduces its lifetime.

Note: For a motor with DRIVE-CLiQ and integrated brake, for p0300 = 10000, this time is pre-assigned the value saved in the motor.

For p1217 = 0 ms, the monitoring and the message A07932 "Brake does not close" are deactivated.

p1218[0...1] BI: Open motor holding brake / Open brake

VECTOR_G (Ext brake)

	Min	**Max**	**Factory setting**
	0.00 [%]	200.00 [%]	0.00 [%]

Description: Sets the threshold value for the command "open brake".

Dependency: Refer to: p1220, r1229, p1277

p1222	BI: Motor holding brake feedback signal brake closed / Brake feedb closed		
VECTOR_G (Ext brake)	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2711
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the feedback signal "brake closed".
For motor holding brakes with feedback signal, the signal "brake closed" can be activated using p1275.5 = 1.

Dependency: Refer to: p1223, p1275

Note: 1 signal: Brake closed.

When braking with 1 feedback signal, the inverted feedback signal is connected to the BICO input for the second feedback signal (p1223).

For r1229.5 = 1, OFF1/OFF3 are suppressed to prevent the drive accelerating by a load that drives the motor - whereby OFF2 remains effective.

p1223 BI: Motor holding brake feedback signal brake open / Brake feedb open

VECTOR_G (Ext brake)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2711
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the feedback signal "brake open".

For motor holding brakes with feedback signal, the signal "brake open" can be activated using p1275.5 = 1.

Dependency: Refer to: p1222, p1275

Note: 1 signal: Brake open.

When braking with 1 feedback signal, the inverted feedback signal is connected to the BICO input for the second feedback signal (p1222).

p1224[0...3] BI: Close motor holding brake at standstill / Brk close standst

VECTOR_G (Ext brake)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2704
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for close brake at standstill.

Dependency: Refer to: p1275

Note: [0]: Signal, close brake at standstill, inversion via p1275.2

[1]: Signal, close brake at standstill, inversion via p1275.3

[2]: Signal, close brake at standstill

[3]: Signal, close brake at standstill

These four signals form an OR logic operation.

p1225 CI: Standstill detection threshold value / Standstill thresh

VECTOR_G (Ext brake)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2704
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	63[0]

Description: Sets the signal source "threshold value" for the standstill identification.

Dependency: Refer to: p1226, p1228, r1229

p1226[0...n] Threshold for zero speed detection / n_standst n_thresh

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 2701, 2704
P-Group: Functions	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	20.00 [rpm]

Description: Sets the speed threshold for the standstill identification.

Acts on the actual value and setpoint monitoring.

When braking with OFF1 or OFF3, when the threshold is undershot, standstill is identified.

The following applies when the brake control is activated:

When the threshold is undershot, the brake control is started and the system waits for the brake closing time in p1217. The pulses are then suppressed.

if the brake control is not activated, the following applies:

When the threshold is undershot, the pulses are suppressed and the drive coasts down.

Dependency: Refer to: p1215, p1216, p1217, p1227

Notice: For reasons relating to the compatibility to earlier firmware versions, a parameter value of zero in indices 1 to 31 is overwritten with the parameter value in index 0 when the Control Unit boots.

Note: Standstill is identified in the following cases:

- the speed actual value falls below the speed threshold in p1226 and the time started after this in p1228 has expired.
- the speed setpoint falls below the speed threshold in p1226 and the time started after this in p1227 has expired.

The actual value sensing is subject to measuring noise. For this reason, standstill cannot be detected if the speed threshold is too low.

p1227 Zero speed detection monitoring time / n_standst t_monit

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2701, 2704
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	300.000 [s]	4.000 [s]

Description: Sets the monitoring time for the standstill identification.

When braking with OFF1 or OFF3, standstill is identified after this time has expired, after the setpoint speed has fallen below p1226 (also refer to p1145).

After this, the brake control is started, the system waits for the closing time in p1217 and then the pulses are suppressed.

Dependency: Refer to: p1215, p1216, p1217, p1226

Notice: For p1145 > 0.0 (RFG tracking) the setpoint is not equal to zero dependent on the selected value. This can therefore cause the monitoring time in p1227 to be exceeded. In this case, for a driven motor, the pulses are not suppressed.

Note: Standstill is identified in the following cases:

- the speed actual value falls below the speed threshold in p1226 and the time started after this in p1228 has expired.
- the speed setpoint falls below the speed threshold in p1226 and the time started after this in p1227 has expired.

For p1227 = 300.000 s, the following applies:

Monitoring is de-activated.

For p1227 = 0.000 s, the following applies:

With OFF1 or OFF3 and a ramp-down time = 0, the pulses are immediately suppressed and the motor "coasts" down.

p1228 Pulse suppression delay time / Pulse suppr t_del

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2701, 2704
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	299.000 [s]	0.000 [s]

Description: Sets the delay time for pulse suppression.

After OFF1 or OFF3, the pulses are canceled, if at least one of the following conditions is fulfilled:

- the speed actual value falls below the threshold in p1226 and the time started after this in p1228 has expired.
- the speed setpoint falls below the threshold in p1226 and the time started after this in p1227 has expired.

Dependency: Refer to: p1226, p1227

Notice: When the motor holding brake is activated, pulse cancellation is additionally delayed by the brake closing time (p1217).

r1229.1...11 CO/BO: Motor holding brake status word / Brake ZSW

Description: Sets the signal source to activate the armature short-circuit or DC braking.

Dependency: Refer to: p1231, p1232, p1233, p1234, p1235, p1236, p1237, r1238, r1239, p1345, p1346

Note: 1 signal: Armature short-circuit/DC braking activated.

0 signal: Armature short-circuit/DC braking de-activated.

p1231[0...n] Armature short-circuit / DC braking configuration / ASC/DCBRK config

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** 7014, 7016, 7017
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	14	0

Description: Setting to activate the various types for armature short-circuit / DC braking.

Value:
0: No function
1: External armature short-circuit with contactor feedback signal
2: Ext. armature short circuit without contactor feedback signal
3: Internal voltage protection
4: Internal armature short-circuit / DC braking
5: DC braking for OFF1/OFF3
14: DC braking below starting speed

Dependency: Refer to: p0300, p1230, p1232, p1233, p1234, p1235, p1236, p1237, r1238, r1239, p1345, p1346

Danger: ⚠

Re p1231 = 1, 2:

- only short-circuit-proof motors may be used, or suitable resistors must be used to short-circuit the motor

Re p1231 = 3:

- when the internal voltage protection is active, after pulse suppression, all of the motor terminals are at half of the DC link voltage (without an internal voltage protection, the motor terminals are at zero potential)!

- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).

- The Motor Module must be able to conduct 180% short-circuit current (r0320) of the motor (r0209).

- the internal voltage protection cannot be interrupted due to a fault response. If an overcurrent condition occurs during the active, internal voltage protection, then this can destroy the Motor Module and/or the motor.

- if the Motor Module does not support the autonomous, internal voltage protection (r0192.10 = 0), in order to ensure safe, reliable functioning when the line supply fails, an external 24 V power supply (UPS) must be used for the components.

- if the Motor Module does support the autonomous, internal voltage protection (r0192.10 = 1), in order to ensure safe, reliable functioning when the line supply fails, the 24 V power supply for the components must be provided through a Control Supply Module.

- if the internal voltage protection is active, it is not permissible that the motor is driven by the load for a longer period of time (e.g. as a result of loads that move the motor or another coupled motor).

Re p1231 = 4 and synchronous motor:

- when armature short-circuit is active, all of the motor terminals are at half of the DC link potential.

- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).

- The Motor Module must be able to conduct 180% short-circuit current (r0320) of the motor (r0209).

Note:

Re p1231 = 1, 2:

The external armature short circuit can only be selected for synchronous motors (p0300). In this case, control bit BO: r1239.0 must be interconnected (e.g. to a digital input) to control the external contactor.

The external armature short circuit cannot be set as a fault response. It can be triggered via binector input p1230. It is also always activated in the case of pulse suppression.

Re p1231 = 3:

Internal voltage protection (using an internal armature short circuit) can only be selected for synchronous motors (p0300) and Motor Modules in booksize or chassis format. Further, it is not permissible for Safety Integrated to be active on blocksize Motor Modules (i.e. p9501 = 0 and p9601 = 0). The internal voltage protection prevents the DC link capacitance from being charged if there is no possibility of regenerating the EMF of a motor operated in the field-weakening mode. The Motor Module must support this function (r0192.9 = 1).

a) If the Motor Module does not support the autonomous, internal armature short-circuit (r0192.10 = 0), the armature short-circuit is activated as soon as the activation criterion is fulfilled (refer below):

b) If the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1), then the Motor Module itself decides - using the DC link voltage - as to whether the short-circuit should be activated. In this case, protection is also provided even if the DRIVE-CLiQ connection between the Control Unit and Motor Module was interrupted. The short circuit is activated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the short-circuit is withdrawn. This therefore ensures that the required input voltage for the Control Supply Module is maintained.

For chassis units, the following applies:

The value for the voltage limits is calculated, depending on the voltage class, from EEPROM data of the particular power unit and a factor.

Re p1231 = 4:

The function is activated as soon as the activation criterion is fulfilled.

- the function can be superseded by OFF2

a) For synchronous motors (p0300 = 2xx, 4xx), the internal armature short-circuit is initiated.

- the Motor Module must support this function (r0192.9 = 1).

b) For induction motors (p0300 = 1xx), the DC braking is initiated.

Activation criterion (one of the following criteria is fulfilled):

- binector input p1230 = 1 signal (DC braking activation).

- the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610).

- the internal pulse enable is missing (r0046.19 = 0).

Re p1231 = 5:

DC braking can only be set for induction motors.

DC braking is activated if the OFF1 or OFF3 command is present. Binector input p1230 is ineffective. If the drive speed still lies above the speed threshold p1234, then initially, the drive is ramped-down to this threshold, demagnetized (see p0347) and is then switched into DC braking for the time set in p1233. After this, the drive is switched-off. If, at OFF1/OFF3, the drive speed is below p1234, then it is immediately demagnetized and switched into DC braking. A change is made into normal operation if the OFF1 command is withdrawn prematurely.

DC braking by means of fault response continues to be possible.

Re p1231 = 14:

DC braking can only be set for induction motors.

DC braking is initiated if binector input p1230 = 1 during operation and the actual speed is below the starting speed p1234 (before this, the drive must have operated above p1234 plus the hysteresis). Then, following upstream demagnetization (see p0347), the braking current p1232 is injected for the time set in p1233. The drive then changes into normal operation. During braking the command for DC braking can be withdrawn. If the time p1233 is exceeded, then DC braking is inhibited and the drive changes into normal operation.

For OFF1 and OFF3, DC braking is only executed, if binector input p1230 = 1 signal.

DC braking by means of fault response continues to be possible.

For operation with an encoder, the encoder signal may not exceed a ripple of 15 rpm in the range of p1234.

Re p1231 = 3, 4, 5, 14:

The value can only be changed to values not equal to 3, 4, 5 or 14 if p0491 is not equal to 4 and p2101 is not equal to 6 (armature short-circuit/DC braking not set).

Note:

ASC: Armature Short Circuit

CSM: Control Supply Module

DCBRK: DC Braking

IVP: Internal Voltage Protection

UPS: Uninterruptible Power Supply

p1232[0...n] DC braking braking current / DCBRK I_brake

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 7017
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the braking current for DC braking.

Dependency: Refer to: p1230, p1231, p1233, p1234, r1239, p1345, p1346

Note: A change to the braking current becomes effective the next time that DC braking is switched on.

The value for p1232 is specified as an rms value in the 3-phase system. The magnitude of the braking current is the same as that of an identical output current at frequency zero (see r0067, r0068, p0640). The braking current is internally limited to r0067.

For the current controller, the settings of parameters p1345 and p1346 (I_max limiting controller) are used.

p1233[0...n] DC braking time / DCBRK time

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 7017
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [s]	3600.0 [s]	1.0 [s]

Description: Sets the DC braking time (as fault response).

Dependency: Refer to: p1230, p1231, p1232, p1234, r1239

Note: The time set is also effective when parameterizing DC braking as fault response.

If a speed encoder is being used, DC braking is ended as soon as the drive falls below the standstill threshold (p1226).

p1234[0...n]	Speed at the start of DC braking / DCBRK n_start		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 7017
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rpm]	210000.00 [rpm]	40000.00 [rpm]

Description: Sets the starting speed for DC braking.

If the actual speed falls below this threshold, then DC braking is activated.

Dependency: Refer to: p1230, p1231, p1232, p1233, r1239

Notice: If an encoder fault occurs during closed-loop operation with an encoder, controlled deceleration of the drive down to the start speed p1234 is no longer possible. In this case, DC braking is activated immediately and injects the braking current p1232 for the braking time p1233 after de-magnetizing. The braking current and braking duration must, therefore, be dimensioned accordingly for this situation so that the drive can be decelerated to standstill.

In the case of operation with an encoder, this speed may not be set too low so as ensure that the oscillation movement induced by the residual flux/remanence of the motor does not cause DC braking to be de-activated again.

Note: Function p1231 = 14 is activated at 15 1/min higher than the value set in p1234. This hysteresis is required to prevent DC braking from being deactivated for speed encoder signals with ripple.

p1235[0...n]	BI: External armature short-circuit contactor feedback signal / ASC ext feedback		
VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** -

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the contactor feedback signal for external armature short-circuit.

Dependency: Refer to: p1230, p1231, p1236, p1237, r1239

Notice: In order that the pulses are not enabled when the contactor is closed, the contactor feedback signal must lag by a sufficiently long time when opening the contactor.

Note: 1 signal: The contactor is closed.

0 signal: The contactor is open.

p1236[0...n]	Ext. armature short-cct. contactor feedback signal monit. time / ASC ext t_monit		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	1000 [ms]	200 [ms]

Description: Sets the monitoring time of the contactor feedback signal for the external armature short-circuit configuration.

If the contactor feedback signal (p1235) is parameterized, then the appropriate feedback signal (r1239.1) is expected within this monitoring time after either opening or closing the contactor.

Dependency: Refer to: p1230, p1231, p1235, p1237, r1239

p1237[0...n]	External armature short-circuit delay time when opening / ASC ext t_wait		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	1000 [ms]	200 [ms]

Description: Sets the delay time when opening the contactor of the external armature short-circuit.

If no contactor feedback signal has been selected (p1235), then the system waits for this time before the pulses are switched in.

Dependency: Refer to: p1230, p1231, p1235, p1236, r1239

Notice: This delay time must be at least long enough so that the contactor contacts reliably open before the pulses are switched in. The delay time must be greater than the contactor response time. The Motor Module can be damaged if the delay time is too short.

r1238 CO: Armature short-circuit external state / EASC state

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 2610
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: ASM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	-

Description: Displays the state for the external armature short-circuit.

Value:
0: Switched off
1: Ready
2: Active
3: Active - feedback signal "Closed" OK
4: Active - feedback signal "Closed" missing
5: Prompt to remove the armature short-circuit
6: Active - feedback signal "Open" missing

Dependency: Refer to: p1230, p1231, p1235, p1236, p1237, r1239

Note: Activation criterion (one of the following criteria is fulfilled):

- the signal at BI: p1230 (armature short-circuit activation) is 0.

- the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610).

- the internal pulse enable is missing (r0046.19 = 0).

Re state "switched out" (r1238 = 0):

- the external armature short-circuit can be selected with p1231 = 1.

Re state "ready" (r1238 = 1):

- as soon as the activation criterion is fulfilled, then a transition is made into the state "active" (r1238 = 2).

Regarding the state "active" (r1238 = 2), "active - feedback signal "Closed" OK" (r1238 = 3)", "active - feedback signal "Closed" missing" (r1238 = 4)":

- the control signal to close contactor r1239.0 is set to "1" (closed) and the pulses are suppressed.

- if a contactor feedback signal is not connected (BI: p1235 = 0 signal), then a transition is immediately made into state 3.

- if a contactor feedback signal is connected, then a transition is made into state 3 if the feedback signal at BI: p1235 goes to "1" (closed) within the monitoring time (p1236).

- otherwise, a transition is made into state 4.

Re state "prompt to remove the armature short-circuit" (r1238 = 5):

- the activation criterion is no longer fulfilled. An attempt is made to again remove the armature short circuit.

- the control signal to close the contactor r1239.0 is set to "0" (open) and the pulses remain suppressed.

- if a contactor feedback signal is not connected (BI: p1235 = 0 signal), the system waits for the delay time (p1237) to expire until a transition is made into state 1.

- if a contactor feedback signal is connected, the system waits until the feedback signal at BI:p1235 goes to "0" (open) until a transition is made into state 1. If this does not occur within the monitoring time (p1236), then a transition is made into state 6.

Re state "active - feedback signal "Open" missing" (r1238 = 6):

- this error state can be exited by de-selecting the external armature short-circuit (p1231 = 0).

r1239.0...13 CO/BO: Armature short-circuit / DC braking status word / ASC/DCBRK ZSW

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the status word for armature short-circuit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	External armature short-circuit	Active	Inactive	-
01	External armature short-circuit contactor feedback signal	Closed	Open	-
02	External armature short-circuit ready	Yes	No	-
03	External armature short-circuit with contactor feedback signal	Yes	No	-
04	Internal armature short-circuit	Active	Inactive	-
05	Internal armature short circuit feedback signal from power unit	Active	Inactive	-
06	Internal armature short-circuit ready	Yes	No	-
08	DC braking active	Yes	No	7017
09	DC current injection active	Yes	No	-
10	DC braking ready	Yes	No	7017
11	Armature short circuit/DC braking selected	Yes	No	-
12	DC braking selection internally inhibited	Yes	No	-
13	DC braking for OFF1/OFF3	Yes	No	-

Dependency: Refer to: p1230, p1231, p1232, p1233, p1234, p1235, p1236, p1237

Note: External armature short-circuit (bits 0 ... 3):

Re bit 00:

Using this signal, the motor is short-circuited through an external contactor circuit. This means that this BO: p1239.0 must be interconnected e.g. to a digital output.

Re bit 01:

This signal indicates the state of the contactor to establish the armature short-circuit. To do this, BI: p1235 must be interconnected to a digital input.

Re bit 02:

The external armature short-circuit configuration is ready and is activated as soon as the activation criterion is fulfilled.

Re bit 03:

1: A feedback signal from an external contactor was parameterized in BI: p1235.

Internal voltage protection / internal armature short-circuit (bits 4 ... 6):

Re bit 04:

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module does not support the autonomous internal voltage protection (r0192.10 = 0).

The Control Unit issues the command to the Motor Module to short-circuit the motor through the power semiconductors.

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1).

The Motor Module decides autonomously whether the armature short-circuit is activated. In this case, the following applies: r1239.4 = r1239.5.

c) Internal armature short-circuit (p1231 = 4) was selected.

The Control Unit issues the command to the Motor Module to short-circuit the motor through the power semiconductors.

Re bit 05:

The Motor Module signals that the motor is short-circuited in the Motor Module through the power semiconductors.

Re bit 06:

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module does not support the autonomous internal voltage protection (r0192.10 = 0).

The internal voltage protection is ready and is activated as soon as the activation criterion is fulfilled.

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1).

The internal voltage protection is ready and the Motor Module decides autonomously - using the DC link voltage - whether the short-circuit is activated. In this case, protection is also provided even if the DRIVE-CLiQ connection between the Control Unit and Motor Module was interrupted. The short-circuit is activated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the short-circuit is withdrawn.

c) Internal armature short-circuit (p1231 = 4) was selected.

The internal armature short-circuit is ready and is activated as soon as the activation criterion is fulfilled.

Activation criterion (one of the following criteria is fulfilled):

- the signal at BI: p1230 (armature short-circuit activation) is 1.

- the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610).

- the internal pulse enable is missing (r0046.19 = 0).

Re bit 12, 13:

Only effective for p1231 = 14.

p1240[0...n] Vdc controller or Vdc monitoring configuration / Vdc ctrl config

VECTOR_G (n/M)			
	Can be changed: U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	6	1

Description: Sets the controller configuration of the DC link voltage (Vdc controller) in the closed-loop control mode.

Value:
0: Inhib Vdc ctrl
1: Enable Vdc_max controller
2: Enable Vdc_min controller (kinetic buffering)
3: Enable Vdc_min controller and Vdc_max controller
4: Activate Vdc_max monitoring
5: Activate Vdc_min monitoring
6: Activate Vdc_min monitoring and Vdc_max monitoring

Dependency: Refer to: p1245

Warning: When the Vdc_max controller is active, the motor can be accelerated (e.g. by driving loads or as a result of high DC link voltages). This can be caused by other drives that are operating on a common DC link busbar.

Caution: If several drives are operated from the same DC link busbar, then it is recommended that the Udc control is only activated for the drives with high moments of inertia. If the Udc controls for various drives are simultaneously active, then they can mutually influence one another. In this case, the controller dynamic performance should be reduced or the Udc control of individual drives should be deactivated.

Drives with Udc control must be able to brake and accelerate independently of one another.

Notice: An excessively high value in p1245 can possibly negatively influence the normal operation of the drive.

Note: p1240 = 1, 3:

When the DC link voltage limit specified for the Motor Module is reached the following applies:

- the Vdc_max controller limits the regenerative energy in order that the DC link voltage is kept below the maximum DC link voltage when braking.

- the ramp-down times are automatically increased.

p1240 = 2, 3:

When the switch-in threshold of the Vdc_min controller is reached (p1245), the following applies:

- the Vdc_min controller limits the energy taken from the DC link in order to keep the DC link voltage above the minimum DC link voltage when accelerating.

- the motor is braked in order to use its kinetic energy to buffer the DC link.

p1240 = 4, 5, 6:

When the threshold in r1242 or r1246 is reached, the DC link voltage monitoring initiates a fault (F07403 or F07404) with a response and therefore reduces additional negative effects on the DC link voltage.

If a braking resistor is connected to the DC link, then the Vdc_max control should be disabled (also see p1531).

r1242 Vdc_max controller switch-in level / Vdc_max on_level

VECTOR_G (n/M)			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_max controller.

If p1254 = 0 (automatic sensing of the switch-in level = off), then the following applies:

AC/AC device: r1242 = 1.15 * sqrt(2) * p0210

DC/AC device: r1242 = 1.15 * p0210

If p1254 = 1 (automatic sensing of the switch-in level = on), then the following applies:

r1242 = Vdc_max - 50.0 V (Vdc_max: Overvoltage threshold of the power unit)

r1242 = Vdc_max - 25.0 V (for 230 V power units)

Notice: If the activation level of the Vdc_max controller is already exceeded in the deactivated state (pulse inhibit) by the DC link voltage, then the controller can be automatically deactivated (see F07401), so that the drive is not accelerated the next time that it is activated.

Note: The Vdc_max controller is not switched back off until the DC-link voltage falls below the threshold 0.95 * r1242 and the controller output is zero.

p1243[0...n] Vdc_max controller dynamic factor / Vdc_max dyn_factor

VECTOR_G (n/M)			
	Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the DC link voltage controller (Vdc_max controller).

100% means that p1250, p1251, and p1252 (gain, integral time, and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.

If subsequent optimization is required, this can be carried out using the dynamic factor. In this case p1250, p1251, p1252 are weighted with the dynamic factor p1243.

If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.

Note: The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.

p1245[0...n] Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level

VECTOR_G (n/M)			
	Can be changed: U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	65 [%]	150 [%]	76 [%]

Description: Sets the switch-in level for the Vdc-min controller (kinetic buffering).

The value is obtained as follows:

AC/AC device: r1246[V] = p1245[%] * sqrt(2) * p0210

DC/AC device: r1246[V] = p1245[%] * p0210

Dependency: Refer to: p0210

Warning: An excessively high value may adversely affect normal drive operation.

The values up to 150 % are intended for operating modes p1240 = 5, 6.

Note: For SINAMICS GM/SM, the following applies:
Minimum value = 0.75, Maximum value = 0.90

r1246 Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level

VECTOR_G (n/M)			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_min controller (kinetic buffering).

Note: The Vdc_min controller is not switched back off until the DC-link voltage rises above the threshold 1.05 * p1246 and the controller output is zero.

p1247[0...n] Vdc_min controller dynamic factor (kinetic buffering) / Vdc_min dyn_factor

VECTOR_G (n/M)			
	Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the Vdc_min controller (kinetic buffering).

100% means that p1250, p1251, and p1252 (gain, integral time, and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.

If subsequent optimization is required, this can be carried out using the dynamic factor. In this case p1250, p1251, p1252 are weighted with the dynamic factor p1247.

If several components are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the component involved.

p1249[0...n] Vdc_max controller speed threshold / Vdc_max n_thresh

VECTOR_G (n/M)			
	Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rpm]	210000.00 [rpm]	10.00 [rpm]

Description: Sets the lower speed threshold for the Vdc_max controller.

When this speed threshold is undershot, the Vdc_max control is switched out and the speed is controlled using the ramp-function generator.

Note: For fast braking where the ramp-function generator tracking was active, it is possible to prevent the drive rotating in the opposite direction by increasing the speed threshold and setting a final rounding-off time in the ramp-function generator (p1131). This is supported using a dynamic setting of the speed controller.

p1250[0...n] Vdc controller proportional gain / Vdc_ctrl Kp

VECTOR_G (n/M)			
	Can be changed: U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00	100.00	1.00

Description: Sets the proportional gain for the DC-link voltage controller (Vdc_min controller, Vdc_max controller).

Dependency: The effective proportional gain is obtained taking into account p1243 (Vdc_max controller dynamic factor).

Note: The gain factor is proportional to the capacitance of the DC link. The parameter is pre-set to a value that is optimally adapted to the capacitance of the individual Motor Module. The capacitances of the other power units, which are connected to the DC link, can be taken into account using the dynamic factor (p1247 or p1243).

p1251[0...n] Vdc controller integral time / Vdc_ctrl Tn

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6220
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	10000 [ms]	0 [ms]

Description: Sets the integral time for the DC-link voltage controller (Vdc_min controller, Vdc_max controller).

Dependency: The effective integral time is obtained taking into account p1243 (Vdc_max controller dynamic factor).

Note: An integral time is normally not required for single axis drives. For multi-axis drives on the other hand, it may be possible to compensate for interference from other axes using the integral time (integral component) .

p1251 = 0: The integral component is de-activated.

p1252[0...n] Vdc controller rate time / Vdc_ctrl t_rate

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6220
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	1000 [ms]	0 [ms]

Description: Sets the rate time constant for the DC-link voltage controller (Vdc_min controller, Vdc_max controller).

Dependency: The effective rate time is obtained taking into account p1243 (Vdc_max controller dynamic factor).

p1254 Vdc_max controller automatic ON level detection / Vdc_max SenseOnLev

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	1

Description: Activates/de-activates the automatic sensing of the switch-in level for the Vdc_max controller.

Value:
0: Automatic detection inhibited
1: Automatic detection enabled

p1255[0...n] Vdc_min controller time threshold / Vdc_min t_thresh

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	10000.000 [s]	0.000 [s]

Description: Sets the time threshold for the Vdc_min controller (kinetic buffering).

If this value is exceeded a fault is output; the required response can be parameterized.

Prerequisite: p1256 = 1

Notice: If a time threshold has been parameterized, the Vdc_max controller should also be activated (p1240 = 3) so that the drive does not shut down with overvoltage when Vdc_min control is exited (due to the time violation) and in the event of fault response OFF3. It is also possible to increase the OFF3 ramp-down time p1135.

p1256[0...n]	Vdc_min controller response (kinetic buffering) / Vdc_min response		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Sets the response for the Vdc_min controller (kinetic buffering).

Value:
0: Buffer Vdc until undervoltage, n<p1257 -> F07405
1: Buff. Vdc until undervolt., n<p1257 -> F07405, t>p1255 -> F07406

p1257[0...n]	Vdc_min controller speed threshold / Vdc_min n_thresh		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rpm]	210000.00 [rpm]	50.00 [rpm]

Description: Sets the speed threshold for the Vdc-min controller (kinetic buffering).

If this value is exceeded a fault is output; the required response can be parameterized .

Kinetic buffering is not started below the speed threshold.

Note: Exiting the Vdc_min control before reaching motor standstill prevents the regenerative braking current from increasing significantly at low speeds, and after a pulse inhibit, means that the motor coasts down.

However, the maximum braking torque can be set via the appropriate torque limiting.

r1258	CO: Vdc controller output / Vdc_ctrl output		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6220
	P-Group: Functions	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the actual output of the Vdc controller (DC link voltage controller)

Note: The regenerative power limit p1531 is used for vector control to pre-control the Vdc_max controller. The lower the power limit is set, the lower the correction signals of the controller when the voltage limit is reached.

p1260	Bypass configuration / Bypass config		
VECTOR_G (Tech_ctrl)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	3	0

Description: Sets the configuration for the bypass function.

Value:
0: Bypass de-activated
1: Bypass with synchronization and overlap
2: Bypass with synchronization without overlap
3: Bypass without synchronization

Note: If the bypass function is selected ((p1260 > 0), then when the power unit restarts after POWER OFF, the state of the bypass switch is evaluated. This means that after the ramp-up, it is possible to directly change into the standby mode. This is only possible for p1267 = 1 (bypass using the control signal) and if the control command after the system has been booted is still available (p1266). This function has a higher priority than the automatic restart function (p1210).

The "bypass" function can only be switched off again (p1260 = 0) if the bypass is not active or the bypass function has a fault.

The corresponding function should be activated in p3800 for bypass with synchronization.

r1261.0...11 CO/BO: Bypass control/status word / Bypass STW / ZSW

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Control and feedback signals of the bypass switch.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Command switch motor - power unit	Close	Open	-
01	Command switch motor - line supply	Close	Open	-
02	Synchronization requested	Yes	No	-
03	Staging status	Active	Not active	-
05	Feedback signal switch motor - power unit	Closed	Opened	-
06	Feedback signal switch motor - line supply	Closed	Opened	-
07	Bypass command (from p1266)	Yes	No	-
08	Feedback signal synchronization completed (from p1268)	Yes	No	-
09	Staging requested (from p2369)	Yes	No	-
10	Bypass in process sequence	Yes	No	-
11	Bypass enabled	Yes	No	-

Dependency: Refer to: p2369

Note: Control bits 0 and 1 should be interconnected to the signal outputs via which the switches in the motor feeder cables should be controlled. These should be selected/dimensioned for switching under load.

p1262[0...n] Bypass dead time / Bypass t_dead

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	20.000 [s]	1.000 [s]

Description: Sets the dead time for non-synchronized bypass.

Note: This parameter is used to define the changeover time of the contactors. It should not be shorter than the de-magnetizing time of the motor (p0347).

The total changeover time for the bypass is based on the total of p1262 plus the OFF time for the relevant switch (p1274[x]).

p1263 Debypass delay time / Debypass t_del

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	300.000 [s]	1.000 [s]

Description: Sets the delay time to switch back to converter operation for a non-synchronized bypass.

p1264 Bypass delay time / Bypass t_del

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	300.000 [s]	1.000 [s]

Description: Sets the delay time for switching to line operation for a non-synchronized bypass.

p1265 Bypass speed threshold / Bypass n_thresh

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	1480.00 [rpm]

Description: Sets the speed threshold to activate the bypass.

Note: When selecting p1260 = 3 and p1267.1 = 1, the bypass is automatically activated when this speed is reached.

p1266 BI: Bypass control command / Bypass command

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the control command to the bypass.

p1267 Bypass changeover source configuration / Chngov_src config

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the cause that should initiate the bypass.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Bypass via signal (BI: p1266)	Yes	No	-
01	Bypass via reaching the speed threshold	Yes	No	-

Note: The parameter only has an effect for a non-synchronized bypass.

p1267.0 = 1:

The bypass is initiated by setting a binary signal. When the command is reset, after the debypass delay time (p1263) has expired, operation at the power unit is re-selected.

p1267.1 = 1:

When the speed threshold entered in p1265 is reached, the bypass is switched in. The system only switches back when the speed setpoint again falls below the threshold value.

p1268 — BI: Bypass feedback synchronization completed / FS sync compl

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	3819.2

Description: Sets the signal source for the feedback signal "synchronization completed" for the bypass function.

Dependency: Refer to: r3819

p1269[0...1] — BI: Bypass switch feedback signal / Bypass FS

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the feedback signal of the bypass switch.

Index:
[0] = Switch motor/drive
[1] = Switch motor/line supply

Note: In the case of switches without a feedback signal, interconnect the corresponding control bit as the signal source:

BI: p1269[0] = r1261.0

BI: p1269[1] = r1261.1

p1271[0...n] — Flying restart maximum frequency for the inhibited direction / FlyRes f_max dir

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [Hz]	650 [Hz]	0 [Hz]

Description: Sets the maximum search frequency for a flying restart in an inhibited setpoint direction (p1110, p1111).

Note: The parameter has no effect for an operating mode, which only searches in the setpoint direction (p1200 > 3).

p1272 — Simulation mode / Simulation mode

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: In the simulation mode, the closed-loop control or U/f control can be operated without motor.

The simulation mode is used to test the power unit. Even though the DC link voltage is missing, the pulses are enabled when powering up. The DC link pre-charging is bypassed and the undervoltage detection is disabled.

Closed-loop speed control with an encoder is possible if the torque setpoint (r0079) is used in order to operate a second drive in the closed-loop torque controlled mode.

Value:
0: OFF
1: ON

Dependency: The following functions are de-activated in the simulation mode:

- motor data identification routine
- motor data identification routine, rotating without encoder
- pole position identification

For U/f control and sensorless vector control, flying restart is not carried out (refer to p1200).

Refer to: r0192, p1900, p1910, p1960, p1990

Notice: In simulation mode, binector output r0863.1 = 1 is set. This is why you need to check whether other devices are powered up via this signal before activating simulation mode. You might need to disconnect the corresponding BICO interconnection temporarily.

Note: Simulation mode is only possible for DC link voltages below 40 V. In order that the closed-loop control can be calculated, the displayed DC link voltage (r0026, r0070) is set to the rated DC link voltage (refer to p0210). Closed-loop current control and motor model are switched out (disabled) - the same is true for the speed controller for encoderless closed-loop speed control.

When fault messages occur, the parameter is not automatically reset. This function is not implemented for SINAMICS GM.

p1274[0...1] Bypass switch monitoring time / Switch t_monit

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	5000 [ms]	1000 [ms]

Description: Sets the monitoring time for the bypass switch.

Index:
[0] = Switch motor/drive
[1] = Switch motor/line supply

Note: The monitoring is de-activated with p1274 = 0 ms.

The changeover time for the bypass (p1262) is extended by the value in this parameter.

p1275 Motor holding brake control word / Brake STW

VECTOR_G (Ext brake)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 bin

Description: Sets the control word for the motor holding brake.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Inversion BI: 1219[0]	Yes	No	2707
01	Inversion BI: 1219[1]	Yes	No	2707
02	Inversion BI: 1224[0]	Yes	No	2704
03	Inversion BI: 1224[1]	Yes	No	2704
05	Brake with feedback	Yes	No	2711
06	Enable with feedback signal	Yes	No	2711

Note: For p1275.6 = 1 and p1275.5 = 1, the following applies:

The pulse enable (BO: r1229.3) and the setpoint enable (BO: r0899.15) are independent of the timer that has been set (p1217, p1216). The particular enable is only defined by the feedback signal (BI: p1222, BI: p1223). The timers (p1216, p1217) only influence the alarm A07931 "Brake does not open" and A07932 "Brake does not close".

p1276 Motor holding brake standstill detection bypass / Brk standst bypass

VECTOR_G (Ext brake)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2704
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	300.000 [s]	300.000 [s]

Description: Sets the delay time for closing the brake at standstill.

After this time has expired, if the "close brake at standstill" or OFF1/OFF3 is present, the brake is closed and the pulses are suppressed.

For p1276 = 300.000 s, the timer is de-activated - this means that the timer output is always zero.

p1277 Motor holding brake braking threshold delay exceeded / Del thresh exceed

VECTOR_G (Ext brake)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2707
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	300.000 [s]	0.000 [s]

Description: Sets the delay time for the signal "braking threshold exceeded" (BO: r1229.6).

Dependency: Refer to: p1220, p1221, r1229

p1278 Brake control diagnostics evaluation / Brake diagnostics

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the brake control type (with or without diagnostics evaluation).

Example for brake control with diagnostics evaluation.

- brake control in the Motor Modules in booksize format
- Safe Brake Relay for AC Drive

Example for brake control without diagnostics evaluation.

- Brake Relay for AC Drive

Value:

0: Brake control with diagnostics evaluation
1: Brake control without diagnostics evaluation

Note: If the configuration of the motor holding brake (p1215) is set to "no holding brake present" when booting, then an automatic identification of the motor holding brake will be carried out. If a brake control is detected without diagnostics evaluation (e.g. Brake Relay for AC Drive), then the parameter is set to "brake control without diagnostics evaluation".

It is not permissible to parameterize "brake control without diagnostics evaluation" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1).

p1279[0...3] BI: Motor holding brake OR/AND logic operation / Brake OR AND

VECTOR_G (Ext brake)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2707
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the OR/AND logic operation.

Dependency: Refer to: r1229

Note: [0]: OR logic operation, input 1 --> the result is displayed in r1229.10.

[1]: OR logic operation, input 2 --> the result is displayed in r1229.10.

[2]: AND logic operation, input 1 --> the result is displayed in r1229.11.

[3]: AND logic operation, input 2 --> the result is displayed in r1229.11.

p1280[0...n] Vdc controller or Vdc monitoring configuration (U/f) / Vdc_ctr config U/f

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 6300, 6320
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	1

Description: Sets the configuration of the controller for the DC link voltage (Vdc controller) in the U/f operating mode.

Value:
0: Inhib Vdc ctrl
1: Enable Vdc_max controller
2: Enable Vdc_min controller (kinetic buffering)
3: Enable Vdc_min controller and Vdc_max controller
4: Activate Vdc_max monitoring
5: Activate Vdc_min monitoring
6: Activate Vdc_min monitoring and Vdc_max monitoring

Warning: When the Vdc_max controller is active, the motor can be accelerated (e.g. by driving loads or as a result of high DC link voltages). This can be caused by other drives that are operating on a common DC link busbar.

Caution: If several drives are operated from the same DC link busbar, then it is recommended that the Udc control is only activated for the drives with relatively high moments of inertia.

If the Udc controls for various drives are simultaneously active, then they can mutually influence one another. In this case, the controller dynamic performance should be reduced or the Udc control of individual drives should be deactivated.

Drives with Udc control must be able to brake and accelerate independently of one another.

Note: Re p1280 = 4, 5, 6:

When the threshold in r1282 or r1286 is reached, the DC link voltage monitoring initiates a fault (F07403 or F07404) with a response and therefore reduces additional negative effects on the DC link voltage.

If a braking resistor is connected to the DC link, then the Vdc_max control should be disabled.

Re p1280 = 1, 3:

Only U/f control: When the Vdc max controller is active, fault F07404 is initiated if the speed setpoint ramp is stopped (held) longer than the time set in p1284.

r1282 Vdc_max controller switch-in level (U/f) / Vdc_max on_level

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6320
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_max controller.

If p1294 = 0 (automatic sensing of the switch-in level = off), then the following applies:

AC/AC device: r1282 = 1.15 * sqrt(2) * p0210

DC/AC device: r1282 = 1.15 * p0210

If p1294 = 1 (automatic sensing of the switch-in level = on), then the following applies:

r1282 = Vdc_max - 50.0 V (Vdc_max: Overvoltage threshold of the power unit)

r1282 = Vdc_max - 25.0 V (for 230 V power units)

Notice: If the activation level of the Vdc_max controller is already exceeded in the deactivated state (pulse inhibit) by the DC link voltage, then the controller can be automatically deactivated (see F07401), so that the drive is not accelerated the next time that it is activated.

Note: The Vdc_max controller is not switched back off until the DC-link voltage falls below the threshold 0.95 * r1282 and the controller output is zero.

p1283[0...n] Vdc_max controller dynamic factor (U/f) / Vdc_max dyn_factor

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6320
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the DC link voltage controller (Vdc_max controller).

100% means that p1290, p1291, and p1292 (gain, integral time, and rate time) are used in accordance with their basic settings and on the basis of a theoretical controller optimization.

If subsequent optimization is required, this can be carried out using the dynamic factor. In this case, p1290, p1291, and p1292 are weighted with the dynamic factor p1283.

If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.

Note: The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.

p1284[0...n] Vdc_max controller time threshold (U/f) / Vdc_max t_thresh

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	300.000 [s]	4.000 [s]

Description: Sets the monitoring time for the Vdc_max controller.

If the down ramp of the speed setpoint is held for longer than the time set in p1284, then fault F07404 is output.

p1285[0...n] Vdc_min controller switch-in level (kinetic buffering) (U/f) / Vdc_min on_level

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
65 [%]	150 [%]	76 [%]

Description: Sets the switch-in level for the Vdc-min controller (kinetic buffering).

The value is obtained as follows:

AC/AC unit: p1286[V] = p1285[%] * sqrt(2) * p0210

DC/AC unit: p1286[V] = p1285[%] * p0210

Warning: An excessively high value may adversely affect normal drive operation. The values up to 150 % are intended for operating modes p1240 = 5, 6.

r1286 Vdc_min controller switch-in level (kinetic buffering) (U/f) / Vdc_min on_level

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6320
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_min controller (kinetic buffering).

Note: The Vdc_min controller is not switched back off until the DC-link voltage rises above the threshold 1.05 * p1286 and the controller output is zero.

p1287[0...n] Vdc_min controller dynamic factor (kinetic buffering) (U/f) / Vdc_min dyn_factor

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6320
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the Vdc_min controller (kinetic buffering).

100% means that p1290, p1291, and p1292 (gain, integral time, and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.

If subsequent optimization is required, this can be carried out using the dynamic factor. In this case, p1290, p1291, and p1292 are weighted with the dynamic factor p1287.

If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.

Note: The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.

p1288[0...n] Vdc_max controller feedback coupling factor ramp-fct. gen. (U/f) / Vdc_max factor RFG

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	100.000	0.500

Description: Sets the feedback factor for the ramp-function generator.

Its ramp times are decelerated relative to the output signal of the Vdc_max controller.

Note: For values p1288 = 0.0 to 0.5, the controller dynamics are automatically adapted internally.

p1289[0...n] Vdc_max controller speed threshold (U/f) / Vdc_max n_thresh

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	10.00 [rpm]

Description: Sets the lower speed threshold for the Vdc_max controller.

When this speed threshold is undershot, the Vdc_max control is switched out and the speed is controlled using the ramp-function generator.

p1290[0...n] Vdc controller proportional gain (U/f) / Vdc_ctrl Kp

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6320
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	100.00	1.00

Description: Sets the proportional gain for the Vdc controller (DC link voltage controller).

Note: The gain factor is proportional to the capacitance of the DC link. The parameter is pre-set to a value that is optimally adapted to the capacitance of the individual Motor Module. The capacitances of the other power units which are connected to the DC link can be taken into account using the dynamic factor (p1287 or p1283).

p1291[0...n]	Vdc controller integral time (U/f) / Vdc_ctrl Tn		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6320
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	10000 [ms]	40 [ms]

Description: Sets the integral time for the Vdc controller (DC link voltage controller).

p1292[0...n]	Vdc controller rate time (U/f) / Vdc_ctrl t_rate		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6320
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	1000 [ms]	10 [ms]

Description: Sets the rate time constant for the Vdc controller (DC link voltage controller).

p1293[0...n]	Vdc min controller output limit (U/f) / Vdc_min outp_lim		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6320
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Hz]	600.00 [Hz]	10.00 [Hz]

Description: Sets the output limit for the Vdc min controller (DC link undervoltage controller).

p1294	Vdc_max controller automatic detection ON signal level (U/f) / Vdc_max SenseOnLev		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Activates/de-activates the automatic sensing of the switch-in level for the Vdc_max controller. When the sensing function is de-activated, the activation threshold r1282 for the Vdc_max controller is determined from the parameterized connection voltage p0210.

Value:
0: Automatic detection inhibited
1: Automatic detection enabled

p1295[0...n]	Vdc_min controller time threshold (U/f) / Vdc_min t_thresh		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [s]	10000.000 [s]	0.000 [s]

Description: Sets the time threshold for the Vdc_min controller (kinetic buffering).

If this value is exceeded a fault is output; the required response can be parameterized.

Prerequisite: p1296 = 1

Notice: If a time threshold has been parameterized, the Vdc_max controller should also be activated (p1280 = 3) so that the drive does not shut down with overvoltage when Vdc_min control is exited (due to the time violation) and in the event of fault response OFF3. It is also possible to increase the OFF3 ramp-down time p1135.

p1296[0...n] Vdc_min controller response (kinetic buffering) (U/f / Vdc_min response

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the response for the Vdc_min controller (kinetic buffering).

Value:
0: Buffer Vdc until undervoltage, n<p1297 -> F07405
1: Buff. Vdc until undervolt., n<p1297 -> F07405, t>p1295 -> F07406

Note: Re p1296 = 1:

The quick stop ramp entered in p1135 must not be equal to zero, to prevent overcurrent shutdown if F07406 is triggered.

p1297[0...n] Vdc_min controller speed threshold (U/f) / Vdc_min n_thresh

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Functions	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	50.00 [rpm]

Description: Sets the speed threshold for the Vdc-min controller (kinetic buffering).

If this value is exceeded a fault is output; the required response can be parameterized .

Note: Exiting the Vdc_min control before reaching motor standstill prevents the regenerative braking current from increasing significantly at low speeds, and after a pulse inhibit, means that the motor coasts down.

r1298 CO: Vdc controller output (U/f) / Vdc_ctrl output

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6320
P-Group: Functions	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the actual output of the Vdc controller (DC link voltage controller)

p1300[0...n] Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode

VECTOR_G

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 6300, 6301, 8012
P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	19	0

Description: Sets the U/f control mode of the drive.

Value:
0: U/f control with linear characteristic
1: U/f control with linear characteristic and FCC
2: U/f control with parabolic characteristic
3: U/f control with parameterizable characteristic
4: U/f control with linear characteristic and ECO
5: U/f control for drives requiring a precise freq. (e.g. textiles)
6: U/f control for drives requiring a precise frequency and FCC

	7: U/f control for a parabolic characteristic and ECO 15: Operation with braking resistor 19: U/f control with independent voltage setpoint
Recommend.:	The use of the vector control operating modes is recommended for synchronous motors.
Dependency:	If you are working with reduced supply voltages (p0212.0 = 1), only U/f control with independent voltage setpoint (p1300 = 19) can be set as the operating mode. p1300 = 15 (operation with braking resistor), can only be activated or deactivated in quick commissioning (p0010 = 1). This operating mode is only possible for chassis power units (DC/AC Motor Module).
Notice:	Active slip compensation is required in the U/f control types with Eco mode (p1300 = 4, 7). The scaling of the slip compensation (p1335) should be set so that the slip is completely compensated (generally 100%). The Eco mode is only effective in steady-state operation and when the ramp-function generator is not bypassed. In the case of analog setpoints, if required the tolerance for ramp-up and ramp-down should be actively increased for the ramp-function generator using p1148 in order to reliably signal a steady-state condition.
Note:	The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the actual state is displayed in r1407, bit 2 and bit 3. For motors, type p0300 = 14, operation with U/f control is only recommended for diagnostic purposes.

p1300[0...n] Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode

VECTOR_G (n/M)			
	Can be changed: C2(1), T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 6300, 6301, 8012
	P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	23	20

Description:	Sets the open and closed-loop control mode of a drive.
Value:	0: U/f control with linear characteristic 1: U/f control with linear characteristic and FCC 2: U/f control with parabolic characteristic 3: U/f control with parameterizable characteristic 4: U/f control with linear characteristic and ECO 5: U/f control for drives requiring a precise freq. (e.g. textiles) 6: U/f control for drives requiring a precise frequency and FCC 7: U/f control for a parabolic characteristic and ECO 15: Operation with braking resistor 18: I/f control with fixed current 19: U/f control with independent voltage setpoint 20: Speed control (encoderless) 21: Speed control (with encoder) 22: Torque control (encoderless) 23: Torque control (with encoder)
Recommend.:	The use of the vector control operating modes is recommended for synchronous motors.
Dependency:	Closed-loop speed or torque control (with encoder) cannot be selected if the encoder type is not entered (p0400). Closed-loop speed or torque control can be selected if the closed-loop speed/torque control was selected as operating mode (p0108.2). Only operation with U/f characteristic is possible if the rated motor speed is not entered (p0311). A reluctance motor can only be operated in a U/f control mode (p1300 < 20). Sensorless control on separately excited synchronous motors is only possible with a VSM module (see p0150, p0151). For chassis power units with reduced line voltage (see r0212 bit 0), the drive can only be operated in a control mode (p1300 = 20...23) and with the DC link voltage control activated. Refer to: p0108, r0108, p0212, p0300, p0311, p0400, p1501
Notice:	Active slip compensation is required in the U/f control types with Eco mode (p1300 = 4, 7). The scaling of the slip compensation (p1335) should be set so that the slip is completely compensated (generally 100%). The Eco mode is only effective in steady-state operation and when the ramp-function generator is not bypassed. In the case of analog setpoints, if required the tolerance for ramp-up and ramp-down should be actively increased for the ramp-function generator using p1148 in order to reliably signal a steady-state condition.

Note: The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the actual state is displayed in r1407, bit 2 and bit 3.

For the open-loop control modes p1300 = 5 and 6 (textile sector), slip compensation p1335, resonance damping p1338, and the Imax frequency controller are switched off internally so that the output frequency can be set precisely. The Imax voltage controller remains active.

For the open-loop control modes p1300 = 4 and 7 (Eco mode), the efficiency can be optimized by varying the voltage (when the operating point is constant).

Separately-excited synchronous motors can only be operated in modes p1300 = 20, 21 and 23 - or for diagnostic purposes in modes p1300 = 0, 3 and 18. For I/f control (p1300 = 18), the current amplitude can be set using p1609. Both for U/f as well as for I/f control only a small load may be applied to the separately-excited synchronous motor because the excitation current is not calculated as a function of the load.

During operation (pulses enabled) the open-loop/closed-loop control mode cannot be changed by changing over drive data sets.

p1300 is pre-assigned depending on r0108.2 and p0187.

p1302[0...n] U/f control configuration / U/f config

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 bin

Description: Sets the configuration for the U/f control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Output voltage starting angle zero	Yes	No	-
01	Take into account the setpoint voltage sign	Yes	No	-
02	Reserved	-	-	-
04	Field orientation	Yes	No	-
06	Immediate setpoint transfer for pulse inhibit	Yes	No	-

Note: Re bit 00:

If the bit is set the device will always start up with setpoint angle zero on pulse enable. This also affects the setpoint angle for DC braking (p1231).

Re bit 01:

If the bit is set, in the case of U/f control with independent voltage setpoint (p1300 = 19) and negative setpoint voltages at the input of p1330, the setpoint angle is rotated through 180 degrees, thereby achieving a negative output voltage. The voltage boost is in this case not active (p1310, p1311).

Re bit 02:

Only for internal Siemens use.

Re bit 06:

Only for p1300 = 19.

When the bit is set, the setpoints from p1330 for pulse inhibit are transferred without any delay.

p1310[0...n] Starting current (voltage boost) permanent / I_start (Ua) perm

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6300, 6301
P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	250.0 [%]	50.0 [%]

Description: Defines the voltage boost as a [%] referred to the rated motor current (p0305).

The magnitude of the permanent voltage boost is reduced with increasing frequency so that at the rated motor frequency, the rated motor voltage is present.

The magnitude of the boost in Volt at a frequency of zero is defined as follows:

Voltage boost [V] = 1.732 x p0305 (rated motor current [A]) x r0395 (stator/primary section resistance [ohm]) x p1310 (permanent voltage boost [%]) / 100 %

At low output frequencies, there is only a low output voltage in order to maintain the motor flux. However, the output voltage can be too low in order to achieve the following:

- magnetize the induction motor.
- hold the load.
- compensate for losses in the system.

This is the reason that the output voltage can be increased using p1310.

The voltage boost can be used for both linear as well as square-law U/f characteristics.

Dependency: The starting current (voltage boost) is limited by the current limit p0640.

The accuracy of the starting current depends on the setting of the stator and feeder cable resistance (p0350, p0352).

Refer to: p1300, p1311, p1312, r1315

Notice: The starting current (voltage boost) increases the motor temperature (particularly at zero speed).

Note: The starting current as a result of the voltage boost is only effective for U/f control (p1300).

The boost values are combined with one another if the permanent voltage boost (p1310) is used in conjunction with other boost parameters (acceleration boost (p1311), voltage boost for starting (p1312)).

However, these parameters are assigned the following priorities: p1310 > p1311, p1312

p1311[0...n] Starting current (voltage boost) when accelerating / I_start accel

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6300, 6301
P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	250.0 [%]	0.0 [%]

Description: p1311 only results in a voltage boost when accelerating and generates a supplementary torque to accelerate the load.

The voltage boost becomes effective for a positive setpoint increase and disappears as soon as the setpoint has been reached. The build-up and withdrawal of the voltage boost are smoothed.

The magnitude of the boost in Volt at a frequency of zero is defined as follows:

Voltage boost [V] = 1.732 * p0305 (rated motor current [A]) x r0395 (stator/primary section resistance [ohm]) x p1311 (voltage boost when accelerating [%]) / 100 %

Dependency: The current limit p0640 limits the boost.

Refer to: p1300, p1310, p1312, r1315

Notice: The voltage boost results in a higher motor temperature increase.

Note: The voltage boost when accelerating can improve the response to small, positive setpoint changes.

Assigning priorities for the voltage boosts: refer to p1310

p1312[0...n] Starting current (voltage boost) when starting / I_start start

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6300, 6301

Min	**Max**	**Factory setting**
0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310.

This parameter specifies the voltage of the first point along the characteristic.

Dependency: Selects the freely programmable characteristic using p1300 = 3.

The following applies to the frequency values: p1320 <= p1322 <= p1324 <= p1326. Otherwise, a standard characteristic is used that contains the rated motor operating point.

Refer to: p1300, p1310, p1311, p1321, p1322, p1323, p1324, p1325, p1326, p1327

Note: Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327.

The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.

0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: Sets the starting frequency of the slip compensation.

Note: For p1334 = 0, the starting frequency of the slip compensation is automatically set to 6 % of the rated motor frequency.

p1335[0...n] Slip compensation scaling / Slip comp scal

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6300, 6310
P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	600.0 [%]	0.0 [%]

Description: Sets the setpoint for slip compensation in [%] referred to r0330 (motor rated slip).

p1335 = 0.0 %: Slip compensation de-activated.

p1335 = 100.0 %: The slip is completely compensated.

Dependency: Prerequisite for a precise slip compensation for p1335 = 100 % are the precise motor parameters (p0350 ... p0360).

If the parameters are not precisely known, a precise compensation can be achieved by varying p1335.

For U/f control types with Eco optimization (4 and 7), the slip compensation must be activated in order to guarantee correct operation.

Note: The purpose of slip compensation is to maintain a constant motor speed regardless of the applied load. The fact that the motor speed decreases with increasing load is a typical characteristic of induction motors.

For synchronous motors, this effect does not occur and the parameter has no effect in this case.

For the open-loop control modes p1300 = 5 and 6 (textile sector), the slip compensation is internally disabled in order to be able to precisely set the output frequency.

If p1335 is changed during commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1335 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).

p1336[0...n] Slip compensation limit value / Slip comp lim val

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2

Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6300, 6310
P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	100.00	0.00

Description: Sets the gain for resonance damping for U/f control.

Dependency: Refer to: p1300, p1339, p1349

Note: The resonance damping function dampens active current oscillations that frequency occur under no-load conditions.

The resonance damping is active in a range from approximately 6 % of the rated motor frequency (p0310). The shutoff frequency is determined by p1349.

For the open-loop control modes p1300 = 5 and 6 (textile sectors), the resonance damping is internally disabled in order that the output frequency can be precisely set.

p1339[0...n] U/f mode resonance damping filter time constant / Uf Res_damp T

Min	**Max**	**Factory setting**
1.00 [ms]	1000.00 [ms]	20.00 [ms]

Description: Sets the filter time constant for resonance damping for U/f control.

Dependency: Refer to: p1300, p1338, p1349

p1340[0...n] I_max frequency controller proportional gain / I_max_ctrl Kp

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6300
P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	0.500	0.000

Description: Sets the proportional gain of the I_max frequency controller.

The I_max controller reduces the drive converter output current if the maximum current (r0067) is exceeded.

In the U/f operating modes (p1300) for the I_max control, one controller is used that acts on the output frequency and one controller that acts on the output voltage. The frequency controller reduces the current by decreasing the converter output frequency. The frequency is reduced down to a minimum value (equaling twice rated slip). If the overcurrent condition cannot be successfully resolved using this measure, then the drive converter output voltage is reduced using the I_max voltage controller. Once the overcurrent condition has been resolved, the drive is accelerated along the ramp set in p1120 (ramp-up time).

Dependency: In the U/f modes (p1300) for textile applications and for external voltage setpoints, only the I_max voltage controller is used.

Notice: When de-activating the I_max controller, the following must be carefully observed:

When the maximum current (r0067) is exceeded, the output current is no longer reduced. The drive is switched off when the overcurrent limits are exceeded.

Note: The I_max limiting controller becomes ineffective if the ramp-function generator is de-activated with p1122 = 1.

p1341 = 0: I_max frequency controller de-activated and I_max voltage controller activated over the complete speed range.

p1341[0...n]	I_max frequency controller integral time / I_max_ctrl Tn		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3

	Not for motor type: -	**Scaling:** p2005	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the differential angular generation for U/f control.

p1358[0...n]	Angular difference symmetrizing actual angle / Sym act angle		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Sets the dead time for the symmetrizing of the actual angle value for the differential angular generation.
The selected multiplier refers to the current controller clock cycle (dead time= p1358 * p0115[0]).

r1359	CO: Angular difference / Angular difference		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2005	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°]	- [°]	- [°]

Description: Displays the output of the differential angular generation.

Note: The difference between the setpoint angle, read-in in p1356 and the actual value of the U/f control delayed with p1358 is displayed.

p1360	Braking chopper braking resistor cold / Br_chop R cold		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -

	Min	**Max**	**Factory setting**
	0.000 [ohm]	10.000 [ohm]	0.000 [ohm]

Description: Sets the braking resistor for the braking chopper.

Dependency: Select operation with braking resistor: p1300 = 15
Refer to: p1362, r1363, p1364

p1362[0...1] Braking chopper activation threshold / Br_chop thresh

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [V]	1158 [V]	[0] 0 [V] [1] 60 [V]

Description: Sets the activation threshold for the brake chopper.
The hysteresis defines the range of the output voltage from zero up to the maximum voltage.

Index: [0] = Braking chopper threshold value
[1] = Braking chopper hysteresis

Dependency: Select operation with braking resistor: p1300 = 15
Refer to: p1360, r1363, p1364

r1363 CO: Braking chopper output voltage / Br_chop U_output

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 5_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the actual power unit output voltage (Motor Module) in braking chopper operation.

Dependency: Select operation with braking resistor: p1300 = 15
Refer to: p1360, p1362, p1364

p1364 Braking chopper resistor asymmetry / Br_chop R asym

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: U/f open-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	100.00 [%]	25.00 [%]

Description: Sets the percentage value for the asymmetry detection for the braking chopper.
The ripple of the absolute current r0068 is monitored.
The reference value is the average value of the absolute current.
The minimum monitoring value is 10 % of the power unit rated current.

Dependency: Select operation with braking resistor: p1300 = 15
Refer to: p1360, p1362, r1363

Note: For p1364 = 0, dissymmetry identification is deactivated.
Asymmetry can also be displayed if the absolute current manifests ripple, caused by load-related ripple of the DC link voltage. In this particular case, p1364 must be increased.

r1369[0] CO: Phase current actual value filtered / I_ph act val filt

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6300
P-Group: U/f open-loop control	**Units group:** 6_5	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [A]	- [A]	- [A]

Description: Displays the measured actual phase currents as peak value.
This value is averaged for the display in the speed controller sampling time (p0115[1]).

Index: [0] = Phase U

Dependency: The signal is only displayed in operating mode p1300 = 19 (U/f control with independent voltage setpoint) and is used to control DC currents (e.g. for excitation (field) controllers).

p1400[0...n] Speed control configuration / n_ctrl config

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6490
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 1000 0000 0010 0001 bin

Description: Sets the configuration for the closed-loop speed control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Automatic Kp/Tn adaptation active	Yes	No	6040
01	Sensorless vector control freeze I comp	Yes	No	6040
02	Acceleration pre-control source	External (p1495)	Internal (n_set)	6031
03	Reference model speed setpoint I component	ON	OFF	6031
05	Kp/Tn adaptation active	Yes	No	6040
06	Free Tn adaptation active	Yes	No	6050
14	Torque pre-control	Always active	For n_ctrl enab	6060
15	Sensorless vector control speed pre-control	Yes	No	6030
16	I component for limiting	Enable	Hold	6030
18	Moment of inertia estimator active	Yes	No	6030
19	Anti-windup for integral component	Yes	No	6030
20	Acceleration model	ON	OFF	6031
22	Obtain moment of inertia estimator value for pulse inhibit	Yes	No	6030
23	Acceleration model (with speed encoder)	Yes	No	6030

Note: Re bit 01:

When the bit is set, the I component of the speed controller is kept when changing into the open-loop controlled mode.

Re bit 16:

When the bit is set, the integral component of the speed controller is only held if it reaches the torque limit.

Re bit 19:

When this bit is set, speed overshoots when accelerating along the torque limit and for load surges are reduced. If the setpoint torque reaches the torque limit, then the integral component is set to the difference between the torque limit and P component.

Re bit 20:

The acceleration model for the speed setpoint is only active for encoderless vector control if p1496 is not zero.

p1401[0...n] Flux control configuration / Flux ctrl config

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** 6491
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 1110 bin

Description: Sets the configuration for flux setpoint control

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Flux setpoint soft starting active	Yes	No	6722, 6725
01	Flux setpoint differentiation active	Yes	No	6723, 6726

	02	Flux build-up control active	Yes	No	6722, 6723, 6725, 6726
	03	Flux characteristic load-dependent	Yes	No	6725
	04	Flux controller (ASM with encoder)	Yes	No	-
	05	Flux impression (ASM with encoder)	with model chngov	From 30 % n_rated	-
	06	Quick magnetizing	Yes	No	6722
	07	Pre-control speed limitation	Yes	No	6640
	08	Speed limiting controller	With M_limits	With I_limits	6640
	09	Flux boost when establishing torque	Yes	No	-
	10	Flux boost at low speed	Yes	No	-

Note: Re bit 00 (only for induction motors):

Initially, the flux is only established with a low rate of rise when magnetizing the induction motor. The flux setpoint p1570 is reached again at the end of the magnetizing time p0346.

Re bit 01 (only for induction motors and separately excited synchronous motors):

The flux differentiation can be switched out if a significant ripple occurs in the field-generating current setpoint (r0075) when entering the field weakening range. However, this is not suitable for fast acceleration operations because then, the flux decays more slowly and the voltage limiting responds.

Re bit 02 (only for induction motors):

The flux build-up control operates during the magnetizing phase p0346 of the induction motor. If it is switched out, a constant current setpoint is injected and the flux is built up corresponding to the rotor time constant. When quick magnetizing (p1401.6 = 1) is selected and when flux build-up control is de-energized alarm A07416 is displayed.

Re bit 03:

The load-dependent calculation of the flux characteristic is available for separately-excited synchronous motors.

Re bit 04 (only for induction motors with encoder):

The flux controller does not operate in the range of the current model and not in the range of the flux impression (refer to p1750.4).

Re bit 05 (only for induction motors with encoder):

Extremely rugged control operation is possible by directly toggling between the current model and flux impression. We therefore recommend that, in addition, the time-controlled model change is switched in (p1750.4 = 1) or the model changeover limits are significantly increased (p1752 > 0.35 * p0311; p1753 = 5 %).

Re bit 06 (not for induction motors):

Magnetizing is carried out with the maximum current (0.9 * r0067 <= p1603 * r0209). Magnetization has been completed if the flux threshold value p1573 or the magnetizing time p0346 has been reached. With active identification of the stator resistance (see p0621) quick magnetizing is internally de-activated and alarm A07416 is displayed. During a flying restart of a rotating motor (see p1200) no quick magnetizing takes place.

Re bit 07:

if the speed of the drive exceeds the effective speed limit of the speed limiting controller, the torque limit is reduced linearly to zero as the deviation becomes greater. This reduces the integral component of the speed controller and, in turn, the overshoot during load shedding (see also F07901 and p2162).

Re bit 08:

The speed limiting controller sets the speed to maximum by opening the torque limits as far as the current limits (bit 8 = 0) or taking the torque limits into account (bit 8 = 1).

p1402[0...n] Closed-loop current control and motor model configuration / I_ctrl config

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0001 bin

Description: Sets the configuration for the closed-loop control and the motor model.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Speed-following error correction active	Yes	No	-
02	Current controller adaptation active	Yes	No	-
07	Taking into account slip for speed and frequency calculation	Yes	No	-

Bit	Signal name	1 signal	0 signal	FP
08	Changeover current model/voltage model with speed setpoint	Yes	No	-
10	d-current controller adaptation model-based	Yes	No	-
15	Current controller precontrol active for Vdc controller oper.	Yes	No	-

Note: Re bit 00:

When the bit is set, the speed following error is compensated that is obtained as a result of the smoothing time constant in p1441.

Re bit 02:

The current controller adaptation (p0391 ... p0393) is only calculated when the bit is set.

Re bit 07:

Only with encoderless control of separately excited synchronous motors.

Re bit 08:

Only with encoderless control of separately excited synchronous motors.

Re bit 15:

For DC link voltage control (see FP7960) the dynamic current controller pre-control is activated (scalable using p1702, p1703).

r1406.4...15 CO/BO: Control word speed controller / STW n_ctrl

VECTOR_G (n/M)

14	Current model FEM: magnetizing excitation current limited to 0	Yes	No	6726
15	Excitation current differential exceeded	Yes	No	6726

Note: Re bit 11:

For operation with speed encoder, this bit is set as a result of steps/jumps in the speed signal (see p0492) or due to deviations at the adaptation controller output (see p1744).

p1416[0...n] Speed setpoint filter 1 time constant / n_set_filt 1 T

VECTOR_G (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3

Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Func. diagram:** 6020, 6030

P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -

Not for motor type: REL | **Scaling:** - | **Expert list:** 1

Min	Max	Factory setting
0.00 [ms]	5000.00 [ms]	0.00 [ms]

Description: Sets the time constant for the speed setpoint filter 1 (PT1).

p1428[0...n] Speed pre-control balancing dead time / n_prectrBal t_dead

VECTOR_G (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3

Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Func. diagram:** 6031

P-Group: Closed-loop control | **Units group:** - | **Unit selection:** -

Not for motor type: REL | **Scaling:** - | **Expert list:** 1

Min	Max	Factory setting
0.0	3.0	0.0

Description: Sets the dead time to symmetrize the speed setpoint for active torque pre-control.

The selected multiplier refers to the speed controller clock cycle (dead time= p1428 * p0115[1]).

Dependency: In conjunction with p1429, this parameter can emulate the characteristics of how the torque is established (dynamic response of closed current control loop).

The parameter is only effective if the acceleration model is supplied using external acceleration signals (p1400.2 = 1). For p1400.2 = 0, a fixed dead time is used.

Refer to: p1429, p1511

p1429[0...n] Speed pre-control balancing time constant / n_prectr bal T

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5030, 5042, 5210, 6031
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the time constant (PT1) for symmetrizing the speed setpoint for active torque pre-control.

Dependency: In conjunction with p1428, this parameter can emulate the characteristics of how torque is established (dynamic response of the closed current control loop).

For VECTOR (r0107) the following applies:

The parameter is only effective if the acceleration model is supplied using external acceleration signals (p1400.2 = 1). For p1400.2 = 0, time constant p1442 (or p1452 for sensorless vector control) is used.

Refer to: p1428, p1511

r1431 CO: Speed pre-control to motor model / n_prectrl mot_mod

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6030

Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the speed setpoint for pre-controlling the motor model with sensorless vector control.

Note: With p1400.15 = 0 or encoderless torque control, the pre-control signal is kept continuously in the range of the voltage model.

p1433[0...n] Speed controller reference model natural frequency / n_ctrl RefMod fn

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5030, 6031
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [Hz]	8000.0 [Hz]	0.0 [Hz]

Description: Sets the natural frequency of a PT2 element for the reference model of the speed controller.

Recommend.: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.

Dependency: Together with p1434 and p1435, the characteristics (in the time domain) of the closed-loop speed control (P) can be emulated.

For VECTOR (r0107) the following applies:

The reference model is activated with p1400.3 = 1. For sensorless vector control (p1300 = 20) the reference model is disabled in open-loop speed controlled operation (refer to p1755).

Refer to: p1434, p1435

p1434[0...n] Speed controller reference model damping / n_ctrl RefMod D

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5030, 6031

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	5.000	1.000

Description: Sets the damping of a PT2 element for the reference model of the speed controller.

Recommend.: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.

Dependency: In conjunction with p1433 and p1435, the characteristics (in time) of the P-controlled speed control loop can be emulated.

For VECTOR (r0107) the following applies:

The reference model is activated with p1400.3 = 1.

Refer to: p1433, p1435

p1435[0...n] Speed controller reference model dead time / n_ctrRefMod t_dead

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5030, 6031
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	3.00	0.00

Description: Sets the "fractional" dead time for the reference model of the speed controller.

This parameter emulates the computing dead time of the proportionally controlled speed control loop.

The selected multiplier refers to the speed controller clock cycle (dead time= p1435 * p0115[1]).

Recommend.: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.

Dependency: In conjunction with p1433 and p1434, the characteristics (in time) of the P-controlled speed control loop can be emulated.

For VECTOR (r0107) the following applies:

The reference model is activated with p1400.3 = 1.

Refer to: p0115, p1433, p1434

r1436 CO: Speed controller reference model speed setpoint output / RefMod n_set outp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3001, 5019, 5030, 5042, 5210, 6020, 6031
	P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output of the speed setpoint after setpoint limiting for the P component of the speed controller.

For U/f operation, the value that is displayed is of no relevance.

Dependency: Refer to: r1439

Note: In the standard state (the reference model is de-activated), r1438 = r1439.

r1439	Speed setpoint I component / n_set I_comp		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5030, 5040, 6031
	P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the speed setpoint for the I component of the speed controller (output of the reference model after the setpoint limiting).

Dependency: Refer to: r1438

Note: In the standard state (the reference model is de-activated), r1438 = r1439.

p1440[0...n]	CI: Speed controller speed actual value / n_ctrl n_act		
VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6040
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	63[0]

Description: Sets the signal source for the speed actual value of the speed controller.

Dependency: Refer to: r1443

Danger: When using external speed actual values for the speed controller, for a direction of rotation change via p1821 = 1, then its polarity must also be changed (e.g. for an encoder DO via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.

Caution: Speed control with encoder (p1300 = 21):

For the speed or position signal of the motor model there must always be a motor encoder available (evaluation via SMC/SMI, see p0400). The actual speed of the motor (r0061) and the position data for synchronous motors continue to come from this motor encoder and are not affected by the setting of p1440.

Interconnection of p1440:

If connector input p1440 is interconnected with an external speed actual value, the identical scaling of the speed should be observed (p2000).

Notice: Speed control without encoder (p1300 = 20):

Dependent upon the transmission path of the external speed signal there will be dead times which have to be taken into account when setting the speed controller parameters (p1470, p1472) and can lead to dynamic losses accordingly. It is for this reason that signal transmission times have to be kept as low as possible.

So that the speed controller can also work at standstill, set p1750.2 = 1 (closed-loop operation from zero speed for passive loads). If you do not make this setting, operation will switch to open-loop speed control in the low speed range, switching the closed-loop speed controller off and rendering the measured actual speed ineffective.

Note: Speed control with encoder (p1300 = 21):

An external speed signal should, on the average, correspond to the speed of the motor encoder (r0061).

p1441[0...n] Actual speed smoothing time / n_act T_smooth

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4710, 4715
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	1000.00 [ms]	0.00 [ms]

Description: Sets the smoothing time constant (PT1) for the speed actual value.

Dependency: Refer to: r0063

Notice: Smoothing times above 20 ms are only possible if the drive is accelerated or braked with the appropriately long ramp-up/ramp-down times. Otherwise, significant torque errors can occur and there is the danger that the drive is powered down (tripped) with F07902 (motor stalled).

Note: The speed actual value should be smoothed for encoders with a low pulse number or for resolvers.

After this parameter has been changed, we recommend that the speed controller is adapted and/or the speed controller settings checked Kp (p1460) and Tn (p1462).

p1442[0...n] Speed controller speed actual value smoothing time / n_ctr n_act T_smth

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6020, 6040
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	32000.00 [ms]	4.00 [ms]

Description: Sets the smoothing time for the actual speed value of the speed controller for closed-loop control with encoder.

Note: The smoothing must be increased if there is gear backlash. For longer smoothing times, the integral time of the speed controller must also be increased (e.g. using p0340 = 4).

r1443 CO: Speed controller speed actual value at actual value input / n_ctrl n_act inp

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the adaptation factor after the adaptation range (> p1457) to additionally adapt the P gain of the speed/velocity controller.

Dependency: Refer to: p1455, p1456, p1457, p1458

Note: If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.

p1460[0...n]	Speed controller P gain adaptation speed lower / n_ctrl Kp n lower		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6020, 6040
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000	999999.000	0.300

Description: Sets the P gain of the speed controller before the adaptation speed range (0 ... p1464).

This value corresponds to the basic setting of the P gain of the speed controller without adaptation (p1461 = 100 %).

Dependency: For p0528 = 1, the speed controller gain is represented without any dimensions.

Refer to: p1461, p1464, p1465

p1461[0...n]	Speed controller Kp adaptation speed upper scaling / n_ctr Kp n up scal		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6050
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the P gain of the speed controller for the upper adaptation speed range (> p1465).

The entry is made referred to the P gain for the lower adaptation speed range of the speed controller (% referred to p1460).

Dependency: Refer to: p1460, p1464, p1465

Note: If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition p1464, then the controller gain below p1465 is adapted with p1461. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1462[0...n]	Speed controller integral time adaptation speed lower / n_ctrl Tn n lower		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5040, 5042, 6020, 6040
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [ms]	100000.00 [ms]	20.00 [ms]

Description: Sets the integration time of the speed controller before the adaptation speed range (0 ... p1464).

This value corresponds to the basic setting of the integral time of the speed controller without adaptation (p1461 = 100 %).

Dependency: Refer to: p1463, p1464, p1465

Note: The integral component is stopped if the complete controller output or the sum of controller output and torque pre-control reach the torque limit.

p1463[0...n]	Speed controller Tn adaptation speed upper scaling / n_ctr Tn n up scal		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6050
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the integral time of the speed controller after the adaptation speed range (> p1465).

The entry is made referred to the integral time for the lower adaptation speed range of the speed controller (% referred to p1462).

Dependency: Refer to: p1462, p1464, p1465

Note: If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller integral time below p1465 is adapted with p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1464[0...n] Speed controller adaptation speed lower / n_ctrl n lower

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6050
P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the lower adaptation speed of the speed controller.
No adaptation is effective below this speed.

Dependency: The parameter is set by the speed controller optimization. Adaptation to the application should then be subsequently made.
Refer to: p1460, p1461, p1462, p1463, p1465

Note: If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller below p1465 is adapted with p1461 or p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1465[0...n] Speed controller adaptation speed upper / n_ctrl n upper

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6050
P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]

Description: Sets the upper adaptation speed of the speed controller.
No adaptation is effective above this speed.
For the proportional gain, p1460 x p1461 is effective.
For the integral time, p1462 x p1463 is effective.

Dependency: The parameter is set by the speed controller optimization. Adaptation to the application should then be subsequently made.
Refer to: p1460, p1461, p1462, p1463, p1464

Note: If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller below p1465 is adapted with p1461 or p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1466[0...n] CI: Speed controller P-gain scaling / n_ctrl Kp scal

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [ms]	100000.0 [ms]	20.0 [ms]

Description: Set the integral time for encoderless operation for the speed controller.

Note: The integral component is stopped if the complete controller output or the sum of controller output and torque pre-control reach the torque limit.

p1475[0...n] CI: Speed controller torque setting value for motor holding brake / n_ctrl M_sv MHB

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6040
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the torque setting value when starting up with motor holding brake.

Recommend.: To hold the actual torque when stopping the motor, you are advised to set p1400 bit 1 = 1. As a result, the integral component of the speed controller is frozen when changing to the open-loop controlled operating range.

Dependency: The switching in of the torque setting value for the motor holding brake has a higher priority than the setting of the integrator value using p1477 and p1478.

Note: The setting of the integral output of the speed controller begins after magnetizing (see p0346, r0056 bit 4) and ends at the end of the brake control opening time p1216. A setting value of zero means that no setting procedure will take place.

Description: Sets the signal source to set the integrator setting value (p1478).

Dependency: Refer to: p1478, p1479

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For the interface mode "SIMODRIVE 611 universal" (p2038 = 1), p1477 and p1478 are used for the signal STW2.6 (integrator inhibit, speed controller).

p1478[0...n] CI: Speed controller integrator setting value / n_ctr integ_setVal

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6040
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the integrator setting value for the velocity controller.

The signal to set this integrator setting value is interconnected via p1477.

Dependency: The setting value of the speed controller integrator is weighted with the scaling factor of the signal source in p1479.

If p1478 is interconnected to the integral output of the speed controller (r1482), then after the magnetizing time (r0346) and if the speed controller is enabled, the integral component of the controller is set to the last value before the pulse inhibit. This value is set if no setting command (p1477) is interconnected or, at the instant that the pulses were inhibited, a setting command is available, which is not de-activated up to the next time that the pulses are inhibited. For sensorless vector control, in addition p1400.1 should be set to 1 so that when the drive is stopped, the integral component of the speed controller is not controlled down to zero.

In order that when setting the integrator output, only the static torque is detected, we recommend that the accelerating torque is completely pre-controlled (e.g. p1496).

If p1478 is interconnected to another output other than r1482, then after magnetizing and speed controller enable, the integral output is set once if the setting command is not interconnected (p1477 = 0).

Refer to: p1477, p1479

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Sets the source for droop feedback.

With increasing torque, the speed setpoint is reduced (enabled using p1492), so that for mechanically coupled drives a load equalization (load compensation) is obtained.

A load difference compensation is also possible, if p1486 is interconnected with the torque setpoint of the other drive.

Value:
0: Droop feedback not connected
1: Droop from torque setpoint
2: Droop from speed controller output
3: Droop from integral output speed controller

Dependency: Refer to: p1486, p1487, p1489, r1490, p1492

Caution: For active acceleration precontrol of the speed controller (refer to p1496), it is not recommended that p1488 is set to 1, as this could result in positive coupling effects. Instead of this, as source of the droop feedback, the output signal of the speed controller should be used, which generally sets the load torque.

p1489[0...n] Droop feedback scaling / Droop scal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6030

Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the output signal of the droop calculation. The droop feedback result is subtracted from the speed setpoint when activated (p1492).

Dependency: Refer to: p1486, p1487, p1488, p1489, p1492

p1492[0...n]	BI: Droop feedback enable / Droop enable		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2520, 6030
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Enables the droop to be applied to the speed/velocity setpoint.

Dependency: Refer to: p1486, p1487, p1488, p1489, r1490

Note: Even when not enabled, the droop speed is calculated but not subtracted from the setpoint speed. This makes it possible to subtract the result of this calculation from the speed of another drive.

r1493	CO: Moment of inertia total, scaled / M_mom inert tot_sc		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6031
	P-Group: Closed-loop control	**Units group:** 25_1	**Unit selection:** p0100
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [kgm²]	- [kgm²]	- [kgm²]

Description: Display and connector output for the parameterized total moment of inertia.

The value is calculated with ((p0341 * p0342) * p1496).

The scaling is not take into account using p1497.

p1495[0...n]	CI: Acceleration pre-control / a_prectrl		
VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6031
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2007	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the acceleration pre-control.

Dependency: The signal source for the acceleration is activated with p1400.2 = 1.

For p1400.2 = 0, the acceleration pre-control is calculated from the speed setpoint change from r0062.

For p1400.2 = 0 and activate reference model (p1400.3 = 1) the acceleration pre-control is switched out.

Refer to: p1400, p1496

Note: If the acceleration is entered as external signal, then the accelerating torque is calculated as follows (r1518):

r1518 = acceleration (% of p2007) / 100 % * (p2007 * 60 s) / p0311 * r0345 / 1 s * r0333

p1496[0...n]	Acceleration pre-control scaling / a_prectrl scal		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6020, 6031
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	10000.0 [%]	0.0 [%]

Description: Sets the scaling for the acceleration pre-control of the speed/velocity controller.

Dependency: When the reference model is activated (p1400.3 = 1) and for an internal acceleration pre-control (p1400.2 = 0), the acceleration pre-control is switched out (disabled). The reference model (p1400.3 = 1) and external acceleration pre-control (p1400.2 = 1) can be operated together.

Refer to: p0341, p0342

Warning:

The acceleration precontrol r1518 is kept at the old value if the ramp-function generator tracking (r1199.5) is active or the ramp-function generator output is set (r1199.3). This is used to avoid torque peaks. Depending on the application, it may therefore be necessary to disable the ramp-function generator tracking (p1145 = 0) or the acceleration precontrol (p1496 = 0).

The acceleration precontrol is set to zero, if the Vdc control is active (r0056.14/15).

Note:

The parameter is set to 100% by the rotating measurement (refer to p1960).

The acceleration pre-control may not be used if the speed setpoint manifests significant ripple (e.g. analog setpoint) and the rounding-off in the speed ramp-function generator is disabled.

We also recommend that the pre-control mode is not used if there is gearbox backlash.

	Min	**Max**	**Factory setting**
	- [Nm]	- [Nm]	- [Nm]

Description: Displays the accelerating torque for pre-control of the speed controller.

Index: [0] = Unsmoothed
[1] = Smoothed

Dependency: Refer to: p0341, p0342, p1496

p1520[0...n] CO: Torque limit upper / M_max upper

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6020, 6630
P-Group: Closed-loop control	**Units group:** 7_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
-1000000.00 [Nm]	20000000.00 [Nm]	0.00 [Nm]

Description: Sets the fixed, upper torque limit.

Dependency: Refer to: p1521, p1522, p1523, r1538, r1539

Danger: Negative values when setting the upper torque limit (p1520 < 0) can result in the motor accelerating in an uncontrollable fashion.

Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.

Note: The torque limit is limited to 400% of the rated motor torque. When automatically calculating the motor/closed-loop control parameters (p0340), the torque limit is set to match the current limit (p0640).

p1521[0...n] CO: Torque limit lower / M_max lower

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6020, 6630
P-Group: Closed-loop control	**Units group:** 7_1	**Unit selection:** p0505

Min	**Max**	**Factory setting**
-20000000.00 [Nm]	1000000.00 [Nm]	0.00 [Nm]

Description: Sets the fixed, lower torque limit.

Dependency: Refer to: p1520, p1522, p1523

Danger: Positive values when setting the lower torque limit (p1521 > 0) can result in the motor accelerating in an uncontrollable fashion.

Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.

Note: The torque limit is limited to 400% of the rated motor torque. When automatically calculating the motor/closed-loop control parameters (p0340), the torque limit is set to match the current limit (p0640).

p1522[0...n] CI: Torque limit upper / M_max upper

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6630

Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the lower torque limit of all torque limits without offset.

Dependency: Refer to: p1520, p1521, p1522, p1523, p1528, p1529

p1528[0...n] — CI: Torque limit upper scaling / M_max upper scal

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6630
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1524[0]

Description: Sets the signal source for the scaling of the upper torque limit in p1522.

Danger: For p1400.4 = 0 (torque limiting, upper/lower) the following applies:
Negative values resulting from the signal source and scaling can cause the motor to accelerate in an uncontrolled manner.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1529[0...n] — CI: Torque limit lower scaling / M_max lower scal

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6630
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1525[0]

Description: Sets the signal source for the scaling of the lower torque limit in p1523.

Danger: For p1400.4 = 0 (torque limiting, upper/lower) the following applies:
Positive values resulting from the signal source and scaling can cause the motor to accelerate in an uncontrolled manner.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1530[0...n] — Power limit motoring / P_max mot

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6640
P-Group: Closed-loop control	**Units group:** 14_5	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [kW]	100000.00 [kW]	0.00 [kW]

Description: Sets the power limit when motoring.

Dependency: Refer to: p0500, p1531

Note: The power limit is limited to 300% of the rated motor power.

p1531[0...n]	**Power limit regenerative / P_max gen**		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6640
	P-Group: Closed-loop control	**Units group:** 14_5	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-100000.00 [kW]	-0.01 [kW]	-0.01 [kW]

Description: Sets the regenerative power limit.

Dependency: Refer to: p0500, p1530

Note: The power limit is limited to 300% of the rated motor power.

For power units without regenerative feedback into the line supply, the regenerative power limit is pre-set to 30% of the motoring power limit p1530 and in the ratio rated drive converter power to rated motor power. If a braking resistor is connected to the DC link, then the power limit can be correspondingly increased.

r1533	**Current limit torque-generating total / Iq_max total**		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6640

	P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the maximum limit for the torque-generating current component.

Index 0 indicates the signal limited by the Vdc controller.

Index: [0] = Limited
[1] = Unlimited

r1537[0...1]	**Current limit minimum torque-generating current / Isq_min**		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6640, 6710
	P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the minimum limit for the torque-generating current component.

Index 0 indicates the signal limited by the Vdc controller.

Index: [0] = Limited
[1] = Unlimited

r1538	CO: Upper effective torque limit / M_max upper eff		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6020, 6640
	P-Group: Closed-loop control	**Units group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the actual effective upper torque limit.

Note: The effective upper torque limit is reduced with respect to the selected upper torque limit p1520, if the current limit p0640 is reduced or the rated magnetizing current of the induction motor p0320 is increased.

The following applies in the case of VECTOR: This may be the case for rotating measurements (see p1960).

The following applies in the case of VECTOR: Further variable torque limiting is possible (e.g. binector input p1540).

The torque limit p1520 can be re-calculated using p0340 = 1, 3 or 5.

r1539	CO: Lower effective torque limit / M_max lower eff		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6020, 6640
	P-Group: Closed-loop control	**Units group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the actual effective lower torque limit.

Note: The effective lower torque limit is reduced with respect to the selected lower torque limit p1521, if the current limit p0640 is reduced or the rated magnetizing current of the induction motor p0320 is increased.

The following applies in the case of VECTOR: This may be the case for rotating measurements (see p1960).

The following applies in the case of VECTOR: Further variable torque limiting is possible (e.g. binector input p1541).

The torque limit p1520 can be re-calculated using p0340 = 1, 3 or 5.

p1540[0...n]	CI: Torque limit speed controller upper scaling / M_max n-ctr upScal		
VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6020, 6060

	Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the signal source for the scaling of the lower torque limiting to limit the speed controller output.

p1545[0...n] BI: Activates travel to a fixed stop / TfS activation

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2520, 3617, 8012
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate/de-activate the "travel to fixed stop" function

1: Travel to fixed stop is active

0: Travel to fixed stop is inactive

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: EPOS uses the parameter (refer to p2686).

When traveling to fixed stop, the fault F07900 "motor blocked" is suppressed.

r1547[0...1] CO: Torque limit for speed controller output / M_max outp n_ctrl

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6060
P-Group: Closed-loop control	**Units group:** 7_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Displays the torque limit to limit the speed controller output.

Index: [0] = Upper limit
[1] = Lower limit

r1548[0...1] CO: Stall current limit torque-generating maximum / Isq_max stall

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the limit for the torque-generating current component using the stall calculation, the current limit of the Motor Module as well as the parameterization in p0640.

Index: [0] = Upper limit
[1] = Lower limit

p1551[0...n] BI: Torque limit variable/fixed signal source / M_lim var/fixS_src

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 5620, 5630, 6060, 6630
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source to change over the torque limits between variable and fixed torque limit.

BI: p1551 = 1 signal:

The variable torque limit applies (fixed torque limit + scaling).

BI: p1551 = 0 signal:

The fixed torque limit applies.

Example:
In order that for a Quick Stop (OFF3) the fixed torque limit is effective, binector input: p1551 must be interconnected to r0899.5.

p1552[0...n] CI: Torque limit upper scaling without offset / M_max up w/o offs

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6060
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the scaling of the upper torque limiting to limit the speed controller output without taking into account the current and power limits.

p1553[0...n] Stall limit scaling / Stall limit scal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
80.0 [%]	130.0 [%]	100.0 [%]

Description: Sets the scaling of the stall limit for the start of field weakening.

Danger: If the stall current limit is increased, then the q current setpoint can exceed the stall limit; as a consequence, a hysteresis effect can occur when loading and unloading.

p1554[0...n] CI: Torque limit lower scaling without offset / M_max low w/o offs

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6060
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the scaling of the lower torque limiting to limit the speed controller output without taking into account the current and power limits.

p1555[0...n] CI: Power limit / P_max

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6640
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** r2004	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the motoring and negative regenerative power limit.

Dependency: Refer to: p1530, p1531

Note: The resulting motoring power limit is the minimum from p1530 and the signal which is read in.
The resulting regenerative power limit is the maximum from p1531 and the negative signal which is read in.

p1556[0...n] Power limit scaling / P_max scal

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6640
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	340.28235E36	0.00

Description: Sets the scaling of the signal source for the motoring and negative regenerative power limit.

0 signifies no power limiting.

p1560[0...n] Moment of inertia estimator accelerating torque threshold value / J_est M thresh

VECTOR_G (J_estimator)

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.10 [%]	100.00 [%]	10.00 [%]

Description: Sets the threshold for the accelerating torque for the moment of inertia estimator.

The moment of inertia estimator is active above this threshold.

The value is referred to the rated torque (r0333).

Dependency: Refer to: p1400, p1561, p1562

Note: The moment of inertia estimation is inaccurate at very low accelerating torques/accelerating forces. As a consequence, below this threshold, the estimator does not provide any new values.

p1561[0...n] Moment of inertia estimator change time moment of inertia / J_est t J

VECTOR_G (J_estimator)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.00 [ms]	5000.00 [ms]	500.00 [ms]

Description: Sets the change time for the moment of inertia for the moment of inertia estimator.

Lower values mean that faster changes are possible.

For a higher value, this estimated value is smoothed more significantly.

Dependency: Refer to: p1400, p1560, p1562

p1562[0...n] Moment of inertia estimator change time load / J_est t load

VECTOR_G (J_estimator)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
5.00 [ms]	5000.00 [ms]	10.00 [ms]

Description: Sets the change time for the load torque/load force for the moment of inertia estimator.

Lower values mean that faster changes are possible.

For a higher value, this estimated value is smoothed more significantly.

Dependency: Refer to: p1400, p1560, p1561

p1563[0...n]	CO: Mom. of inertia estimator load torque direction of rotation pos. / J_est M pos		
VECTOR_G (J_estimator)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -

	Min	**Max**	**Factory setting**
	- [%]	- [%]	- [%]

Description: Displays signals of the open-loop flux control of the closed-loop controlled reluctance motor.

Index:
[0] = Setpoint before filter
[1] = Output MTPC characteristic
[2] = Lower limit at low torque
[3] = Lower limit at low speed
[4] = Upper limit from field weakening controller total
[5] = Upper limit from field weakening controller precontrol

p1569[0...n]	CI: Supplementary torque 3 / M_suppl 3		
VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 7010
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	3841[0]

Description: Sets the signal source for supplementary torque 3.

Dependency: Refer to: p3842

Notice: The signal input is after the torque limit (r1538, r1539). For vector drives, the signals that are entered are only limited by the current and power limits.

Note: The signal input is preferably used to enter the friction characteristic. The friction compensation is also effective if the speed controller output reaches its torque limits, but the current limits have still not been reached (this only applies to vector drives).

p1570[0...n] CO: Flux setpoint / Flex setp

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6722
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
50.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the flux setpoint referred to rated motor flux.

Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.

Note: For p1570 > 100%, the flux setpoint increases as a function of the load from 100% (no-load operation) to the setting in p1570 (above rated motor torque), if p1580 > 0% has been set.

p1571[0...n] CI: Supplementary flux setpoint / Suppl flux setp

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6725
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the supplementary flux setpoint.

Notice: Low flux setpoints can cause the drive to stall at higher loads. This is the reason that the flux setpoint should only be adapted for slow load changes.

Note: The supplementary flux setpoint is limited to +/- 50 %.

p1572[0...n] Supplementary flux setpoint / Suppl flux setp

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6726
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	100.0 [%]	0.0 [%]

Description: Sets the supplementary flux setpoint for the flux controller.

The value is referred to the rated motor flux.

Notice: The parameter should be set back to 0% again for normal closed-loop control operation.

Note: The parameter is used to optimize the flux controller. The current model is not influenced by the setting.

p1573[0...n] Flux threshold value magnetizing / Flux thresh magnet

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6722
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
10.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the flux threshold value for enabling the speed setpoint and the end of magnetizing (r0056.4).

Note: The parameter only has an influence if the flux actual value reaches the threshold value p1573 more quickly during magnetizing than the time set in p0346. This is generally the case when selecting fast magnetization (p1401 bit 6).

The parameter has no influence for flying restart (see p1200) and after DC braking (see p1231).

p1574[0...n] Voltage reserve dynamic / U_reserve dyn

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6723, 6724
P-Group: Closed-loop control	**Units group:** 5_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [Vrms]	150.0 [Vrms]	10.0 [Vrms]

Description: Sets a dynamic voltage reserve.

Note: In the field weakening range, it must be expected that the control dynamic performance is somewhat restricted due to the limited possibilities of controlling/adjusting the voltage. This can be improved by increasing the voltage reserve. Increasing the reserve reduces the steady-state maximum output voltage (r0071).

p1575[0...n] Voltage target value limit / U_tgt val lim

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6725
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
50.00 [%]	200.00 [%]	200.00 [%]

Description: Sets the limit of the voltage target value.

In steady-state field weakening operation this corresponds to the required output voltage.

The value of 100% refers to p0304.

Note: The output voltage is only limited if the maximum output voltage (r0071) minus the voltage reserve (p1574) corresponds to a value higher than p1575.

Limiting via p1575 allows the influence of the voltage ripple of the line supply voltage to be eliminated at the operating point.

p1576[0...n] Flux boost adaptation speed, lower / Flux boost n lower

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6725
P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the lower adaptation speed of the flux boost.

Below this speed, p1570 is set as reference (setpoint) flux.

p1577[0...n] Flux boost adaptation speed upper / Flux boost n upper

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6725
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.0 [%]	10000.0 [%]	200.0 [%]

Description: Sets the upper adaptation speed of the flux boost.

Above this speed, the rated motor flux (100 %) is set as reference (setpoint) flux.

Dependency: The parameter value refers to the lower adaptation speed of the flux boost.

Refer to: p1576

p1580[0...n]	**Efficiency optimization / Efficiency opt.**		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6722
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [%]	100 [%]	0 [%]

Description: Sets the efficiency optimization.
When optimizing the efficiency, the flux setpoint of the closed-loop control is adapted as a function of the load.
For p1580 = 100 %, under no-load operating conditions, the flux setpoint is reduced to 50 % of the rated motor flux.

Note: It only makes sense to activate this function if the dynamic response requirements of the speed controller are low.
In order to avoid oscillations, if required, the speed controller parameters should be adapted (increase Tn, reduce Kp).
Further, the smoothing time of the flux setpoint filter (p1582) should be increased.

p1582[0...n]	**Flux setpoint smoothing time / Flux setp T_smth**		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6722, 6724, 6725
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	4 [ms]	5000 [ms]	15 [ms]

Description: Sets the smoothing time for the flux setpoint.

r1583	**Flux setpoint smoothed / Flux setp smooth**		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6722, 6723, 6724
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [%]	- [%]	- [%]

Description: Displays the smoothed flux setpoint.
The value is referred to the rated motor flux.

p1584[0...n]	**Field weakening operation flux setpoint smoothing time / Field weak T_smth**		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6722
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	20000 [ms]	0 [ms]

Description: Sets the smoothing time for the flux setpoint in the field-weakening range

Recommend.: Smoothing should be especially used if there is no regenerative feedback into the line supply. This means that the DC link voltage can quickly increase in regenerative operation

Note: Only the flux setpoint rise is smoothed

p1585[0...n] Flux actual value smoothing time / Flux actVal T_smth

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6726
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	1000 [ms]	0 [ms]

Description: Sets the smoothing time for the flux actual value.

p1586[0...n] Field weakening characteristic scaling / Field weak scal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
80.0 [%]	120.0 [%]	100.0 [%]

Description: Sets the scaling of the pre-control characteristic for the start of field weakening.

For values above 100 % and for partial load situations, the field weakening starts at higher speeds.

Note: If the start of field weakening is shifted to lower speeds, then the voltage reserve is increased for partial load situations.

If the start of field weakening is shifted to higher speeds, the voltage reserve is appropriately reduced so that for fast load changes, it can be expected that this will have a negative impact on the dynamic performance.

r1589 Field-weakening current pre-control value / I_FieldWeak prectr

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4

Description: Displays the effective flux setpoint.

The value is referred to the rated motor flux.

p1599[0...n]	**Flux controller excitation current difference / Flux ctr I_exc_dif**		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	100.0 [%]	3.0 [%]

Description: Sets the permissible difference between the actual excitation current and the excitation current setpoint.

The excitation current flux controller is active within this difference.

If the difference lies outside the specified limit value, then the I component of the excitation current flux controller is kept. Instead of this, for the flux controller of the field-generating current, an additional I controller is switched in (integral time according to p1592).

If the difference again lies within the bandwidth, the I component of the excitation current flux controller is re-activated and the I component of the flux controller of the field-generating current is reduced as an exponential function with respect to time. The reduction of the I component over time depends on the rotor time constant (r0384).

p1600[0...n]	**P flux controller P gain / P flux ctrl Kp**		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3

Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the stator current setpoint for operation of a separately-excited synchronous motor (FEM) in operating mode I/f (p1300 = 18).

p1610[0...n] Torque setpoint static (sensorless) / M_set static

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6700, 6721, 6722, 6726
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-200.0 [%]	200.0 [%]	50.0 [%]

Description: Sets the static torque setpoint for sensorless vector control.

This parameter is entered as a percentage referred to the rated motor torque (r0333).

For sensorless vector control, when the motor model is shut down, an absolute current is impressed. p1610 represents the maximum load that occurs at a constant setpoint speed.

Notice: p1610 should always be set to at least 10 % higher than the maximum steady-state load that can occur.

Note: For p1610 = 0%, a current setpoint is calculated that corresponds to the no-load case (ASM: rated magnetizing current).

For p1610 = 100 %, a current setpoint is calculated that corresponds to the rated motor torque.

Negative values are converted into positive setpoints in the case of induction and permanent-magnet synchronous motors.

p1611[0...n] Additional acceleration torque (sensorless) / M_suppl_accel

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6700, 6721, 6722, 6726
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	200.0 [%]	30.0 [%]

Description: Enters the dynamic torque setpoint for the low-speed range for sensorless vector control.

This parameter is entered as a percentage referred to the rated motor torque (r0333).

Note: When accelerating and braking p1611 is added to p1610 and the resulting total torque is converted into an appropriate current setpoint and controlled.

For pure accelerating torques, it is always favorable to use the torque pre-control of the speed controller (p1496).

p1612[0...n] Current setpoint magnetizing open-loop controlled / Id_set ctrl

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the magnetizing current setpoint in the open-loop controlled encoderless operation.

The value is only valid during the current model orientation.

Dependency: Refer to: p1610, p1611

Note: The value is effective at speeds less than p1755 and represents a reserve for a possibly existing load torque or torque error in the moment of inertia.

r1614 EMF maximum / EMF max

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6725
	P-Group: Displays, signals	**Units group:** 5_1	**Unit selection:** p0505
	Not for motor type: ASM, PEM, REL	**Scaling:** p2001	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the actual maximum possible electromotive force (EMF) of the separately-excited synchronous motor.

Dependency: The value is the basis for the flux setpoint.

The maximum possible EMF depends on the following factors:

- Actual DC link voltage (r0070).
- Maximum modulation depth (p1803).
- Field-generating and torque-generating current setpoint.

p1616[0...n] Current setpoint smoothing time / I_set T_smooth

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6721, 6722, 6726
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	4 [ms]	10000 [ms]	40 [ms]

Description: Sets the smoothing time for the current/torque setpoint in the open-loop-controlled operating range in the case of sensorless vector control.

Note: This parameter is only effective in the range where current is injected for sensorless vector control.
For permanent magnet synchronous motors, the parameter is effective over the complete speed range.
For induction motors, the current setpoint is calculated from p1610 and p1611 and for separately excited synchronous motors the torque setpoint is calculated from p1610 and p1611.

r1617 CO: Torque setpoint (controlled) / M_set op-loop ctrl

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Torque setpoint for sensorless control of the separately excited synchronous motor in the open-loop-controlled operating range (under p1755 * p1756).

r1618 Current model controller pre-control / I_mod_ctrl prectrl

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PEM, REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the pre-control value of the current model controller.
It involves a magnetizing current in the d-direction.

p1619[0...n] Setpoint/actual value tracking threshold / SetAct track thrsh

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PEM, REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Threshold for setpoint/actual value tracking of the stator current in the q axis of the current model.

p1620[0...n] Stator current minimum / I_stator min

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10000.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the minimum stator current for separately-excited synchronous motors (FEM).
A negative value means that the field-generating stator current (d-axis) has a negative sign. The valid value is internally limited to 50% of the rated motor current (p0305).

p1621[0...n] Changeover speed inner cos phi = 1 / n_chngov cos phi=1

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the speed where a change is made from the inner to the outer cos phi = 1.

If the value that is entered exceeds the rated speed, then a change is made to the inner cos phi = 1 over the complete speed range.

p1622[0...n] Field-generating current setpoint smoothing time constant / Id_setp T_smth

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [ms]	200.0 [ms]	20.0 [ms]

Description: Sets the smoothing time constant for the setpoint of the field-generating current components.

The current filtered in this way is included in the calculation of the cos phi.

r1623[0...1] Field-generating current setpoint (steady-state) / Id_set stationary

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6723, 6726, 6727
P-Group: Displays, signals	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: PEM, REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the steady-state field generating current setpoint (Id_set).

Note: Re index 1:

Displays the stationary field-generating current on the stator side in the case of separately excited synchronous motors without the excitation current monitoring component (r1644).

r1624 Field-generating current setpoint total / Id_setp total

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6640, 6721, 6723, 6727
P-Group: Displays, signals	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the limited field-generating current setpoint (Id_set).

This value comprises the steady-state field-generating current setpoint r1623 and a dynamic component that is only set when changes are made to the flux setpoint.

p1625[0...n] Excitation current setpoint calibration / I_exc_setp cal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the gain factor to weight the excitation current setpoint.

r1626	CO: Excitation current setpoint / I_exc_setp		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL	**Scaling:** PERCENT	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [%]	- [%]	- [%]

Description: Displays the calculated excitation current setpoint.

Dependency: Refer to: p0390

r1627	CO: Current model load angle / I_mod load angle		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL	**Scaling:** p2005	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°]	- [°]	- [°]

Description: Displays the load angle of the current model.

p1628[0...n]	Current model controller dynamic factor / I_mod_ctr dyn_fact		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1 [%]	400 [%]	50 [%]

Description: Sets the dynamic response factor for the current model controller.

p1629[0...n]	Current model controller P gain / I_mod_ctrl Kp		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000	100000.000	0.000

Description: Sets the proportional gain for the current model controller.
This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.

p1630[0...n]	Current model controller integral time / I_mod_ctrl Tn		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -

	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.1 [%]	50.0 [%]	5.0 [%]

Description: Sets the minimum excitation current.
This means that negative excitation currents can be avoided.

p1643[0...n]	**Minimum excitation current closed-loop control gain factor / I_exc_min Kp**		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00	5.00	0.40

Description: Sets the gain factor for the minimum excitation current, closed-loop control.
This is active if the excitation current is below 75 % of p1642.

Dependency: Refer to: p1642

r1644	**CO: Excitation current monitoring output / I_exc_monit outp**		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
	P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PEM, REL	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the output of the excitation current monitoring for separately excited synchronous motors.

p1645[0...7]	**BI: Excitation feedback signals signal source / Exc FS S_src**		
VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 6495
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	[0...6] 1 [7] 0

Description: Sets the signal source for the individual feedback signals from the excitation.

Index: [0] = Excitation ready to be powered up
[1] = Excitation ready
[2] = Excitation operational
[3] = Excitation group signal fault
[4] = Excitation group signal alarm
[5] = Not used
[6] = Not used
[7] = Excitation at the voltage limit

Dependency: Refer to: r1649

p1646 Excitation monitoring time / Excit t_monit

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6495
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
2.0 [s]	1300.0 [s]	20.0 [s]

Description: Sets the monitoring time of the excitation.

After an ON command, the feedback signal must be received within this monitoring time.

Note: After the on command for the excitation (r1648.0 = 1), its feedback signal must be available at r1649.1 within this monitoring time (BI: p1645[1]).

The same monitoring time is effective after the excitation is enabled for operation (r1648.3 = 1) up to the feedback signal "excitation operational" (r1649.2 = 1, BI: p1645[2]).

p1647 Excitation switch-off delay time / Exc t_off

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6495
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	5.0 [s]	0.8 [s]

Description: Sets the switch-off delay time to shut down the excitation equipment.

Note: The delay time starts if, when powering down, r0863.0 = 0.

r1648.0 and r1648.3 are reset at the end of the delay time.

r1648.0...11 CO/BO: Excitation control word / Excitation STW

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 6495
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the control word for the excitation equipment.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Power up excitation	Yes	No	-
01	Excitation no OFF2	Yes	No	-
02	Excitation no OFF3	Yes	No	-
03	Excitation operation enable	Yes	No	-
07	Excitation acknowledge fault	Yes	No	-
10	Master control by excitation equipment	Yes	No	-
11	ccw rotating field excitation invert excitation current setpoint	Yes	No	-

Note: Re bit 00:

This bit is set dependent on r0863.0.

r1649.0...8 CO/BO: Excitation status word / Excitation ZSW

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 6495
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status word of the excitation equipment.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Excitation ready to be powered up feedback signal	Yes	No	-
01	Excitation ready feedback signal	Yes	No	-
02	Excitation operational feedback signal	Yes	No	-
03	Excitation group signal fault	Yes	No	-
07	Excitation group signal alarm	Yes	No	-
08	Excitation at the voltage limit	Yes	No	-

Dependency: Refer to: p1645

r1650 Current setpoint torque-generating before filter / Iq_set before filt

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5710
P-Group: Closed-loop control	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the torque generating current setpoint Iqset after the torque limits and the clock cycle interpolation is ahead of the current setpoint filters.

r1651 CO: Torque setpoint function generator / M_set FG

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** 7_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Displays the torque setpoint of the function generator.

p1653[0...n] Current setpoint torque-generating smoothing time minimum / Isq_s T_smth min

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6710
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [ms]	20.0 [ms]	0.1 [ms]

Description: Sets the minimum smoothing time constant for the setpoint of the torque-generating current components.

p1654[0...n] Curr. setpoint torque-gen. smoothing time field weakening range / Isq_s T_smth FW

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6710
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [ms]	50.0 [ms]	4.8 [ms]

Description: Sets the smoothing time constant for the setpoint of the torque-generating current components.

Note: The smoothing time does not become effective until the field-weakening range is reached.

p1655[0...4] CI: Current setpoint/Speed actual value filter nat. frequency tuning / I/n_setp_filt f_n

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6700, 6710
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for tuning the natural frequency of the current setpoint filter 1, 2 and speed actual value filter 5.

Index:
[0] = Filter 1
[1] = Filter 2
[2] = Reserved
[3] = Reserved
[4] = Filter 5

p1656[0...n] Current setpoint/Speed actual value filter activation / I_setp_filt act

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4715, 6710
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0001 bin

Description: Setting for activating/de-activating the current setpoint filter 1, 2 and speed actual value filter 5.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Filter 1	Active	Inactive	-
01	Filter 2	Active	Inactive	-
04	Filter 5	Active	Inactive	-

Dependency: The individual current setpoint/speed actual value filters are parameterized starting at p1657.

Note: If not all of the filters are required, then the filters should be used consecutively starting from filter 1.

p1657[0...n] Current setpoint filter 1 type / I_set_filt 1 type

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 5710, 6710
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	1

Description: Sets the current setpoint filter 1 as low pass (PT2) or general 2nd-order filter.

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

Note: For a general 2nd-order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:
f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

p1658[0...n] Current setpoint filter 1 denominator natural frequency / I_set_filt 1 fn_d

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5710, 6710
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description: Sets the denominator natural frequency for current setpoint filter 1 (PT2, general filter).

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1659[0...n] Current setpoint filter 1 denominator damping / I_set_filt 1 D_d

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5710, 6710
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.001	10.000	0.700

Description: Sets the denominator damping for current setpoint filter 1.

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1660[0...n] Current setpoint filter 1 numerator natural frequency / I_set_filt 1 fn_n

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5710, 6710
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description: Sets the numerator natural frequency for current setpoint filter 1 (general filter).

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1661[0...n] Current setpoint filter 1 numerator damping / I_set_filt 1 D_n

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5710, 6710
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	10.000	0.700

Description: Sets the numerator damping for current setpoint filter 1.

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1662[0...n] Current setpoint filter 2 type / I_set_filt 2 type

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 5710, 6710
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	1

Description: Sets the current setpoint filter 2 as low pass (PT2) or general 2nd-order filter.

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: Current setpoint filter 2 is activated via p1656.1 and parameterized via p1662 ... p1666.

Note: For a general 2nd-order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

p1663[0...n] Current setpoint filter 2 denominator natural frequency / I_set_filt 2 fn_d

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5710, 6710

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	10.000	0.700

Description: Sets the numerator damping for speed actual value filter 5.

Dependency: The speed actual value filter is activated via p1656.4 and parameterized via p1677 ... p1681.

p1699 Filter data acceptance / Filt data accept

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Activates data acceptance for parameter changes for the filter.

p1699 = 0:

The new filter data are immediately accepted.

p1699 = 1:

The new filter data are only accepted when this parameter is reset.

Dependency: Speed setpoint filter 1, 2 (p1414 and following)

Current setpoint filter 1 ... 4 (p1656 and following)

Current setpoint filter 5 ... 10 (function module, p5200 and following)

Refer to: p1656

p1702[0...n] Isd current controller pre-control scaling / Isd_ctr_prectrScal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6714
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	200.0 [%]	70.0 [%]

Description: Sets the scaling of the dynamic current controller pre-control for the flux-generating current component Isd.

Note: The parameter is effective for permanent and separately-excited synchronous motors.

p1703[0...n] Isq current controller pre-control scaling / Isq_ctr_prectrScal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6714
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	200.0 [%]	70.0 [%]

Description: Sets the scaling of the dynamic current controller pre-control for the torque/force-generating current component Isq.

p1704[0...n] Isq current controller pre-control EMF scaling / Isq_ctrl EMF scal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6714, 6726
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the scaling of the EMF pre-control for the Isq current controller.

p1705[0...n] Flux setpoint/actual value tracking threshold / Flux track thresh

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6714, 6726
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	100.0 [%]	100.0 [%]

Description: Threshold for the setpoint - actual value tracking of the EMF pre-control of the Isq current controller.

p1715[0...n] Current controller P gain / I_ctrl Kp

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6700, 6714, 7017
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	100000.000	0.000

Description: Sets the proportional gain of the current controller for the lower adaptation current range.
This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.

Dependency: Refer to: p0391, p0392, p0393

Note: For p0393 = 100 %, the current controller adaptation is disabled and p1715 is effective over the entire range.

p1717[0...n] Current controller integral-action time / I_ctrl Tn

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5714, 6700, 6714, 7017
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	1000.00 [ms]	2.00 [ms]

Description: Sets the integral-action time of the current controller.

Dependency: Refer to: p1715

r1718 CO: Isq controller output / Isq_ctrl outp

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6714
P-Group: Closed-loop control	**Units group:** 5_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the actual output of the Isq current controller (torque/force generating current, PI controller).
The value contains the proportional and integral components of the PI controller.

r1719	**Isq controller integral component / Isq_ctrl I_comp**		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4

	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	200.0 [%]	75.0 [%]

Description: Sets the scaling of the quadrature arm decoupling

Note: This parameter is ineffective for sensorless vector control. In this case, p1727 is always used. If p1726 is set to 0, then the quadrature de-coupling is de-activated. The integral component of the Isd current controller remains effective in the complete speed control range.
For the closed-loop control of synchronous motors, this parameter is used to scale the current controller de-coupling.

p1727[0...n] Quadrature arm decoupling at voltage limit scaling / TrnsvDecplVmaxScal

VECTOR_G (n/M)

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	10.000	0.025

Description: Defines the gain of the controller for resonance damping for operation with sensorless vector control in the range that current is injected.

p1744[0...n] Motor model speed threshold stall detection / MotMod n_thr stall

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	100.00 [rpm]

Description: Sets the speed threshold value to detect a stalled motor.

If the adaptation controller output exceeds the parameterized speed difference, then in status word r1408.11 is set = 1.

Dependency: If a stalled drive is detected (r1408.11 = 1), fault F07902 is output after the delay time set in p2178.

Refer to: p2178

Note: Speed monitoring is only effective in operation with a speed encoder (refer to p1300).

Stalling is also identified if steps/jumps occur in the speed signal, which exceed the value in p0492.

p1745[0...n] Motor model error threshold stall detection / MotMod ThreshStall

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	1000.0 [%]	5.0 [%]

Description: Sets the fault threshold in order to detect a motor that has stalled.

If the error signal (r1746) exceeds the parameterized error threshold, then status signal r1408.12 is set to 1.

Dependency: If a stalled drive is detected (r1408.12 = 1), fault F07902 is output after the delay time set in p2178.

Refer to: p2178

Note: Monitoring is only effective in the low-speed range (below p1755 * (100% - p1756)).

r1746 Motor model error signal stall detection / MotMod sig stall

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Signal to initiate stall detection

Note: The signal is not calculated while magnetizing and only in the low speed range (below p1755 * (100 % - p1756)).

p1748[0...n] Motor model lower changeover speed n_set -> n_act / MotMod low n_chng

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	90.0 [%]	50.0 [%]

Description: Sets the lower speed for the transition "n_set -> n_act" in encoderless operation.

This value is entered as a percentage referred to p1749.

Dependency: Refer to: p1749, p1752

p1749[0...n] Motor model upper changeover speed / increase changeover speed / Up/incr n_chngov

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	99.0 [%]	50.0 [%]

Description: Separately-excited synchronous motor:

Sets the upper speed for the transition "n_set -> n_act" in sensorless operation.

This value is entered as a percentage of p1755.

Induction motor without speed encoder:

Depending on the machine data, the drive has calculated a minimum value of the operating frequency for rugged operation.

If the minimum value is greater than the lower changeover limit parameterized with p1755 * (1 - 2 * p1756), then the difference is displayed using p1749 * p1755. The parameter value cannot be changed.

Dependency: Refer to: p1748, p1752, p1755, p1756

p1750[0...n]	**Motor model configuration / MotMod config**		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0000 0000 bin

Description: Sets the configuration for the motor model.

Bit 0 = 1: Forces open-loop speed-controlled starting (ASM).

Bit 1 = 1: Forces the system to pass through frequency zero, open-loop-controlled (ASM).

Bit 2 = 1: Drive remains in full closed-loop control mode, even at zero frequency (ASM).

Bit 3 = 1: Motor model evaluates the saturation characteristic (ASM).

Bit 4 = 1: Time-controlled change between current and observer models (ASM).

Bit 5 = 1: HF signal injection to estimate the continuous rotor position (PESM).

Bit 6 = 1: If the motor is blocked, sensorless vector control remains speed-controlled (ASM).

For a stalled (blocked) synchronous motor (PEM), the encoderless vector control remains open-loop speed controlled.

Bit 7 = 1: Use rugged switchover limits to switchover the model between open-loop and closed-loop controlled operation (ASM).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Controlled start	Yes	No	-
01	Controlled through 0 Hz	Yes	No	-
02	Closed-loop ctrl oper. down to zero freq. for passive loads	Yes	No	-
03	Motor model Lh_pre = f(PsiEst)	Yes	No	-
04	Model changeover	Time controlled	Freq. controlled	-
05	Cl.-loop control mode PESM up to f=0Hz with HF signal injection	Yes	No	-
06	Closed-loop/open-loop controlled (PEM) for blocked motor	Yes	No	-
07	Use rugged changeover limits	Yes	No	-

Caution: Do not use bit 6 = 1 if the motor can be slowly reversed by the load at the torque limit. Long delay times due to blocking (p2177 > p1758) can cause the motor to stall. In this case you should de-activate the function or use closed-loop control throughout the speed range (note the information re bit 2 = 1).

Note: Bit 0 ... 3 only have influence for sensorless vector control, bit 4 only for vector control with encoder. Bit 2 is pre-assigned depending on p0500.

Re bit 2 = 1:

The sensorless vector control is effective down to zero frequency. A change is not made into the open-loop speed controlled mode.

This operating mode is possible for passive loads. These include applications where the load itself does not generate any active torque and therefore only acts reactively to the drive torque of the induction motor.

If bit 2 = 1, then bit 3 is automatically set to 1. Manual de-selection is possible and may be sensible if the saturation characteristic (p1960) was not measured for third-party motors. Generally, for standard SIEMENS motors, the already pre-assigned (default value) saturation characteristic is adequate.

When the bit is set, the selection of bits 0 and 1 is ignored.

Re bit 2 = 0:

If the model feedback is deactivated (p1784 = 0), with bit 2 = 0, then bit 3 is also automatically set to 0.

Re bit 5 = 1:

The selection of HF signal injection is only relevant for permanent-magnet synchronous motors (PESM). Therefore, activation of bit 5 is only possible outside of motor commissioning (p0010 = 0).

In order to achieve user-friendly configuration of the power unit components in the oversampling mode, when activated for the first time, initially p1810.3 is set, and then an automatic system boot is initiated. This is only possible if all of the axes connected to the Control Unit are switched off (refer to the setting conditions for p0009); otherwise, it is not possible to set the bit.

When deactivating p1750.5, p1810.3 remains unchanged and the system does not boot again.

Therefore, to reverse configure the power unit components from the oversampling mode (after manually deselecting p1750 bit 5) then initially p1810 bit 3 must be manually deleted and then a manual warm restart initiated.

As an alternative to a warm restart: save the parameters and carry out a POWER ON (switch-off/switch-on).

When the function "safety without encoder" (p9306/p9506) is activated, this setting is not permissible and results in monitoring errors.

Re bit 6 = 1:

The following applies for encoderless vector control of induction motors:

For a blocked motor (see p2175, p2177) the time condition in p1758 is bypassed and a change is not made into open-loop controlled operation.

The following applies for encoderless vector control of synchronous motors:

For a blocked motor (see p2175, p2177), the speed ramp-function generator is held in open-loop speed controlled operation, and a change is not made into closed-loop controlled operation.

Re bit 7 = 1:

The following applies for encoderless vector control of induction motors:

If the changeover limits are parameterized too low (p1755, p1756), then they are automatically increased to rugged values by the absolute amount p1749 * p1755.

The effective time condition for changing over into open-controlled operation is obtained from the minimum of p1758 and 0.5 * r0384.

Activation can make sense for applications that demand a high torque at low frequencies and therefore low speed gradients.

Adequate parameterization must be ensured (p1610, p1611).

r1751 Motor model status / MotMod status

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of the motor model.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Controlled operation	Active	Inactive	6721
01	Set ramp-function generator	Active	Inactive	-
02	Stop RsLh adaptation	Yes	No	-
03	Feedback	Active	Inactive	-
04	Encoder operation	Active	Inactive	-
05	Holding angle	Yes	No	-
06	Acceleration criterion	Active	Inactive	-
07	Set angular integrator PEM	Yes	No	-
08	Stop Kt adaptation PEM	Yes	No	-
09	PolID active PEM sensorless	Yes	No	-
10	I injection PEM	Yes	No	-
11	Speed controller output cannot be set to zero	Yes	No	-
12	Rs adapt waits	Yes	No	-
13	Motor operation	Yes	No	-
14	Stator frequency sign	Positive	Negative	-
15	Torque sign	Motor mode	Regenerative mode	-
16	Pulse injection active PEM	Yes	No	-
17	Operation with rugged model feedback	Enabled	Inhibited	-
18	Operation of the current model with current feedback	Enabled	Inhibited	-
19	Current feedback in the current model	Active	Inactive	-
20	Rugged increase of the changeover limits	Active	Inactive	-
21	Motor blocked (RFG stop) PEM	No	Yes	-

Note: Re bit 17:

Displays the status when enabling the rugged model feedback (p1784) for operation with and without encoder.

The feedback is used to increase the parameter ruggedness of the motor model and is effective in the operating range of the two-component closed loop current control.

Re bit 18:

Displays the status when enabling the differential current feedback in the current model for operation with encoder.

The function is automatically enabled with p1784 > 0 or p1731 > 0. The feedback is used for a rugged change between the current model and complete machine model with active rugged model feedback and combination current.

Re bit 19:

Displays the currently active stator circuit feedback in current model operation.

Re bit 20:

Displays the currently effective increase of the changeover limits by the value p1749 * p1755.

Re bit 21:

For a blocked synchronous motor, the speed ramp-function generator is held in the open-loop speed controlled operating range if the torque setpoint reaches the torque limit and the speed is less than the threshold value in p2175.

p1752[0...n] Motor model changeover speed operation with encoder / MotMod n_chgov enc

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]

Description: Sets the speed to change over the motor model for operation with encoder.

Dependency: In U/f characteristic mode the parameter is of no significance.

Using the friction characteristic for operation with encoder:

When changing the motor model changeover speed p1752, the points along the friction characteristic should be recalculated (p0340 = 5) and the friction characteristic recorded again (p3845). For slight changes, only the associated friction characteristic points must be recorded (see p3844).

Refer to: p1756

p1753[0...n] Motor model changeover speed hysteresis operation with encoder / MotMod n_chgovHysE

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	90.0 [%]	0.0 [%]

Description: Sets the hysteresis for the changeover speed of the motor model for operation with speed encoder.

Dependency: Refer to: p1752

Note: The value refers to p1752. In the case of separately excited synchronous motors, the lower hysteresis value is calculated with p1752 * p1753; in the case of all other types of motor, p1752 * (1 - p1753) is used.

p1754[0...n] Flux angle difference smoothing time / Angle diff T_smth

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6733
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [ms]	10000.0 [ms]	5.0 [ms]

Description: Sets the smoothing time constant to filter the main flux angle difference from the voltage and current models.

The filtered value is included in the calculation of the total flux angle.

PESM: Sets the smoothing time constant for the angular difference display between motor model and encoder.

Note: In the case of a separately excited synchronous motor and sensorless vector control, the parameter must be set to the minimum value to improve motor model changeover.

p1755[0...n]	Motor model changeover speed encoderless operation / MotMod n_chgSnsorl		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]

Description: Sets the speed to change over the motor model to encoderless operation.

Dependency: In U/f characteristic mode the parameter is of no significance.

Refer to: p1749, p1756

Notice: The changeover speed represents the steady-state minimum speed up to which the motor model can be used in sensorless steady-state operation.

If the stability is not adequate close to the changeover speed, it may make sense to increase the parameter value.

Note: The changeover speed applies for the changeover between open-loop and closed-loop control mode.

p1756	Motor model changeover speed hysteresis encoderless operation / MotMod n_chgov hys		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6730, 6731, 6732, 6733
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	95.0 [%]	50.0 [%]

Description: Sets the hysteresis for the changeover speed of the motor model for encoderless operation. In the case of separately excited synchronous motors, the lower hysteresis value is calculated with p1756 * p1755; in the case of all other types of motor, p1755 * (1 - p1756) is used.

Dependency: In U/f characteristic mode the parameter is of no significance.

Refer to: p1755

Note: The parameter value refers to p1755.

In the case of separately excited synchronous motors, the lower hysteresis value is calculated with p1755 * p1756; in the case of all other types of motor, p1755 * (1 - p1756) is used.

p1757[0...n]	Motor model w/o enc. op./cl.-loop controlled stab. controller Kp / MotMod w/o enc Kp		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.01	10.00	0.70

Description: Sets the gain of the transient response controller when the motor model changes over from open-loop controlled operation to closed-loop controlled operation.

Note: Only for ASM and PSM in encoderless operation:

The settling range starts at 0.5 * p1755 * p1756.

For ASM it ends at p1755 * p1756 or at p1755, if p1759 is at the maximum value.

For PSM it always ends at p1755 * p1756.

p1758[0...n]	Motor model changeover delay time closed/open-loop control / MotMod t cl_op		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -

	Min	**Max**	**Factory setting**
	100 [ms]	10000 [ms]	1000 [ms]

Description: Sets the minimum time for falling below the changeover speed when changing from closed-loop controlled operation to open-loop controlled operation.

Dependency: The wait time has no significance if the setpoint speed before the ramp-function generator lies in the open-loop speed controlled operating range. In this case, the change is made without any delay.

Refer to: p1755, p1756

Note: If p1758 is changed, commissioning must be selected in order to validate the value for the blocking monitoring.

p1759[0...n]	Motor model changeover delay time open/closed-loop control / MotMod t op_cl		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	2000 [ms]	0 [ms]

Description: Sets the minimum time for a transition from open-loop controlled to closed-loop controlled operation after the lower changeover speed p1755 * (1 - p1756 / 100 %) has been exceeded.

Dependency: Refer to: p1755, p1756

Note: With p1759 = 2000 ms, the delay time becomes ineffective and the model changeover is determined by the output frequency only (changeover for p1755).

p1760[0...n]	Motor model with encoder speed adaptation Kp / MotMod wE n_ada Kp		
VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3

	Min	**Max**	**Factory setting**
	-5.000 [V]	5.000 [V]	0.000 [V]

Description: Sets the offset voltage in the beta direction; this compensates the offset voltages of the drive converter/inverter at low speeds. The value is valid for the rated (nominal) pulse frequency of the power unit.

Note: The value is pre-set during the rotating measurement.

r1776[0...6]	Motor model status signals / MotMod status sig		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the internal status signals of the motor model:

Index 0: Changeover ramp between current and voltage models

Index 1: Changeover ramp for model tracking (encoderless induction motors only)

Index 2: Changeover ramp for zero frequency range (encoderless induction motors only)

Index 3: Transition ramp actual speed from speed setpoint to model value (encoderless FEM)

Index 4: Speed controller enable (encoderless FEM)

Index 5: Transition ramp between current and voltage models (encoderless FEM)

Index 6: Transition ramp for EMF deviation at PLL input (encoderless PESM)

Index: [0] = Changeover ramp motor model
[1] = Changeover ramp model tracking
[2] = Changeover ramp zero frequency encoderless ASM
[3] = Changeover ramp actual speed encoderless FEM
[4] = Enable speed controller encoderless FEM
[5] = Changeover ramp motor model encoderless FEM
[6] = Changeover ramp motor model encoderless PESM

Note: Indices 3 through 5 are only relevant in the case of encoderless control of separately excited synchronous motors.

r1778 Motor model flux angle difference / MotMod ang diff

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

Not for motor type: REL	**Scaling:** p2005	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°]	- [°]	- [°]

Description: Induction motor (ASM):
Displays the difference between the motor model flux angle and the transformation angle.
Permanent-magnet synchronous motor (PESM):
Displays the angular difference between motor model and encoder.

Dependency: A setting for smoothing the display can be made using p1754.

r1779 Motor model absolute flux / MotMod abs flux

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL, FEM	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the absolute value of the flux of the motor model.

p1780[0...n] Motor model adaptation configuration / MotMod adapt conf

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0111 1100 bin

Description: Sets the configuration for the adaptation circuit of the motor model.
Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation.
Permanent magnet synchronous motor (PEM): kT

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Select motor model ASM Rs adaptation	Yes	No	-
02	Select motor model ASM Lh adaptation	Yes	No	-
03	Select motor model PEM kT adaptation	Yes	No	-
04	Select motor model offset adaptation	Yes	No	-
05	Select ASM Rr adaptation (only with encoder)	Yes	No	-
06	Select pole position identification PEM encoderless	Yes	No	-
07	Select T(valve) with Rs adaptation	Yes	No	-
10	Filter time combination current like current ctrl integral time	Yes	No	-
11	Fast flying restart with voltage model for induction motor	Yes	No	-
12	Start PEM sensorless with last angle	Yes	No	-

13	Fast pulsed pole position identification	Yes	No	-
14	Delay of the precontrol speed to the motor model	Yes	No	-
15	RESM: Linear Q flux model	active	not active	-

Dependency: In U/f characteristic operating mode, only bit 7 and bit 11 are relevant.

For active motor model feedback (see p1784), the Lh adaptation is internally deactivated automatically.

When the power units are connected in parallel with separate, offset motor winding systems (p7003 = 2), then the compensation of the valve interlocking times should be implemented as Rs adaptation (bit 7 = 1).

Caution: Bit 11: The selection has not been enabled for output filters, with the exception of motor reactors (see p0230)

Notice: It is only permissible to change bit 11 if the drive is switched off.

When selecting bit 11, also for U/f characteristic operation, a standstill measurement must have been performed to set the necessary current controller for a fast flying restart.

Note: ASM: Induction motor

PEM: Permanent magnet synchronous motor

When selecting the compensation of the valve interlocking via Rs (bit 7), the compensation in the gating unit is deactivated and is instead taken into account in the motor model.

In order that the correction values of the Rs, Lh and kT adaptation (selected using Bit 0 ... Bit 2) are correctly accepted when changing over the drive data set, a dedicated motor number must be entered into p0826 for each different motor.

Bit 11 has no influence on flying restart with speed encoder. Depending on the motor, the fast flying restart is suitable for speeds of maximum 1.5x to 4x the rated motor speed.

Re bit 12 (only for synchronous motors and bit 6 = 1):

The pole position identification is only carried out after power on and after the motor has coasted down. The switch-off speed p1226 should be as low as possible. If the power unit is switched off when the motor is stationary, then the next time that the power unit is switched on, the old angle is used. The precondition applies that while the power unit is switched off the motor does not rotate.

The duration of the pole position identification is shortened using bit 13. As a consequence, the pole wheel angle error can be slightly greater.

p1784[0...n] Motor model feedback scaling / MotMod fdbk scal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	1000.0 [%]	0.0 [%]

Description: Sets the scaling for model fault feedback.

Note: Feeding back the measured model fault to the model states increases the control stability and makes the motor model rugged against parameter errors.

When feedback is selected (p1784 > 0), Lh adaptation is not effective.

p1785[0...n] Motor model Lh adaptation Kp / MotMod Lh Kp

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -

- [Nm/A]	- [Nm/A]	- [Nm/A]

Description: Displays the corrective value of the kT adaptation of the motor model for a permanent-magnet synchronous motor (PEM).

Dependency: Refer to: p0826, p1780

Note: The display of the inactive data sets is only updated when changing over the data set.

p1798[0...n] Motor model pulse technique speed adaptation Kp / MotMod PulsTech Kp

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	1000.000	1.000

Description: Sets the proportional gain Kp for speed adaptation with active pulse technique for the estimation of the continuous rotor position.

p1800[0...n] Pulse frequency setpoint / Pulse freq setp

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8014
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.000 [kHz]	16.000 [kHz]	4.000 [kHz]

Description: Sets the pulse frequency for the converter.

This parameter is pre-set to the rated converter value when the drive is first commissioned.

Dependency: The pulse frequency can, depending on the current controller sampling time (p0115[0]) assume the following values:

p1800 = 1000 / (p0115[0] * 2)

or

p1800 = n * 1000 / p0115[0] with n = 1, 2, 3, ...

Example:

p0115[0] = 250 µs --> p1800 = 2, 4, 8, 12, 16 kHz

Possible setting values can be taken from r0114 (if p0009 = p0010 = 0).

If p0092 = 1 the sampling times p0115 and the pulse frequency p1800 are checked every time the parameters are downloaded, and reset to the initial values if necessary. This check can be de-activated by setting p0092 = 0 (making this setting does not affect isochronous PROFIBUS operation).

If the pulse frequency is set asynchronously to the current controller clock cycle (p1810.12),

then the following limit applies:

p1800 <= 1000 * 2 / p0115[0]

If wobbulation is selected (p1810.2), the pulse frequency can only be changed as part of pulse enabling to values with the following ratio:

a) p1800 <= 1000 / p0115[0] for p1811 > 0 %

b) p1800 <= 1000 * 2 / p0115[0] for p 1811 = 0 %

Under pulse inhibit

p1800 > 1000 / p0115[0] -> p1811 = 0

p1800 > 1000 * 2 / p0115[0] -> 1810.2 = 0 and p1811 = 0

(applicable for all indices)

Refer to: r0110, r0111, p0112, p0113, r0114, p0115, p0230, p1817

Notice: The pulse frequency p1800 can also be asynchronously set to the current controller clock cycle (0.05 kHz increment). To do this, p1810.12 must be set to 1 (secondary condition, see p1810).

Effects:

- switching over the gating unit (p1810.2).
- activating the current actual value correction (p1840.0).
- minimum pulse frequency 1000 * 0.5 / p0115[0].
- maximum pulse frequency 1000 * 2 / p0115[0].
- fluctuating deadtimes and dynamic performance in the current control loop.
- increased level of current ripple in the current display.

Note: The maximum possible pulse frequency is also determined by the power unit being used.

When the pulse frequency is increased, depending on the particular power unit, the maximum output current can be reduced (derating, refer to r0067).

The maximum pulse frequency for operation with output reactors (see p0230) is 4 kHz for booksize and blocksize power units, for chassis power units it is twice the rated pulse frequency (2.5 kHz or 4 kHz).

If a sine-wave filter is parameterized as output filter (p0230 = 3), then the pulse frequency cannot be set below the minimum value required for the filter. If an external sine-wave filter is parameterized, (p0230 = 4), then the minimum pulse frequency is calculated as follows:

f_puls_min = 1.6 / (2 * Pi * root(p0233 * p0234 * p0235)), with p0233 in H and p0234 in F

In this case, the pulse frequency must be a multiple of the inverse value of the current controller sampling time (p0115[0]).

If a sine-wave filter is parameterized as output filter (p0230 = 3), then the pulse frequency cannot be changed below the minimum value required for the filter.

If p1800 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1800 have been changed by a parameter that was set when the drive was commissioned (e.g. p1082).

r1801[0...1] CO: Pulse frequency / Pulse frequency

VECTOR_G			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [kHz]	- [kHz]	- [kHz]

Description: Display and connector output for the actual converter switching frequency.

Index:
[0] = Actual
[1] = Modulator minimum value

Note: The selected pulse frequency (p1800) may be reduced if the drive converter has an overload condition (p0290).

The following applies for vector drives (p0107):

The pulse frequency can also be reduced when changing over the modulator to an optimized pulse pattern. This is used to avoid overcontrol.

In the case of chassis power units, two-thirds of the setpoint pulse frequency is displayed in the FLB modulation range.

p1802[0...n] Modulator mode / Modulator mode

VECTOR_G			
	Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	19	0

Description: Sets the modulator mode.

Value:
0: Automatic changeover SVM/FLB
1: Flat top modulation (FLB)
2: Space vector modulation (SVM)
3: SVM without overcontrol
4: SVM/FLB without overcontrol

5: SVM with pulse frequency reduction
6: SVM/FLB with pulse frequency reduction
7: No edge modulation up to 100 Hz
8: No edge modulation up to 60 Hz
9: Edge modulation
19: Optimized pulse pattern

Dependency: If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), or if the power unit firmware is not able to calculate edge modulation (r0192.0 = 0), then only space vector modulation without overcontrol can be set as modulation type (p1802 = 3).

For permanent-magnet synchronous motors and chassis power units, the following applies:

Edge modulation or optimized pulse pattern can only be used, if p1810 bit 2 = 1 is set.

Refer to: r0192, p0230, p7003

Notice: If the pulse patterns are enabled with overmodulation option (p1802 < 3) or edge modulation (p1802 > 6), then the current actual value correction is automatically activated (p1840.0 = 0).

Note: When modulation modes are enabled that could lead to overmodulation (p1802 = 0, 1, 2, 5, 6), the modulation depth must be limited using p1803 (default p1803 < 100 %). The higher the overmodulation, the greater the current ripple and torque ripple.

When changing p1802[x], the values for all of the other existing indices are also changed.

p1802 = 7, 8 should be used if the drive is operated below 100 Hz or 60 Hz, and it is necessary to avoid changing over to edge modulation. Above these output frequencies, the modulation depth remains limited so that there the full output voltage of the edge modulation is not reached.

The setting p1802 = 19 is only released for chassis power units and SIMOTICS FD motors.

p1803[0...n] Maximum modulation depth / Modulat depth max

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6723
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	20.0 [%]	150.0 [%]	100.0 [%]

Description: Defines the maximum modulation depth.

Note: p1803 = 100% is the overcontrol limit for space vector modulation (for an ideal drive converter without any switching delay).

If an optimized pulse pattern is enabled (edge modulation), then the modulation depth is limited to below the output frequency of 28 Hz as there is no optimized pulse pattern in this range.

p1804[0...n] Filter time constant smoothed modulation index / T_filt mod_idxSmth

8: Edge modulation from 100 Hz; 9:1
9: Optimized pulse pattern

p1810	Modulator configuration / Modulator config		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0000 0000 0000 0010 bin

Description: Sets the configuration for the modulator.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Avg value filter for U_lim (only for Vdc_comp. in modulator)	Yes	No	-
01	DC link voltage compensation in the current control	Yes	No	-
02	Wobbulation activated	Yes	No	-
03	Current measurement oversampling selected	Yes	No	-
08	Pulse frequency reduction (speed dependent) stage 1	Yes	No	-

09	Pulse frequency reduction (speed dependent) stage 2	Yes	No	-
10	Activate pulse-locking/pulse-dropping function	Pulse-Dropping	Pulse-Locking	-
12	Pulse freq. can be asynchronously set to curr. ctrl clock cycle	Yes	No	-
13	Pulse freq. reduction before optimized pulse patterns for 500 µs	Yes	No	-
14	Deactivate maximum angular difference adaptation	Yes	No	-
15	Increase overmodulation range	Yes	No	-

Dependency: If bit 2 is set from 1 to 0, p1811 = 0 is set.

Notice: Bit 1 = 0 can only be set under a pulse inhibit and for r0192.14 = 1.

Bit 2 can only be set to 1 subject to the following prerequisites:

- Pulse inhibit
- r0192.16 = 1
- p1800 < 2 x 1000/p0115[0]

Bit 12 can only be changed subject to the following prerequisites:

- preconditions, the same as bit 2 = 1
- p1810.3 = 0

For fast current changes, bit 15 = 1 together with p1802 = 0, 2 and p1803 > 106 % result in a significant increase in the torque ripple. As a consequence, increasing the modulation limit must be checked on an application for application basis.

Note: Re bit 00 = 0:

Voltage limitation from the minimum of the DC link voltage (lower ripple in the output current, reduced output voltage).

Re bit 00 = 1:

Voltage limitation from averaged DC link voltage (higher output voltage with increased ripple in the output current).

The selection is only valid if the DC link compensation is not performed in the Control Unit (bit 1 = 0).

Re bit 01 = 0:

DC link voltage compensation in the modulator.

Re bit 01 = 1:

DC link voltage compensation in the current control.

Re bit 02 = 0:

A gating unit that does not permit wobbulation is used.

Edge modulation is not possible for a parallel connection with a single-winding system (p7003 = 0).

Bit 02 cannot be set to 0 if bit 12 = 1.

Re bit 02 = 1:

A gating unit that permits wobbulation is used.

For a wobbulation amplitude p1811 = 0, the maximum possible pulse frequency in p1800 = 2 x 1000 / p0115[0].

For a wobbulation amplitude p1811 > 0, the maximum possible pulse frequency in p1800 = 1000 / p0115[0].

If optimized pulse patterns has been activated (p1802 > 6), then a parameter save is required and switch-off and switch-on again. This is displayed using a fault message (F01040).

Re bit 03 = 1:

The actual current value sensing and the determination of the valve ON times takes place with a double current controller clock cycle and phase offset.

The activation is only possible with r0192.23 = 1 and p1810.12 = 0 - and takes effect the next time the system is powered up.

Re bit 08 = 1:

Above the frequency threshold r1836[0], the pulse frequency is switched to the value in p1800. Below r1836[0] (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency (see r0114).

Re bit 09 = 1:

Above the frequency threshold r1836[1], the pulse frequency is increased to the next possible value. Below r1836[1] (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency.

If bit 8 is set to 0, bit 9 is automatically reset.

Re bit 10 = 0:

Pulse-locking function activated.

Re bit 10 = 1:

Pulse-dropping function activated.

Re bit 12 = 0:

The pulse frequency p1800 can also be synchronously set to the current controller clock cycle (see r0114).

Bit 12 can only be set from 1 to 0 if the pulse frequency p1800 is set synchronously to the current controller clock cycle. In this case, the gating unit is not switched over.

Re bit 12 = 1:

The pulse frequency p1800 can also be asynchronously set to the current controller clock cycle. In this case, the effects should be observed (see p1800).

If bit 12 is set to 1, then the gating unit is automatically switched over (p1810.2 = 1). If this is not possible (see above), then bit 12 cannot be set to 1.

Bit 12 cannot be set to 1, if p1810.3 = 1 is set.

Re bit 15 = 1

For p1802 = 0, 2 and p1803 > 106 %, dynamically, a modulation depth of more than 106 % is permitted. When p1803 is increased, the dynamic modulation depth reserve p1574 should be increased so that the maximum output voltage r0071 approximately remains the same.

p1811[0...n] Pulse frequency wobbulation amplitude / Puls wobb ampl

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [%]	20 [%]	0 [%]

Description: Sets the amplitude of the statistical wobbulation signal.

This signal is used to vary the pulse frequency to create a more pleasant sound.

Note: p1811 > 0 is possible, if the following applies:

- configuration: p1810.2 = 1 (wobbulation activated)
- pulse frequency: p1800 <= 1000 / p115[0]
- output filter, filter type: p0230 < 3 (no sine-wave filter)

p1812 BI: Offset calibration output current measurement / Off_calibr I_outp

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source to activate/de-activate offset calibration for output current measurement.

Caution: The absence of offset calibration can have a negative effect on control properties. Offset calibration must be performed before switching on the power unit for the first time after POWER ON.

Note: Offset calibration is only performed with pulses suppressed and can take up to one second.

p1815 Phase for PWM generation subgroup / Ph for PWM subgr

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0001 bin

Description: Sets bit 0 for recording the power unit in the subgroup for the "offset clocking".

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Recording in subgroup for offset clocking	Yes	No	-

Dependency: Refer to: p1818, p1819

Note: A change only becomes effective after booting.

If one of the following secondary conditions is not fulfilled, then none of the power units from the subgroup are clocked with an offset.

Secondary conditions for clocking with an offset:

- the PWM frequency (p1800[D]) of all power units in the subgroup must be the same.
- the PWM frequency (p1800[D]) must be the same in all drive data sets in the subgroup.
- the following must apply for the ratio between the PWM cycle (1/p1800[D]) and the current controller cycle (p0115[0]):

The ratio (1/p1800[D]) / (p0115[0]) must be an even integer number (2, 4, 6, ...) for all power units in the subgroup.

or

The ratio (p0115[0]) / (1/p1800[D]) must be an integer number (1, 2, 3, ...) for all power units in the subgroup.

p1816 Set phase for PWM generation manually / Set Ph for PWM

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1	16	-1

Description: Sets manual setting and overwriting of automatically determined phase shift for "offset clocking".

For p1816 = -1, the following applies:

Automatic mode. The phase shift value is automatically determined.

For p1816 = 0 ... 16, the following applies:

Manual mode. The user should define the phase shift value as follows:

1. PWM cycle (1/p1800) > current controller clock cycle (p0115[0])

The power unit executes a phase shift from Tshift = current controller cycle (p0115[0]) * p1816.

2. PWM cycle (1/p1800) <= current controller clock cycle (p0115[0])

For p1816 >= 1, the power unit executes a phase shift from Tshift = PWM cycle/2.

Dependency: Refer to: r0116, p1800, p1819

p1817 Minimum ratio, pulse frequency to the output frequency / Min f_puls / f_max

VECTOR_G

Can be changed: C2(2)	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
8.3	15.0	12.0

Description: Sets the minimum ratio between the pulse frequency and the output frequency.

Notice: If the ratio between the pulse frequency and the output frequency is reduced, then oscillations can occur in the output current that can result in significant levels of current ripple with the appropriate negative effects.

Note: When the maximum speed is changed, the pulse frequency p1800 is automatically limited to this minimum ratio. It is not permissible to reduce the pulse frequency if this would result in this ratio being undershot.

p1818 Phase for PWM generation configuration / Ph for PWM config

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	1

Description: Sets the phase shift for offset clocking.

For the first active power unit, it is specified whether clocking is to start at 0° (value = 0) or 180° (value = 1). All other active power units are clocked alternately according to the setting made here.

Dependency: Refer to: p1819

Note: A change only becomes effective after a POWER ON.
The parameter is not influenced by setting the factory setting.

p1819 Phase for PWM generation / Ph for PWM

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-1	16	-1

Description: Display for "offset clocking".

Depending on the particular case, the value is interpreted differently:

Case 1:

The PWM clock cycle (1/p1800[D]) is greater than the current controller clock cycle (p115[0]) and the ratio between the PWM clock cycle and the current controller clock cycle and is an integer and even multiple of it (e.g. p0115[0] = 125 µs, p1800[D] = 4 kHz, 2 kHz, 1 kHz).

The value displayed refers to:

- the phase shift in the current-controller cycles to be applied by the power unit.

Case 2:

The PWM clock cycle (1/p1800[D]) is less than or equal to the current controller clock cycle (p0115[0]) and the ratio between the current controller clock cycle and the PWM clock cycle is an integer and even multiple of it (e.g. p0115[0] = 125 µs, p1800[D] = 8 kHz, 16 kHz).

The value 1 displayed means that:

- the power unit is to apply a phase shift of 180 ° (from the PWM cycle).

A value of 0 displayed on all power units of the drive line-up means the following:

- the general conditions of the "offset clocking" (see p1815) are not fulfilled, i.e. no power unit is clocked with an offset.

Dependency: Refer to: p0108, r0108, p0115, p1800, p1815, p1816, p1818

Note: For reasons of compatibility, the parameter is an adjustable parameter. However, it functions solely as a display parameter. This means that factory setting -1 no longer has any significance and is only available for reasons of compatibility.

p1820[0...n] Reverse the output phase sequence / Outp_ph_seq rev

VECTOR_G	**Can be changed:** C2(3)	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 6732
	P-Group: Motor	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Sets the phase sequence reversal for the motor.

If the motor does not rotate in the required direction, then the output phase sequence can be reversed using this parameter. This means that with the same setpoint, the motor direction is reversed without reversing the encoder actual value.

When a speed encoder is being used, it may be necessary to also invert the encoder actual value (p0410).

Value:
0: OFF
1: ON

Dependency: Refer to: p1821

Caution: For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15.

Changing the direction using p1820 or p1821 is not recognized by the "Safe Direction without encoder". As a consequence, the limit provided by SDI (Safe Direction) from r9733 no longer functions.

Note: This setting can only be changed when the pulses are inhibited.

p1821 can be used to reverse the phase sequence and encoder actual value.

p1821[0...n] Dir of rot / Dir of rot

VECTOR_G

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to change the direction of rotation.

If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.

Value:
0: CW
1: CCW

Danger: When using external speed actual values for the speed controller (see p1440), for a direction of rotation change (p1821 = 1), then its polarity must also be changed (e.g. for drive object ENCODER via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.

Caution: For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15.

Changing the direction using p1820 or p1821 is not recognized by the "Safe Direction without encoder". As a consequence, the limit provided by SDI (Safe Direction) from r9733 no longer functions.

Notice: An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled.

Note: For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft.

When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).

p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.

p1822 Power unit line phases monitoring tolerance time / PU ph monit t_tol

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
500 [ms]	540000 [ms]	1000 [ms]

Description: Sets the tolerance time for line phase monitoring for blocksize power units.

If a line phase fault is present for longer than this tolerance time, then a corresponding fault is output.

Notice: When operating with a failed line phase, depending on the active power, values higher than the default value can either immediately damage the power unit or damage it over the long term.

Note: For the setting p1822 = maximum value, line phase monitoring is deactivated.

p1825 Converter valve threshold voltage / Threshold voltage

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [Vrms]	100.0 [Vrms]	0.6 [Vrms]

Description: Sets the threshold voltage drop of the valves (power semiconductor devices) to be compensated.

Note: The value is automatically calculated in the motor data identification routine.

p1828	**Compensation valve lockout time phase U / Comp t_lock ph U**		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: Sets the valve lockout time to compensate for phase U.

Notice: The deadtime compensation is deactivated with p7003 = 2.

Note: The value is automatically calculated in the motor data identification routine.

For type PM340 power units, the value is limited to 3.98 µs.

p1829	**Compensation valve lockout time phase V / Comp t_lock ph V**		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: Sets the valve lockout time to compensate for phase V.

Notice: The deadtime compensation is deactivated with p7003 = 2.

Note: For type PM340 power units, the value is limited to 3.98 µs.

p1830	**Compensation valve lockout time phase W / Comp t_lock ph W**		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

	Min	**Max**	**Factory setting**
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: Sets the valve lockout time to compensate for phase W.

Notice: The deadtime compensation is deactivated with p7003 = 2.

Note: For type PM340 power units, the value is limited to 3.98 µs.

p1832	**Dead time compensation current level / t_dead_comp I_lev**		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [Arms]	10000.0 [Arms]	0.0 [Arms]

Description: Sets the current level for the dead time compensation.

Above the current level, the dead time - resulting from the converter switching delays - is compensated by a previously calculated constant value. If the relevant phase current setpoint falls below the absolute value defined by p1832, the corrective value for this phase is continuously reduced.

Dependency: The factory setting of p1832 is automatically set to 0.02 * rated drive converter current (r0207).

p1835[0...1] Pulse frequency reduction switchover frequency shift / f_puls_red f_sw

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Hz]	800.00 [Hz]	0.00 [Hz]

Description: Frequency to shift the switchover frequency r1836 for pulse frequency reduction.

The parameter value reduces the switchover frequency threshold with the same parameter index.

Index: [0] = Frequency limit 1
[1] = Frequency limit 2

Dependency: Refer to: r1836

r1836[0...1] Pulse frequency reduction, switchover frequency / f_puls_red f_sw

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the frequency limits, under which the pulse frequency is automatically reduced.

Starting from the parameterized pulse frequency p1800, the pulse frequency is reduced to the next possible one, if the frequency limits and an additional hysteresis are fallen below.

Index: [0] = Frequency limit 1
[1] = Frequency limit 2

Dependency: Refer to: p1810, p1835

Note: The pulse frequency reduction is not active for U/f control.

A minimum clearance of 10 Hz is kept between the frequency thresholds, which cannot be fallen below when changing p1835.

Re index 0:

Frequency limit for the first pulse frequence reduction (active for p1810.8 = 1).

Re index 1:

Frequency limit for the second pulse frequence reduction (active for p1810.9 = 1).

p1900 Motor data identification and rotating measurement / MotID and rot meas

VECTOR_G

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	2

Description: Sets the motor data identification and speed controller optimization.
p1900 = 0:
Function inhibited.

p1900 = 2:

Induction motors --> set p1910 = 1 and p1960 = 0

Permanent-magnet or separately-excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0

When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next power-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.

For permanent-magnet or separately-excited synchronous motors, the encoder is adjusted with the next power-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

Value: 0: Inhibited
2: Identifying motor data (at standstill)

Dependency: In the simulation mode, the parameter cannot be written into.

When selecting the motor data identification routine, the drive data set changeover is suppressed.

Refer to: p1272, p1300, p1910

Notice: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

It is not permissible to activate write protection during the motor identification (p7761).

During the rotating measurement it is not possible to save the parameters (p0971, p0977).

Note: The motor and control parameters of the vector control are only optimally set when both measurements are carried out (initially at standstill, and then with the motor rotating). The measurement with rotating motor is not performed for p1300 < 20 (U/f controls).

An appropriate alarm is output when the parameter is set.

The power-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it.

The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions.

p1900 is automatically set to 0 after the motor data identification routine has been completed.

p1900 Motor data identification and rotating measurement / MotID and rot meas

VECTOR_G (n/M)			
	Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor identification	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	3	2

Description: Sets the motor data identification and speed controller optimization.

The motor identification should first be performed with the motor stationary (p1900 = 1, 2; also refer to p1910). Based on this, additional motor and control parameters can be determined using the motor data identification with the motor rotating (p1900 = 1, 3; also refer to p1960); not for p1300 < 20.

p1900 = 0:

Function inhibited.

p1900 = 1:

Induction motors --> set p1910 = 1 and p1960 = 0, 1, 2 depending on p1300

Permanent-magnet or separately-excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0, 1, 2 depending on p1300

When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next power-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.

For permanent-magnet or separately-excited synchronous motors, the encoder is adjusted with the next power-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

With the following power-on command, a rotating motor data identification routine is carried out - and in addition, a speed controller optimization by making measurements at different motor speeds.

p1900 = 2:

Induction motors --> set p1910 = 1 and p1960 = 0

Permanent-magnet or separately-excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0

When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next power-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.

For permanent-magnet or separately-excited synchronous motors, the encoder is adjusted with the next power-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

p1900 = 3:

Sets p1960 = 0, 1, 2 depending on p1300

This setting should only be selected if the motor data identification was already carried out at standstill.

When the drive enable signals are present, with the next power-on command, a rotating motor data identification routine is carried out - and in addition, speed controller optimization by taking measurements at different motor speeds.

Value:
0: Inhibited
1: Identifying motor data and optimizing speed control
2: Identifying motor data (at standstill)
3: Optimizing speed control (in the rotating mode)

Dependency: In the simulation mode, the parameter cannot be written into.

When selecting the motor data identification routine, the drive data set changeover is suppressed.

Refer to: p1272, p1300, p1910, p1960, p1990

Notice: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

It is not permissible to activate write protection during the motor identification (p7761).

During the rotating measurement it is not possible to save the parameters (p0971, p0977).

p1900 = 3:

This setting should only be selected if the motor data identification was already carried out at standstill.

Note: The motor and control parameters of the vector control are only optimally set when both measurements are carried out (initially at standstill, and then with the motor rotating). The measurement with rotating motor is not performed for p1300 < 20 (U/f controls).

An appropriate alarm is output when the parameter is set.

The power-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it.

The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions.

p1900 is automatically set to 0 after the motor data identification routine has been completed.

p1901 Test pulse evaluation configuration / Test puls config

VECTOR_G	**Can be changed:** T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor identification	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0000 bin

Description: Sets the configuration for the test pulse evaluation.

Bit 00: Check for conductor-to-conductor short circuit once/always when the pulses are enabled.

Bit 01: Check for ground fault once/always when the pulses are enabled.

Bit 02: Activation of the tests selected using bit 00 and/or bit 01 each time the pulses are enabled

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Phase short-circuit test pulse active	Yes	No	-
01	Ground fault detection test pulse active	Yes	No	-
02	Test pulse at each pulse enable	Yes	No	-

Dependency: Refer to: p0287

Note: If a conductor-to-conductor short-circuit is detected during the test, this is displayed in r1902.1.

If a ground fault is detected during the test, this is displayed in r1902.2.

Re bit 02 = 0:

If the test was successful once after POWER ON (see r1902.0), it is not repeated.

Re bit 02 = 1:

The test is not only performed after POWER ON, but also each time the pulses are enabled.

r1902 — Test pulse evaluation status / Test puls ev stat

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of the test pulse evaluation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Short-circuit test successfully performed	Yes	No	-
01	Phase short-circuit detected	Yes	No	-
02	Ground fault test successfully performed	Yes	No	-
03	Ground fault detected	Yes	No	-
04	Identification pulse width greater than the minimum pulse width	Yes	No	-

Note: If the ground fault test was selected, but not successfully performed, then sufficient current will not be able to be established during the test pulses.

Re bit 04:

A test pulse longer than one sampling time has occurred

p1905 — Parameter tuning selection / Par tuning select

VECTOR_G (n/M)

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	90	0

Description: The fine encoder calibration should be started during the first commissioning or after the encoder is replaced.

The fine calibration starts when the pulses are enabled and performs a rotating measurement (approximately 1 minute). In this case, a setpoint speed of at least 40 % of the motor rated speed must be entered, and the torque must be less than half of the motor rated torque.

The phases of the fine calibration of displayed using alarm A07976.

The fine calibration ends with the calculation of p0431 for the following pulse inhibit.

p1905 is automatically set to 0 at the end of the fine calibration.

Value:
0: Inactive
90: Fine encoder calibration

Dependency: If the motor encoder adjustment has not been performed (p3925.4 = 0) or the encoder calibration is activated (p1990 != 0), then encoder fine calibration is prevented.

Refer to: p1272, p1910, p1960, p1990

Notice: During encoder fine calibration, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.

Note: For p1905 = 90 and with the pulses not enabled, the function is only executed the next time that the pulses are enabled.

When selecting the encoder fine calibration, the changeover of the motor data sets is suppressed.

p1909[0...n] — Motor data identification control word / MotID STW

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** MDS, p0130	**Func. diagram:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the configuration for the motor data identification.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Stator inductance estimate no measurement	Yes	No	-
01	Cl.-loop current control w/ dead-beat controller	Yes	No	-
02	Rotor time constant estimate no measurement	Yes	No	-
03	Leakage inductance estimate no measurement	Yes	No	-
04	Activates the identification dynamic leakage inductance	Yes	No	-
05	Determine Tr and Lsig evaluation in the time range	Yes	No	-
06	Activate vibration damping	Yes	No	-
07	De-activate vibration detection	Yes	No	-
11	De-activate pulse measurement Lq Ld	Yes	No	-
12	De-activate rotor resistance Rr measurement	Yes	No	-
14	De-activate valve interlocking time measurement	Yes	No	-
15	Determine only stator resistance, valve voltage fault, dead time	Yes	No	-
16	Short motor identification (lower quality)	Yes	No	-
17	Measurement without control parameter calculation	Yes	No	-
20	Estimate cable resistance	Yes	No	-

Note: The following applies to permanent-magnet synchronous motors:

Without de-selection in bit 11, in the closed-loop control mode, the direct inductance LD and the quadrature inductance Lq are measured at a low current.

When de-selecting with bit 11 or in the U/f mode, the stator inductance is measured at half the rated motor current.

If the stator is inductance is not measured but is to be estimated, then bit 0 should be set and bit 11 should be de-selected.

p1910 Motor data identification selection / MotID selection

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	28	1

Description: Sets the motor data identification routine.

The motor data identification routine is carried out after the next power-on command.

p1910 = 1:

All motor data and the drive converter characteristics are identified and then transferred to the following parameters:

p0350, p0354, p0356, p0357, p0358, p0360, p1825, p1828, p1829, p1830

After this, the control parameter p0340 = 3 is automatically calculated.

Value:

0: Inhibited
1: Complete identification (ID) and acceptance of motor data
2: Complete identification (ID) of motor data without acceptance
3: ID of the saturation characteristic and acceptance
4: ID of the saturation characteristic without acceptance
5: ID of dynamic leakage inductance Lsig (r1920) without acceptance
6: ID of lockout time (r1926) without acceptance
7: ID of stator resistance Rs (r1912) without acceptance
8: ID of stator inductance Ls (r1915) Rr (r1927) without acceptance
9: ID of rotor time constant Tr (r1913) without acceptance
10: ID of static leakage inductance Lsig (r1914) without acceptance
20: Voltage vector input
21: Voltage vector input without filter
22: Rectangular voltage vector input without filter
23: Triangular voltage vector input without filter

24: Rectangular voltage vector input with filter
25: Triangular voltage vector input with filter
26: Enter voltage vector with DTC correction
27: Enter voltage vector with AVC
28: Enter voltage vector with DTC + AVC correction

Dependency: "Quick commissioning" must be carried out (p0010 = 1) before executing the motor data identification routine!

In the simulation mode, the parameter cannot be written into. When selecting the motor data identification routine, the drive data set changeover is suppressed.

Refer to: p1272, p1900

Notice: After the motor data identification (p1910 > 0) has been selected, alarm A07991 is output and a motor data identification routine is carried out as follows at the next power-on command:

- current flows through the motor and a voltage is present at the drive converter output terminals.

- during the identification routine, the motor shaft can rotate through a maximum of half a revolution.

- however, no torque torque is generated.

Note: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

When setting p1910, the following should be observed:

1. "With acceptance" means:

The parameters specified in the description are overwritten with the identified values and therefore have an influence on the controller setting.

2. "Without acceptance" means:

The identified parameters are only displayed in the range r1912 ... r1926. The controller settings remain unchanged.

3. p1910 = 3, 4, 5 can only be selected for induction motors.

4. For settings 27 and 28, the AVC configuration set using p1840 is active.

The power-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it. The duration of the measurements can lie between 0.3 s and several minutes. This time is mainly influenced by the motor size. At the end of the motor data identification, p1910 is automatically set to 0, if only the stationary measurement is selected, then p1900 is also reset to 0, otherwise, the rotating measurement is activated.

p1911 Phases to be identified number / Ph to ident qty

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 4

Dependency: Refer to: r1934, p1959, p1960

Note: The Lq characteristic consists of the value pairs from r1934 and r1935 with the same index.

p1959[0...n] Rotating measurement configuration / Rot meas config

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Motor identification	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0000 0000 0001 1111 bin

Description: Sets the configuration of the rotating measurement.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Encoder test active	Yes	No	-
01	Saturation characteristic identification	Yes	No	-
02	Moment of inertia identification	Yes	No	-
03	Re-calculates the speed controller parameters	Yes	No	-
04	Speed controller optimization (vibration test)	Yes	No	-
05	q leakage inductance ident. (for current controller adaptation)	Yes	No	-
11	Do not change the controller parameters during the measurement	Yes	No	-
12	Measurement shortened	Yes	No	-
13	After measurement direct transition into operation	Yes	No	-

Note: The encoder is only tested if the rotating measurement with encoder is selected (p1960 = 2).

The following parameters are influenced for the individual optimization steps:

Bit 00: None

Bit 01: p0320, p0360, p0362 ... p0369

Bit 02: p0341, p0342

Bit 03: p1400.0, p1458, p1459, p1460, p1462, p1463, p1470, p1472, p1496

Bit 04: Dependent on p1960

Bit 05: p0391, p0392, p0393, p1402.2 only for induction motors

p1960 = 1, 3: p1458, p1459, p1470, p1472, p1496, p1400.0

p1960 = 2, 4: p1458, p1459, p1460, p1462, p1496, p1461, p1463

The identification of the q leakage inductance can only be carried out for unloaded motors or motors with a low load (load approx. 30% below the rated motor torque). Only then is a current controller adaptation (p0391 ... p0393) parameterized if the q-leakage inductance under no-load conditions is at least 30 % higher than the total leakage inductance (p0356, p0358).

Re bit 11 = 1:

Bits 02, 03, 04 no longer have any effect. It makes sense to set bit 11 if the speed controller and it's adaptation were already set before the measurement.

Re bit 12 = 1:

The selection only has an effect on the measurement p1960 = 1, 2. For the shortened measurement, the magnetizing current and moment of inertia are determined with a somewhat lower accuracy, the oscillation test is completely eliminated.

Re bit 13 = 1:

After the measurement has been completed, the system immediately goes into closed-loop speed controlled operation.

p1960 Rotating measurement selection / Rot meas sel

VECTOR_G			
	Can be changed: T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor identification	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	4	0

Description: Sets the rotating measurement.

The rotating measurement is carried out after the next power-on command.

The setting possibilities of the parameter depend on the open-loop/closed-loop control mode (p1300).

p1300 < 20 (U/f open-loop control):

It is not possible to select rotating measurement or speed controller optimization.

p1300 = 20, 22 (encoderless operation):

Only rotating measurement or speed controller optimization can be selected in the encoderless mode.

p1300 = 21, 23 (operation with encoder):

Both versions (encoderless and with encoder) of the rotating measurement and speed controller optimization can be selected.

Value:

0: Inhibited
1: Rotating measurement in encoderless operation
2: Rotating measurement with encoder
3: Speed controller optimization in encoderless operation
4: Speed controller optimization with encoder

Dependency: Before the rotating measurement is carried out, the motor data identification routine (p1900, p1910, r3925) should have already been done.

In the simulation mode, a value of 1 cannot be written into the parameter.

When selecting the rotating measurement, the drive data set changeover is suppressed.

When selecting rotating measurement (with the exception for p1959.13 = 1) the following BICO parameters are set to standard values, and after the measurement has been completed, are reset back to the original parameter assignments:

p1020 ... p1023, p1070, p1075, p1138, p1139, p1140 ... p1143, p1155, p1160, p1437, p1476, p1477

Refer to: p1272, p1300, p1900, p1959, p1967, r1968

Danger: For drives with a mechanical system that limits the distance moved, it must be ensured that this is not reached during the rotating measurement. If this is not the case, then it is not permissible that the measurement is carried out.

Notice: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

During the rotating measurement it is not possible to save the parameters (p0971, p0977).

Note: When the rotating measurement is activated, it is not possible to save the parameters (p0971, p0977).

Parameter changes are automatically made for the rotating measurement (e.g. p1120); this is the reason that up to the end of the measurement, and if no faults are present, no manual changes should be made.

The ramp-up and ramp-down times (p1120, p1121) are limited, for the rotating measurement, to 900 s.

For speed controller optimization with encoder (p1960 = 2, 4), the speed controller for encoderless operation is also pre-assigned (p1470, p1472).

Depending on whether the speed controller optimization is carried out with or without encoder, different Kp/Tn adaptations of the speed controller are set (p1464, p1465). If the drive should be controlled with as well as without speed encoder, then we recommend the use of two drive data sets (p0180). These can then be executed with different speed controller adaptations.

p1961 Saturation characteristic speed to determine / Sat_char n determ

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
26 [%]	75 [%]	40 [%]

Description: Sets the speed to determine the saturation characteristic and the encoder test.

The percentage value is referred to p0310 (rated motor frequency).

Dependency: Refer to: p0310, p1959

Note: The saturation characteristics should be determined at an operating point with the lowest possible load.

r1962[0...4] Saturation characteristic magnetizing current / Sat_char I_mag

VECTOR_G (n/M)

P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the magnetizing inductances of the identified saturation characteristic.

The values are referred to r0382.

Index:
[0] = Value 1
[1] = Value 2
[2] = Value 3
[3] = Value 4
[4] = Value 5

Dependency: Refer to: r0382

r1964[0...4] Saturation characteristic rotor flux / Sat_char rot flux

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the rotor flux values of the identified saturation characteristic.

After they have been determined, the values are transferred to p0362 ... p0365.

Index:
[0] = Value 1
[1] = Value 2
[2] = Value 3
[3] = Value 4
[4] = Value 5

p1965 Speed_ctrl_opt speed / n_opt speed

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10 [%]	75 [%]	40 [%]

Description: Sets the speed for the identification of the moment of inertia and the vibration test.

Induction motor:

The percentage value is referred to p0310 (rated motor frequency).

Synchronous motor:

The percentage value is referred to the minimum from p0310 (rated motor frequency) and p1082 (maximum speed).

Dependency: Refer to: p0310, p1959

Note: In order to calculate the inertia, sudden speed changes are carried out - the specified value corresponds to the lower speed setpoint. This value is increased by 20 % for the upper speed value.

The q leakage inductance (refer to p1959.5) is determined at zero speed and at 50 % of p1965 - however, with a maximum output frequency of 15 Hz and at a minimum of 10% of the rated motor speed.

p1967 Speed_ctrl_opt dynamic factor / n_opt dyn_factor

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [%]	400 [%]	100 [%]

Description: Sets the dynamic response factor for speed controller optimization.

After optimization, the dynamic response achieved is displayed in r1968.

Dependency: Refer to: p1959, r1968

Note: For a rotating measurement, this parameter can be used to optimize the speed controller.

p1967 = 100 % --> speed controller optimization according to a symmetric optimum.

p1967 > 100 % --> optimization with a higher dynamic response (Kp higher, Tn lower).

If the actual dynamic response (see r1968) is significantly reduced with respect to the required dynamic response (p1967), then this can be as a result of mechanical load oscillations. If, in spite of this load behavior, a higher dynamic response is required, then the oscillation test (p1959.4 = 0) should be deactivated and the measurement repeated.

r1968 Speed_ctrl_opt dynamic factor actual / n_opt dyn_fact act

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the dynamic factor which is actually achieved for the vibration test

Dependency: Refer to: p1959, p1967

Note: This dynamic factor only refers to the control mode of the speed controller set in p1960.

r1969 Speed_ctrl_opt moment of inertia determined / n_opt M_inert det

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** 25_1	**Unit selection:** p0100
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kgm²]	- [kgm²]	- [kgm²]

Description: Displays the determined moment of inertia of the drive.
After it has been determined, the value is transferred to p0341, p0342.

Dependency: IEC drives (p0100 = 0): unit kg m^2
NEMA drives (p0100 = 1): unit lb ft^2
Refer to: p0341, p0342, p1959

r1970[0...1] Speed_ctrl_opt vibration test vibration frequency determined / n_opt f_vib det

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4

p1980[0...n] PolID technique / PolID technique

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: ASM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	12	4

Description: Sets the pole position identification technique.

p1980 = 1, 8: The current magnitude is set using p0329.

p1980 = 4, 6: The current magnitude of the first measurement section is set using p0325, the second using p0329.

p1980 = 10: The rated motor current is impressed to align.

The current magnitudes are limited to the rated power unit values.

p1980 = 12: The induced stator voltage is sensed using a VSM and evaluated. This rotor position identification technique can only be used for separately-excited synchronous motors with incremental encoder.

Value:
1: Voltage pulsing 1st harmonics
4: Voltage pulsing 2-stage
6: Voltage pulsing 2-stage inverse
8: Voltage pulsing 2nd harmonic, inverse
10: DC current injection
12: Rotor position sensing with VSM for FEM with incremental encoder

Dependency: When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.

In the simulation mode, the parameter cannot be written into.

Refer to: p0325, p0329, p1272, p1780

Note: Voltage pulse technique (p1980 = 1, 4, 6, 8) cannot be applied to separately-excited synchronous motors (p0300 = 5) and for for operation with sine-wave output filters (p0230).

The rotor position identification technique (p1980 = 12) cannot be used for permanent-magnet synchronous motors.

p1982[0...n] PolID selection / PolID selection

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Activates the pole position identification routine to determine the commutation angle and to carry out a plausibility check.

Value:
0: Pole position identification off
1: Pole position identification for commutation
2: Pole position identification for plausibility check

Recommend.: Re p1982 = 1:

This is used for synchronous motors with motor encoder without absolute data.

The information/data regarding the absolute commutation angle is supplied via a track C/D, Hall sensors, an absolute encoder or from the pole position identification routine.

Re p1982 = 2:

This is used for synchronous motor with motor encoder with absolute data to check this data.

For VECTOR, the following applies:

With p1982 = 2, each time the pulses are enabled it is checked whether the absolute position supplied from the encoder does not exceed a deviation of 45 degrees to the identified pole wheel position.

With separately-excited synchronous motors (p0300 = 5), pole position identification cannot be selected if an encoder with position data is used (e.g. SSI encoder).

Dependency: Refer to: p0325, p0329, p1980, r1984, r1985, r1987, p1990

Note: For encoderless operation, the pole position identification routine is selected with p1780.6

r1984	PolID angular difference / PolID ang diff		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor identification	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°]	- [°]	- [°]

Description: Displays the angular difference between the actual electrical commutation angle and the angle determined by the pole position identification.

Dependency: Refer to: p0325, p0329, p1980, p1982, r1985, r1987, p1990

Note: PolID: Pole position identification

When the pole position identification routine is executed several times using p1983, the spread of the measured values can be determined using this value. At the same position, the spread should be less than 2 degrees electrical.

r1985	PolID saturation curve / PolID sat_char		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor identification	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the saturation characteristic of the pole position identification routine (saturation technique).

Displays the current characteristic of the pole position identification routine (elasticity technique).

Dependency: Refer to: p0325, p0329, p1980, p1982, r1984, r1987, p1990

Note: PolID: Pole position identification

Regarding the saturation technique:

The values for the characteristic of the last saturation-based pole position identification routine are output every 1 ms in order to record signals (e.g. trace).

r1987	PolID trigger characteristic / PolID trig_char		
VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor identification	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [%]	- [%]	- [%]

Description: Displays the trigger characteristic of the pole position identification routine.

The values for the characteristic of the last pole position identification routine are output every 1 ms in order to record signals (e.g. trace).

The values for trigger characteristic and saturation characteristic are always output in synchronism from a time perspective.

Dependency: Refer to: p0325, p0329, p1980, p1982, r1984, r1985, p1990

Note: PolID: Pole position identification

The following information and data can be taken from the trigger characteristic.

- the value -100% marks the angle at the start of the measurement.

- the value +100 % marks the commutation angle determined from the pole position identification routine.

p1990 Encoder adjustment determine angular commutation offset / Enc_adj det ang

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Units group:** -	**Unit selection:** -
Not for motor type: ASM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: This function is only required for synchronous motors and can be started when commissioning for the first time or after replacing an encoder. The function acts on the active motor data set.

Alarm A07971 is output while the angular commutation offset is being determined. p1990 is automatically set to 0 after the angular commutation offset has been determined.

For p1990 = 1 (encoder adjustment with transfer), the following applies:

The angular commutation offset is determined and transferred into p0431.

For p1990 = 2 (encoder adjustment for checking), the following applies:

The angular commutation offset is determined and is not transferred into p0431. For a deviation of more than 6 ° electrical, fault F07413 is output.

For p1990 = 3 (encoder adjustment in operation), the following applies:

PolID procedure runs before the zero mark detection. The angular commutation offset is determined and transferred into p0431. A fine adjustment (p1905) is then optionally possible.

Value:
0: Deactivated
1: Activated with transfer
2: Activated for checking
3: Activates encoder adjustment in operation

Dependency: In the simulation mode, the parameter cannot be written into.

When selecting the encoder adjustment, the changeover of the drive data sets is suppressed.

Encoder adjustment is only carried out if the function module for "speed/torque control" is activated (r0108.2 = 1).

Refer to: p0325, p0329, p0431, p1272, p1900

Caution: When the encoder is being adjusted, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.

p1991[0...n] Motor changeover angular commutation correction / Ang_com corr

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-180 [°]	180 [°]	0 [°]

Description: Sets the angle that is added to the commutating angle.

Caution: If the angular correction is not correctly set, when changing over and with closed-loop torque control, the motor can accelerate to high speeds in spite of the fact that a setpoint of zero has been entered.

p1999[0...n] Ang. commutation offset calibr. and PolID scaling / Com_ang_offs scal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10 [%]	5000 [%]	100 [%]

Description: Sets the scaling for the runtime of the automatic encoder calibration and of the pole position identification technique in which the current is injected.

Dependency: Refer to: p0341, p0342

Caution: For p1999 > 100 % (setting large moments of inertia) the following applies:
There is no locked rotor monitoring (F07970 fault value 2).
The plausibility check of the encoder signal (F07970 fault value 4) only checks the sign.

Note: For high moments of inertia, it is practical to scale the runtime of the calibration higher.

p2000 Reference frequency / f_ref

B_INF

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 2

Min	**Max**	**Factory setting**
6.00 [rpm]	210000.00 [rpm]	3000.00 [rpm]

Description: Sets the reference quantity for speed and frequency.
All speeds or frequencies specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

p2000 Reference velocity reference frequency / v_ref f_ref

ENC (Lin_enc)

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.60 [m/min]	600.00 [m/min]	120.00 [m/min]

Description: Sets the reference quantity for velocity and frequency.
All velocities or frequencies specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
The following applies: Reference frequency (in Hz) = reference velocity (in (m/min) / 60)

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

p2000 Reference speed reference frequency / n_ref f_ref

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
6.00 [rpm]	210000.00 [rpm]	3000.00 [rpm]

Description: Sets the reference quantity for speed and frequency.
All speeds or frequencies specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

The following applies: Reference frequency (in Hz) = reference speed (in ((rpm) / 60) x pole pair number)

Dependency: Refer to: p2001, p2002, p2003, r2004

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example 1:

The signal of an analog input (e.g. r4055[0]) is connected to a speed setpoint (e.g. p1070[0]). The actual percentage input value is cyclically converted into the absolute speed setpoint using the reference speed (p2000).

Example 2:

The setpoint from PROFIBUS (r2050[1]) is connected to a speed setpoint (e.g. p1070[0]). The actual input value is cyclically converted into a percentage value via the pre-specified scaling 4000 hex. This percentage value is converted to the absolute speed setpoint via reference speed (p2000).

p2001 Reference voltage / Reference voltage

B_INF, VECTOR_G			
	Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Communications	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	10 [Vrms]	100000 [Vrms]	1000 [Vrms]

Description: Sets the reference quantity for voltages.

All voltages specified as relative value are referred to this reference quantity. This also applies for direct voltage values (= rms value) like the DC-link voltage.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note:

This reference quantity also applies to direct voltage values. It is not interpreted as rms value, but as DC voltage value.

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

For infeed units, the parameterized device supply voltage (p0210) is pre-assigned as the reference quantity.

Example:

The actual value of the DC link voltage (r0070) is connected to a test socket (e.g. p0771[0]). The actual voltage value is cyclically converted into a percentage of the reference voltage (p2001) and output according to the parameterized scaling.

p2002 Reference current / I_ref

B_INF, VECTOR_G			
	Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Communications	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.10 [Arms]	100000.00 [Arms]	100.00 [Arms]

Description: Sets the reference quantity for currents.

All currents specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Notice: If various DDS are used with different motor data, then the reference quantities remain the same as these are not changed over with the DDS. The resulting conversion factor should be taken into account (e.g. for trace records).

Example:

p2002 = 100 A

Reference quantity 100 A corresponds to 100 %

p0305[0] = 100 A

Rated motor current 100 A for MDS0 in DDS0 --> 100 % corresponds to 100 % of the rated motor current p0305[1] = 50 A

Rated motor current 50 A for MDS1 in DDS1 --> 100 % corresponds to 200 % of the rated motor current

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

SERVO:

Preassigned value for p0338 > 0.001 is p0338, otherwise 2 * p0305.

VECTOR:

Preassigned value is p0640.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

For infeed units, the rated line current, which is obtained from the rated power and parameterized rated line supply voltage (p2002 = r0206 / p0210 / 1.73) is pre-assigned as the reference quantity.

Example:

The actual value of a phase current (r0069[0]) is connected to a test socket (e.g. p0771[0]). The actual current value is cyclically converted into a percentage of the reference current (p2002) and output according to the parameterized scaling.

p2003 Reference torque / M_ref

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01 [Nm]	20000000.00 [Nm]	1.00 [Nm]

Description: Sets the reference quantity for torque.

All torques specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

SERVO:

Preassigned value for p0338 and p0334 > 0.001 is p0338 * p0334, otherwise 2 * p0333.

VECTOR:

Preassigned value is 2 * p0333.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example:

The actual value of the total torque (r0079) is connected to a test socket (e.g. p0771[0]). The actual torque is cyclically converted into a percentage of the reference torque (p2003) and output according to the parameterized scaling.

r2004 Reference power / P_ref

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kW]	- [kW]	- [kW]

Description: Displays the reference quantity for power.

All power ratings specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Dependency: This value is calculated as follows:

Infeed: Calculated from voltage times current.

Closed-loop control: Calculated from torque times speed.

Refer to: p2000, p2001, p2002, p2003

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

The reference power is calculated as follows:

- 2 * Pi * reference speed / 60 * reference torque (motor)

- reference voltage * reference current * root(3) (infeed)

p2005 Reference angle / Reference angle

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3

4	13	8

Description: Sets the baud rate for the fieldbus interface USS.

Value:
4: 2400 baud
5: 4800 baud
6: 9600 baud
7: 19200 baud
8: 38400 baud
9: 57600 baud
10: 76800 baud
11: 93750 baud
12: 115200 baud
13: 187500 baud

Note: Fieldbus IF: Fieldbus interface

Changes only become effective after POWER ON.

The parameter is not influenced by setting the factory setting.

The parameter is set to the factory setting when the protocol is reselected.

p2021 Field bus interface address / Field bus address

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 9310
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	31	0

Description: Displays or sets the address for the fieldbus interface USS.

The address can be set as follows:

1) Using the address switch on the Control Unit.

--> p2021 displays the address setting.

--> A change only becomes effective after a POWER ON.

2) Using p2021
--> Only if an address of 0 or an address that is invalid for the fieldbus selected in p2030 has been set using the address switch.
--> The address is saved in a non-volatile fashion using the function "copy from RAM to ROM".
--> A change only becomes effective after a POWER ON.

Dependency: Refer to: p2030

Note: Changes only become effective after POWER ON.
The parameter is not influenced by setting the factory setting.
The parameter is set to the factory setting when the protocol is reselected.

p2022 Field bus int USS PZD no. / Field bus USS PZD

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 9310
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	16	2

Description: Sets the number of 16-bit words in the PZD part of the USS telegram for the field bus interface.

Dependency: Refer to: p2030

Note: The parameter is not influenced by setting the factory setting.

p2023 Field bus int USS PKW no. / Field bus USS PKW

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9310
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	127	127

Description: Sets the number of 16-bit words in the PKW part of the USS telegram for the field bus interface.

Value:
0: PKW 0 words
3: PKW 3 words
4: PKW 4 words
127: PKW variable

Dependency: Refer to: p2030

Note: The parameter is not influenced by setting the factory setting.

r2029[0...7] Field bus int error statistics / Field bus error

CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9310
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the receive errors on the field bus interface (USS).

Index:
[0] = Number of error-free telegrams
[1] = Number of rejected telegrams
[2] = Number of framing errors
[3] = Number of overrun errors
[4] = Number of parity errors
[5] = Number of starting character errors
[6] = Number of checksum errors
[7] = Number of length errors

p2030 Field bus int protocol selection / Field bus protocol

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9310
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
3	6	3

Description: Sets the communication protocol for the field bus interface.

Value:
3: PROFIBUS
6: USS(RS232)

Note: Changes only become effective after POWER ON.
The parameter is not influenced by setting the factory setting.

r2032 Master control control word effective / PcCtrl STW eff

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the effective control word 1 (STW1) of the drive for the master control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	ON/OFF1	Yes	No	-
01	OC / OFF2	Yes	No	-
03	Operation enable	Yes	No	-
07	Acknowledge fault	Yes	No	-
10	Master ctrl by PLC	Yes	No	-

Notice: The master control only influences control word 1 and speed setpoint 1. Other control words/setpoints can be transferred from another automation device.

Note: OC: Operating condition

r2032 Master control control word effective / PcCtrl STW eff

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the effective control word 1 (STW1) of the drive for the master control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	ON/OFF1	Yes	No	-
01	OC / OFF2	Yes	No	-
02	OC / OFF3	Yes	No	-
03	Operation enable	Yes	No	-
04	Ramp-function generator enable	Yes	No	-
05	Start ramp-function generator	Yes	No	-
06	Speed setpoint enable	Yes	No	-
07	Acknowledge fault	Yes	No	-
08	Jog bit 0	Yes	No	3030
09	Jog bit 1	Yes	No	3030
10	Master ctrl by PLC	Yes	No	-

Notice: The master control only influences control word 1 and speed setpoint 1. Other control words/setpoints can be transferred from another automation device.

Note: OC: Operating condition

p2035 Fieldbus interface USS PIV drive object number / Fieldbus USS DO_no

CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	62	2

Description: Sets the drive object number for communication via the field bus interface (USS).

Dependency: Refer to: p0978

Note: p2035 defines the destination for USS parameter requests (PIV).

p0978[0] defines the destination for USS process data (PZD).

The parameter is available globally on all drive objects.

The parameter is not influenced by setting the factory setting.

p2037 IF1 PROFIdrive STW1.10 = 0 mode / IF1 PD STW1.10=0

B_INF, ENC, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Sets the processing mode for PROFIdrive STW1.10 "master control by PLC".

Generally, control world 1 is received with the first receive word (PZD1) (this is in conformance to the PROFIdrive profile). The behavior of STW1.10 = 0 corresponds to that of the PROFIdrive profile. For other applications that deviate from this, the behavior can be adapted using this particular parameter.

Value:
0: Freeze setpoints and continue to process sign-of-life
1: Freeze setpoints and sign-of-life
2: Do not freeze setpoints

Recommend.: Do not change the setting p2037 = 0.

Note: If the STW1 is not transferred according to the PROFIdrive with PZD1 (with bit 10 "master control by PLC"), then p2037 should be set to 2.

p2038 IF1 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Sets the interface mode of the PROFIdrive control words and status words.

When selecting a telegram via p0922 (p2079), this parameter influences the device-specific assignment of the bits in the control and status words.

Value:
0: SINAMICS
1: SIMODRIVE 611 universal
2: VIK-NAMUR

Dependency: Refer to: p0922, p2079

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For p0922 (p2079) = 100 ... 199, p2038 is automatically set to 1 and p2038 can no longer be changed. This means that for these telegrams, the "SIMODRIVE 611 universal" interface mode is set and cannot be changed.

p2039 Select debug monitor interface / Debug monit select

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Sets the serial interface for the debug monitor.

The serial interface for the debug monitor is COM1 (X140) or COM2 (internal).

Value = 0: COM2 (internal)

Value = 1: COM1 (X140), commissioning protocol is de-activated

Value = 2: COM2 (internal)

Value = 3: Reserved

p2040 Fieldbus interface monitoring time / Fieldbus t_monit

CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9310
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	1999999 [ms]	100 [ms]

Description: Sets the monitoring time to monitor the process data received via the fieldbus interface.

If no process data is received within this time, then an appropriate message is output.

Note: p2040 = 0:

Monitoring is de-activated.

p2042 PROFIBUS Ident Number / PB Ident No.

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the PROFIBUS Ident Number (PNO-ID).

SINAMICS can be operated with various identities on PROFIBUS. This allows the use of a PROFIBUS GSD that is independent of the device (e.g. PROFIdrive VIK-NAMUR with Ident Number 3AA0 hex).

Value:
0: SINAMICS
1: VIK-NAMUR

Note: Every change only becomes effective after a POWER ON.

r2043.0...2 BO: IF1 PROFIdrive PZD state / IF1 PD PZD state

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the PROFIdrive PZD state.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Setpoint failure	Yes	No	-
01	Clock cycle synchronous operation active	Yes	No	-
02	Fieldbus oper	Yes	No	-

Dependency: Refer to: p2044

Note: When using the "setpoint failure" signal, the bus can be monitored and an application-specific response triggered when the setpoint fails.

p2044 IF1 PROFIdrive fault delay / IF1 PD fault delay

B_INF, ENC, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [s]	100 [s]	0 [s]

Description: Sets the delay time to initiate fault F01910 after a setpoint failure.

The time until the fault is initiated can be used by the application. This means that is is possible to respond to the failure while the drive is still operational (e.g. emergency retraction).

Dependency: Refer to: r2043

p2045 CI: PB/PN clock synchronous controller sign-of-life signal source / PB/PN ctrSoL S_src

ENC, VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer16	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Connector input for the sign-of-life of the clock synchronous PROFIBUS/PROFINET controller.

The sign-of-life is expected at bits 12 to 15. Bits 0 to 11 are not evaluated.

The sign-of-life signal is normally received in PZD4 (control word 2) from the controller.

Dependency: Refer to: p0925, r2065

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p2047 PROFIBUS additional monitoring time / PB suppl t_monit

CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	20000 [ms]	0 [ms]

Description: Sets the additional monitoring time to monitor the process data received via PROFIBUS.

Enables short bus faults to be compensated.

If no process data is received within this time, then an appropriate message is output.

Recommend.: In the isochronous mode, the additional monitoring time should not be set.

Note: For controller STOP, the additional monitoring time is not effective.

p2048 IF1 PROFIdrive PZD sampling time / IF1 PZD t_sample

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [ms]	16.00 [ms]	4.00 [ms]

Description: Sets the sampling time for the cyclic interface 1 (IF1).

Note: The system only permits certain sampling times and after writing to this parameter, displays the value that has actually been set.

For clock cycle synchronous operation, the specified bus cycle time applies (Tdp).

r2050[0...9] CO: IF1 PROFIdrive PZD receive word / IF1 PZD recv word

B_INF

r2054 PROFIBUS status / PB status

CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4	-

Description: Status display for the PROFIBUS interface.

Value:
0: OFF
1: No connection (search for baud rate)
2: Connection OK (baud rate found)
3: Cyclic connection with master (data exchange)
4: Cyclic data OK

Note: Re r2054 = 3:

In state 3 (the LED flashes green), a cyclic connection has been established to the PROFIBUS master; however, one of the following prerequisites is missing for cyclic operation:

- No setpoints are being received as the PROFIBUS master is in the STOP condition.

Only for clock-cycle synchronous operation, the following applies:

- The drive is not in synchronism as the global control (GC) has an error.

Re r2054 = 4:

In the status 4 (LED green), the cyclic connection to the PROFIBUS master has been established and setpoints are being received. The clock cycle synchronization is OK, the global control (GC) is error-free.

This state does not provide any statement regarding the quality of the clock cycle synchronous sign-of-life characters on the drive objects.

r2064[0...7] PB/PN diagnostics clock cycle synchronism / PB/PN diag clock

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the last parameter received from the PROFIBUS/PROFINET controller for clock synchronism.

The parameters for clock synchronism are created when configuring the bus and are transferred at the start of cyclic operation from the controller to the device.

Index:
[0] = Clock synchronous mode activated
[1] = Bus cycle time (Tdp) [µs]
[2] = Master cycle time (Tmapc) [µs]
[3] = Instant of actual value acquisition (Ti) [µs]
[4] = Instant of setpoint acquisition (To) [µs]
[5] = Data exchange interval (Tdx) [µs]
[6] = PLL window (Tpll-w) [1/12 µs]
[7] = PLL delay time (Tpll-d) [1/12 µs]

r2065 PB/PN controller sign of life diagnostics / PB/PN ctr SoL diag

ENC, VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays how often the sign-of-life from the clock synchronous PROFIBUS/PROFINET controller last failed.
An appropriate fault is output when the tolerance, specified in p0925, is exceeded.

r2067[0...1] IF1 PZD maximum interconnected / IF1 PZDmaxIntercon

B_INF, CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, ENC, TB30, TM150, TM31, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**

Dependency: Refer to: r2094, r2095, p2099

p2099[0...1] CI: Connector-binector converter signal source / Con/bin S_src

B_INF, CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, ENC, TB30, TM150, TM31, VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Integer16	**Dyn. index:** -	**Func. diagram:** 2468
	P-Group: Communications	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the connector-binector converter.

A PZD receive word can be selected as signal source. The signals are available to be serially passed-on (interconnection).

Dependency: Refer to: r2094, r2095

Note: From the signal source set via the connector input, the corresponding lower 16 bits are converted.

p2099[0...1] together with r2094.0...15 and r2095.0...15 forms two connector-binector converters:

Connector input p2099[0] to binector output in r2094.0...15

Connector input p2099[1] to binector output in r2095.0...15

p2100[0...19] Change fault response fault number / Chng resp F_no

All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Selects the faults for which the fault response should be changed

Dependency: The fault is selected and the required response is set under the same index.

Refer to: p2101

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chng resp resp

B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8050, 8075

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	2	0

Description: Sets the fault response for the selected fault.

Value:
0: NONE
1: OFF1
2: OFF2

Dependency: The fault is selected and the required response is set under the same index.

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:

- Fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- Fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chng resp resp

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL

Can be changed: U, T	**Calculated:** -	**Access level:** 3

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	0	0

Description: Sets the fault response for the selected fault.

Value: 0: NONE

Dependency: The fault is selected and the required response is set under the same index.

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:

- Fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- Fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chng resp resp

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	7	0

Description: Sets the fault response for the selected fault.

Value:
0: NONE
1: OFF1
2: OFF2
3: OFF3
5: STOP2
6: Internal armature short-circuit / DC braking
7: ENCODER (p0491)

Dependency: The fault is selected and the required response is set under the same index.

Refer to: p2100

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:

- Fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- Fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

The fault response can only be changed for faults with the appropriate identification (see the List Manual, chapter "Faults and alarms").

Example:

F12345 and fault response = OFF3 (OFF1, OFF2, NONE)

--> The default fault response OFF3 can be changed to OFF1, OFF2 or NONE.

Re value = 1 (OFF1):

Braking along the ramp-function generator down ramp followed by a pulse inhibit.

Re value = 2 (OFF2):

Internal/external pulse inhibit.

Re value = 3 (OFF3):

Braking along the OFF3 down ramp followed by a pulse inhibit.

Re value = 5 (STOP2):

n_set = 0

Re value = 6 (armature short-circuit, internal/DC braking):
The value can only be set for all motor data sets when p1231 = 3, 4.
a) For synchronous motors (p0300 = 2xx, 4xx), an internal armature short-circuit is executed.
b) For induction motors (p0300 = 1xx), a DC braking is initiated.
Re value = 7 (ENCODER (p0491)):
The fault response set in p0491 is executed if applicable.
Note:
IASC: Internal Armature Short Circuit
DCBRK: DC braking

p2102 BI: Acknowledge all faults / Ackn all faults

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Description: Sets the signal source for external fault 3.

External fault 3 is initiated by the following AND logic operation:

- BI: p2108 negated
- BI: p3111
- BI: p3112 negated

Dependency: Refer to: p3110, p3111, p3112

Note: An external fault is triggered with a 1/0 signal.
If this fault is output at the Control Unit, then it is transferred to all existing drive objects.

r2109[0...63] Fault time removed in milliseconds / t_flt resolved ms

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8050, 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the fault was removed.
Dependency: Refer to: r0945, r0947, r0948, r0949, r2114, r2130, r2133, r2136, r3115, r3120, r3122
Notice: The time comprises r2136 (days) and r2109 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.

r2110[0...63] Alarm number / Alarm number

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: This parameter is identical to r2122.

p2111 Alarm counter / Alarm counter

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Number of alarms that have occurred after the last reset.
Dependency: When p2111 is set to 0, the following is initiated:
- all of the alarms of the alarm buffer that have gone [0...7] are transferred into the alarm history [8...63].
- the alarm buffer [0...7] is deleted.
Refer to: r2110, r2122, r2123, r2124, r2125
Note: The parameter is reset to 0 at POWER ON.

p2112[0...n] BI: External alarm 1 / External alarm 1

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2546
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for external alarm 1.
Note: An external alarm is triggered with a 1/0 signal.

p2112 — BI: External alarm 1 / External alarm 1

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for external alarm 1.

Note: An external alarm is triggered with a 1/0 signal.

r2114[0...1] — System runtime total / Sys runtime tot

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the total system runtime for the drive unit.
The time comprises r2114[0] (milliseconds) and r2114[1] (days).
After r2114[0] has reached a value of 86.400.000 ms (24 hours) this value is reset and r2114[1] is incremented.

Index: [0] = Milliseconds
[1] = Days

Dependency: Refer to: r0948, r2109, r2123, r2125, r2130, r2136, r2145, r2146

Note: The time in r2114 is used to display the times for faults and alarms.
When the electronic power supply is switched out, the counter values are saved.
After the drive unit is powered up, the counter continues to run with the last value that was saved.

p2116[0...n] — BI: External alarm 2 / External alarm 2

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2546
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for external alarm 2.

Note: An external alarm is triggered with a 1/0 signal.

p2116 — BI: External alarm 2 / External alarm 2

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL

Can be changed: U, T	**Calculated:** -	**Access level:** 3

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the signal source for external alarm 3.

Note: An external alarm is triggered with a 1/0 signal.

p2118[0...19]	**Change message type message number / Chng type msg_no**		
All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Selects faults or alarms for which the message type should be changed.

Dependency: Selects the fault or alarm selection and sets the required type of message realized under the same index.

Refer to: p2119

Note: Re-parameterization is also possible if a message is present. The change only becomes effective after the message has gone.

p2119[0...19]	**Change message type type / Change type type**		
All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	3	1

Description: Sets the message type for the selected fault or alarm.

Value:
1: Fault (F)
2: Alarm (A)
3: No message (N)

Dependency: Selects the fault or alarm selection and sets the required type of message realized under the same index.

Refer to: p2118

Note: Re-parameterization is also possible if a message is present. The change only becomes effective after the message has gone.

The message type can only be changed for messages with the appropriate identification (exception, value = 0).

Example:

F12345(A) --> Fault F12345 can be changed to alarm A12345.

In this case, the message number that may be possibly entered in p2100[0...19] and p2126[0...19] is automatically removed.

r2120 CO: Sum of fault and alarm buffer changes / Sum buffer changed

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the sum of all of the fault and alarm buffer changes in the drive unit.

Dependency: Refer to: r0944, r2121

r2121 CO: Counter alarm buffer changes / Alrm buff changed

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: This counter is incremented every time the alarm buffer changes.

Dependency: Refer to: r2110, r2122, r2123, r2124, r2125

r2122[0...63] Alarm code / Alarm code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the number of alarms that have occurred.

Dependency: Refer to: r2110, r2123, r2124, r2125, r2134, r2145, r2146, r3121, r3123

Notice: The properties of the alarm buffer should be taken from the corresponding product documentation.

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

Alarm buffer structure (general principle):

r2122[0], r2124[0], r2123[0], r2125[0] --> alarm 1 (the oldest)

. . .

r2122[7], r2124[7], r2123[7], r2125[7] --> Alarm 8 (the latest)

When the alarm buffer is full, the alarms that have gone are entered into the alarm history:

r2122[8], r2124[8], r2123[8], r2125[8] --> Alarm 1 (the latest)

. . .

r2122[63], r2124[63], r2123[63], r2125[63] --> alarm 56 (the oldest)

r2123[0...63] Alarm time received in milliseconds / t_alarm recv ms

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8050, 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the alarm occurred.

Dependency: Refer to: r2110, r2114, r2122, r2124, r2125, r2134, r2145, r2146, r3121, r3123

Notice: The time comprises r2145 (days) and r2123 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r2124[0...63]	Alarm value / Alarm value		
All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 8050, 8065
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays additional information about the active alarm (as integer number).

Dependency: Refer to: r2110, r2122, r2123, r2125, r2134, r2145, r2146, r3121, r3123

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r2125[0...63]	Alarm time removed in milliseconds / t_alarm res ms		
All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8050, 8065
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the alarm was cleared.

Dependency: Refer to: r2110, r2114, r2122, r2123, r2124, r2134, r2145, r2146, r3121, r3123

Notice: The time comprises r2146 (days) and r2125 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.

p2126[0...19]	Change acknowledge mode fault number / Chng ackn F_no		
All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Selects the faults for which the acknowledge mode is to be changed

Dependency: Selects the faults and sets the required acknowledge mode realized under the same index
Refer to: p2127

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2127[0...19]	Change acknowledge mode mode / Chng ackn mode		
All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	3	1

Description: Sets the acknowledge mode for selected fault.

Value:
1: Acknowledgment only using POWER ON
2: Ack IMMEDIATELY after the fault cause has been removed
3: Acknowledgement only for PULSE INHIBIT

Dependency: Selects the faults and sets the required acknowledge mode realized under the same index
Refer to: p2126

Notice: It is not possible to re-parameterize the acknowledge mode for a fault in the following cases:
- Fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- Acknowledge mode is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

The acknowledge mode can only be changed for faults with the appropriate identification.

Example:

F12345 and acknowledge mode = IMMEDIATELY (POWER ON)

--> The acknowledge mode can be changed from IMMEDIATELY to POWER ON.

p2128[0...15] Faults/alarms trigger selection / F/A trigger sel

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8070
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the faults/alarms for which a trigger signal should be generated in r2129.0...15.

Dependency: If the fault/alarm set in p2128[0...15] occurs, then the particular binector output r2129.0...15 is set.

Refer to: r2129

r2129.0...15 CO/BO: Faults/alarms trigger signal / F/A trigger signal

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8070
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the trigger signals of the faults/alarms set in p2128[0...15].

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Trigger signal p2128[0]	ON	OFF	-
01	Trigger signal p2128[1]	ON	OFF	-
02	Trigger signal p2128[2]	ON	OFF	-
03	Trigger signal p2128[3]	ON	OFF	-
04	Trigger signal p2128[4]	ON	OFF	-
05	Trigger signal p2128[5]	ON	OFF	-
06	Trigger signal p2128[6]	ON	OFF	-
07	Trigger signal p2128[7]	ON	OFF	-
08	Trigger signal p2128[8]	ON	OFF	-
09	Trigger signal p2128[9]	ON	OFF	-
10	Trigger signal p2128[10]	ON	OFF	-
11	Trigger signal p2128[11]	ON	OFF	-
12	Trigger signal p2128[12]	ON	OFF	-
13	Trigger signal p2128[13]	ON	OFF	-
14	Trigger signal p2128[14]	ON	OFF	-
15	Trigger signal p2128[15]	ON	OFF	-

Dependency: If the fault/alarm set in p2128[0...15] occurs, then the particular binector output r2129.0...15 is set.

Refer to: p2128

Note: CO: r2129 = 0 --> None of the selected messages has occurred.

CO: r2129 > 0 --> At least one of the selected messages has occurred.

r2130[0...63] Fault time received in days / t_fault recv days

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the system runtime in days when the fault occurred.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2114, r2133, r2136, r3115, r3120, r3122

Notice: The time comprises r2130 (days) and r0948 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2131 CO: Actual fault code / Act fault code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the code of the oldest active fault.

Dependency: Refer to: r3131, r3132

Note: 0: No fault present.

r2132 CO: Actual alarm code / Actual alarm code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the code of the last alarm that occurred.

Note: 0: No alarm present.

r2133[0...63] Fault value for float values / Fault val float

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays additional information about the fault that occurred for float values.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2136, r3115

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2134[0...63] Alarm value for float values / Alarm value float

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8065
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays additional information about the active alarm for float values.

Dependency: Refer to: r2110, r2122, r2123, r2124, r2125, r2145, r2146, r3121, r3123

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2135.0...15 CO/BO: Status word faults/alarms 2 / ZSW fault/alarm 2

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2548
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Display and BICO output for the second status word of faults and alarms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fault encoder 1	Yes	No	-
01	Fault encoder 2	Yes	No	-
02	Fault encoder 3	Yes	No	-
12	Fault motor overtemperature	Yes	No	8016
13	Fault power unit thermal overload	Yes	No	8014
14	Alarm motor overtemperature	Yes	No	8016
15	Alarm power unit thermal overload	Yes	No	8014

r2136[0...63] Fault time removed in days / t_flt resolv days

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8060
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the system runtime in days when the fault was removed.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2114, r2130, r2133, r3115, r3120, r3122

Notice: The time comprises r2136 (days) and r2109 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2138.7...15 CO/BO: Control word faults/alarms / STW fault/alarm

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2546
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Display and BICO output for the control word of faults and alarms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
07	Acknowledge fault	Yes	No	8060
10	External alarm 1 (A07850) effective	Yes	No	8065
11	External alarm 2 (A07851) effective	Yes	No	8065
12	External alarm 3 (A07852) effective	Yes	No	8065

13	External fault 1 (F07860) effective	Yes	No	8060
14	External fault 2 (F07861) effective	Yes	No	8060
15	External fault 3 (F07862) effective	Yes	No	8060

Dependency: Refer to: p2103, p2104, p2105, p2106, p2107, p2108, p2112, p2116, p2117, p3110, p3111, p3112

r2139.0...15 CO/BO: Status word faults/alarms 1 / ZSW fault/alarm 1

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2548
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for status word 1 of faults and alarms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Being acknowledged	Yes	No	-
01	Acknowledgment required	Yes	No	-
03	Fault present	Yes	No	8060
05	Safety message present	Yes	No	-
06	Internal message 1 present	Yes	No	-
07	Alarm present	Yes	No	8065
08	Internal message 2 present	Yes	No	-
11	Alarm class bit 0	High	Low	-
12	Alarm class bit 1	High	Low	-
13	Maintenance required	Yes	No	-
14	Maintenance urgently required	Yes	No	-
15	Fault gone/can be acknowledged	Yes	No	-

Note: Re bit 03, 05, 07:

These bits are set if at least one fault/alarm occurs. Data is entered into the fault/alarm buffer with delay. This is the reason that the fault/alarm buffer should only be read if, after "fault present" or "alarm present" has occurred, a change in the buffer was also detected (r0944, r9744, r2121).

Re bit 06, 08:

These status bits are used for internal diagnostic purposes only.

Re bit 12, 11:

These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.

p2140[0...n] Hysteresis speed 2 / n_hysteresis 2

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	300.00 [rpm]	90.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the following signals:

"|n_act| < = speed threshold value 2" (BO: r2197.1)

"|n_act| > speed threshold value 2" (BO: r2197.2)

Dependency: Refer to: p2155, r2197

p2141[0...n] Speed threshold 1 / n_thresh val 1

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	5.00 [rpm]

Description: Sets the speed threshold value for the signal "f or n comparison value reached or exceeded" (BO: r2199.1).

Dependency: Refer to: p2142, r2199

p2142[0...n] Hysteresis speed 1 / n_hysteresis 1

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	300.00 [rpm]	2.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the signal "f or n / v comparison value reached or exceeded" (BO: r2199.1).

Dependency: Refer to: p2141, r2199

p2144[0...n] BI: Motor stall monitoring enable (negated) / Mot stall enab neg

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 8012
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the negated enable (0 = enable) of the motor stall monitoring.

Dependency: Refer to: p2163, p2164, p2166, r2197, r2198

Note: When interconnecting the enable signal with r2197.7 then the stall signal is suppressed if there is no speed setpoint - actual value deviation.

r2145[0...63] Alarm time received in days / t_alarm recv days

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the system runtime in days when the alarm occurred.

Dependency: Refer to: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2146, r3121, r3123

Notice: The time comprises r2145 (days) and r2123 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2146[0...63]	Alarm time removed in days / t_alarm res days		
All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the system runtime in days when the alarm was cleared.

Dependency: Refer to: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2145, r3121, r3123

Notice: The time comprises r2146 (days) and r2125 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

p2147	Delete fault buffer of all drive objects / Del fault buffer		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8060
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	0

Description: Setting to delete the fault buffer of all existing drive objects.

Value:
0: Inactive
1: Start to delete the fault buffer of all drive objects

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136

Note: p2147 is automatically set to 0 after execution.

p2148[0...n]	BI: RFG active / RFG active		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 8011
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the signal "ramp-function generator active" for the following signals/messages:
"Speed setpoint - actual value deviation within tolerance t_on" (BO: r2199.4)
"Ramp-up/ramp-down completed" (BO: r2199.5)

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The binector input is automatically pre-assigned to r1199.2.
The following applies for SERVO:
The pre-assignment using the automatic calculation of the motor/control parameters in the drive (p0340 = 1, 3, 5) is only realized if, at the instant of the calculation, the "setpoint channel" function module is active (r0108.8 = 1). If the calculation in p0340 is not selected when downloading parameters, then the parameter is not preassigned.

p2149[0...n]	Monitoring configuration / Monit config		
VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Messages	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0000 0000 0000 0001 bin

Description: Sets the configuration for messages and monitoring functions.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Enable alarm A07903	Yes	No	8011
01	Load monitoring only in the 1st quadrant	Yes	No	8013
03	Reserved			-
15	Automatic parameterization carried out (p0340 = 1, p3900 > 0)	Yes	No	-

Dependency: Refer to: r2197

Note: Re bit 00:

Alarm A07903 is output when the bit is set with r2197.7 = 0 (n_set <> n_act).

Re bit 01:

When the bit is set, load monitoring is only carried out in the 1st quadrant as a result of the positive characteristic parameters (p2182 ... p2190).

Re bit 03:

When the bit is set, r2197.1 and r2197.2 are determined using separate hysteresis functions.

Re bit 15:

The bit indicates whether the automatic parameterization (p0340 = 1, p3900 > 0) for the parameters of the extended monitoring functions was carried out.

If the bit is not set (e.g. when the configuration is activated (p0108.15)), the parameterization is automatically carried out during booting even if r3925.0 is already 1.

p2150[0...n] Hysteresis speed 3 / n_hysteresis 3

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010, 8011
P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	300.00 [rpm]	2.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the following signals:

"|n_act| < speed threshold value 3" (BO: r2199.0)

"n_set >= 0" (BO: r2198.5)

"n_act >= 0" (BO: r2197.3)

Dependency: Refer to: p2161, r2197, r2199

p2151[0...n] CI: Speed setpoint for messages/signals / n_set for msg

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3

Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for speed setpoint 2.

The sum of p2151 and p2154 is used for the following messages/signals:

"Speed setpoint - actual value deviation within tolerance t_off" (r2197.7)

"Speed setpoint - actual value deviation within tolerance t_on" (r2199.4)

"Ramp-up/ramp-down completed" (r2199.5)

Dependency: Refer to: p2151, r2197, r2199

p2155[0...n] Speed threshold 2 / n_thresh val 2

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	900.00 [rpm]

Description: Sets the speed threshold value for the following messages:

"|n_act| < = speed threshold value 2" (BO: r2197.1)

"|n_act| > speed threshold value 2" (BO: r2197.2)

Dependency: Refer to: p2140, r2197

p2156[0...n] On delay comparison value reached / t_on cmpr val rchd

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [ms]	10000.0 [ms]	0.0 [ms]

Description: Sets the switch-in delay time for the signal "comparison value reached" (BO: r2199.1).

Dependency: Refer to: p2141, p2142, r2199

p2161[0...n]	Speed threshold 3 / n_thresh val 3		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010, 8011
	P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rpm]	210000.00 [rpm]	5.00 [rpm]

Description: Sets the speed threshold value for the signal "|n_act| < speed threshold value 3" (BO: r2199.0).

Dependency: Refer to: p2150, r2199

p2162[0...n]	Hysteresis speed n_act > n_max / Hyst n_act>n_max		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
	P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [rpm]	60000.00 [rpm]	0.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the signal "n_act > n_max" (BO: r2197.6).

Dependency: Refer to: r1084, r1087, r2197

Notice: For p0322 = 0, the following applies: p2162 <= 0.1 * p0311

For p0322 > 0, the following applies: p2162 <= 1.02 * p0322 - p1082

If one of the conditions is violated, p2162 is appropriately and automatically reduced when exiting the commissioning mode.

Note: For a negative speed limit (r1087) the hysteresis is effective below the limit value and for a positive speed limit (r1084) above the limit value.

If significant overshoot occurs in the maximum speed range (e.g. due to load shedding), you are advised to increase the dynamic response of the speed controller (if possible). If this is insufficient, the hysteresis p2162 can only be increased by more than 10% of the rated speed when the maximum speed (p0322) of the motor is sufficiently greater than the speed limit p1082.

p2163[0...n]	Speed threshold 4 / n_thresh val 4		
VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8011

	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output of the smoothed speed actual value for messages.

Dependency: Refer to: p2153

p2174[0...n] Torque threshold value 1 / M_thresh val 1

VECTOR_G			
	Can be changed: U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
	P-Group: Messages	**Units group:** 7_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Nm]	20000000.00 [Nm]	5.13 [Nm]

Description: Sets the torque threshold value for the messages:

"Torque setpoint < torque threshold value 1 and n_set reached" (BO: r2198.9)

"Torque setpoint < torque threshold value 1" (BO: r2198.10)

"Torque setpoint > torque threshold value 1" (BO: r2198.13)

Dependency: Refer to: p2195, r2198

p2175[0...n] Motor blocked speed threshold / Mot lock n_thresh

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	120.00 [rpm]

Description: Sets the speed threshold for the message "Motor blocked" (BO: r2198.6).

Dependency: Refer to: p0500, p2177, r2198

Note: The following applies for encoderless vector control for induction motors:

At low speeds in open-loop speed controlled operation (see p1755, p1756), a blocked motor cannot be detected.

The following applies for encoderless vector control for permanent magnet synchronous motors:

At low speeds in open-loop speed controlled operation (see p1755, p1756), a blocked motor can only be detected if p2175 = p1755, and p1750.6 is set to 1.

p2177[0...n] Motor blocked delay time / Mot lock t_del

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	65.000 [s]	1.000 [s]

Description: Sets the delay time for the message "Motor blocked" (BO: r2198.6).

Dependency: Refer to: p0500, p2175, r2198

Note: The following applies for sensorless vector control:

At low speeds a locked motor can only be detected if no change is made to open-loop speed controlled operation. If this is the case, the value in p2177 must be reduced accordingly (p2177 < p1758) before time p2177 has elapsed in order to detect the locked state reliably.

As countermeasure, it is generally also possible to set p1750.6. This is only not permitted if the drive is slowly reversed by the load at the torque limit (speed below p1755 for longer than p1758).

p2178[0...n] Motor stalled delay time / Mot stall t_del

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	10.000 [s]	0.010 [s]

Description: Sets the delay time for the message "Motor stalled" (BO: r2198.7).

Dependency: Refer to: r2198

p2181[0...n] Load monitoring response / Load monit resp

VECTOR_G (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	0

Description: Sets the response when evaluating the load monitoring.

Value:
0: Load monitoring disabled
1: A07920 for torque/speed too low
2: A07921 for torque/speed too high
3: A07922 for torque/speed out of tolerance
4: F07923 for torque/speed too low
5: F07924 for torque/speed too high
6: F07925 for torque/speed out of tolerance

Dependency: Refer to: p2182, p2183, p2184, p2185, p2186, p2187, p2188, p2189, p2190, p2192, r2198

Note: The response to the faults F07923 ... F07925 can be set.
This parameter setting has no effect on the production of fault F07936.

p2182[0...n] Load monitoring speed threshold value 1 / n_thresh 1

VECTOR_G (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Units group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	150.00 [rpm]

Description: Sets the speed/torque envelope curve for load monitoring.
The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:
p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)
p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)
p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)

Dependency: The following applies: p2182 < p2183 < p2184
Refer to: p2183, p2184, p2185, p2186

Note: In order that the load monitoring can reliably respond, the speed threshold p2182 should always be set lower than the minimum motor speed to be monitored.

p2183[0...n] Load monitoring speed threshold value 2 / n_thresh 2

VECTOR_G (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8013

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	1500.00 [rpm]

Description: Sets the speed/torque envelope curve for load monitoring.
The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:
p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)
p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)
p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)

Dependency: The following applies: p2182 < p2183 < p2184

Refer to: p2182, p2183, p2189, p2190

Note: In order that the load monitoring can reliably respond, the speed threshold p2184 should always be set higher than the maximum motor speed to be monitored.

p2185[0...n] Load monitoring torque threshold 1 upper / M_thresh 1 upper

VECTOR_G (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Units group:** 7_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Nm]	20000000.00 [Nm]	10000000.00 [Nm]

Description: Sets the speed/torque / velocity/force envelope curve for the load monitoring.

Dependency: The following applies: p2185 > p2186

Refer to: p2182, p2186

Note: The upper envelope curve is defined by p2185, p2187 and p2189.

p2186[0...n] Load monitoring torque threshold 1 lower / M_thresh 1 lower

VECTOR_G (Ext msg)

P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the scaling factor for torque utilization (r0033).

r2197.1...13 CO/BO: Status word monitoring 1 / ZSW monitor 1

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2534
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the first status word of the monitoring functions.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	|n_act| <= speed threshold value 2 p2155	Yes	No	8010
02	|n_act| > speed threshold value 2 p2155	Yes	No	8010
03	n_act >= 0	Yes	No	8011
06	|n_act| > n_max	Yes	No	8010
07	Speed setp - act val deviation in tolerance t_off	Yes	No	8011
13	|n_act| > n_max (F07901)	Yes	No	-

Note: Re bit 01, 02:

The threshold value is set in p2155 and the hysteresis in p2140.

Re bit 03:

The hysteresis is set in p2150.

Re bit 06:

The hysteresis is set in p2162.

Re bit 07:

The threshold value is set in p2163 and the hysteresis is set in p2164.

Re bit 13:

Only for internal Siemens use.

r2198.4...12 CO/BO: Status word monitoring 2 / ZSW monitor 2

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2536
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the second status word of the monitoring functions.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
04	|n_set| < p2161	Yes	No	8011
05	n_set > 0	Yes	No	8011
06	Motor blocked	Yes	No	8012
07	Motor stalled	Yes	No	8012
10	|M_set| < torque threshold value 1	Yes	No	8012
11	Load monitoring signals an alarm	Yes	No	8013
12	Load monitoring signals a fault condition	Yes	No	8013

Note: Re bit 10:

The torque threshold value 1 is set in p2174.

Re bit 12:

This bit is reset after the fault cause disappears, even if the fault itself is still present.

r2199.0...12 CO/BO: Status word monitoring 3 / ZSW monitor 3

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2537
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the third status word of the monitoring functions.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	|n_act| < speed threshold value 3	Yes	No	8010
01	f or n comparison value reached or exceeded	Yes	No	8010
04	Speed setp - act val deviation in tolerance t_on	Yes	No	8011
05	Ramp-up/ramp-down completed	Yes	No	8011
06	Current below the zero current threshold	Yes	No	8018
07	Speed deviation model/external in tolerance	Yes	No	8012
11	Torque utilization < torque threshold value 2	Yes	No	8012
12	Excitation current outside the tolerance range	Yes	No	8018

Note: Re bit 00:

The speed threshold value 3 is set in p2161.

Re bit 01:

The comparison value is set in p2141. We recommend setting the hysteresis (p2142) for canceling the bit to a value lower than that in p2141. Otherwise, the bit is not reset.

Re bit 11:

The torque threshold value 2 is set in p2194.

p2200[0...n] BI: Technology controller enable / Tec_ctrl enable

Description: Displays the number of the selected fixed setpoint of the technology controller.

Dependency: Refer to: r2224

p2230[0...n] Technology controller motorized potentiometer configuration / Tec_ctr mop config

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7954
P-Group: Technology	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0100 bin

Description: Sets the configuration for the motorized potentiometer of the technology controller.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Data save active	Yes	No	-
02	Initial rounding-off active	Yes	No	-
03	Non-volatile data save active for p2230.0 = 1	Yes	No	-
04	Ramp-function generator always active	Yes	No	-

Dependency: Refer to: r2231, p2240

Notice: The following prerequisites must be fulfilled in order to be able to save the setpoint in a non-volatile fashion:

- Firmware with V2.3 or higher.

- Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).

Note: Re bit 00:

0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p2240.

1: The setpoint for the motorized potentiometer is saved and after ON is entered using r2231. In order to save in a non-volatile fashion, bit 03 should be set to 1.

Re bit 02:

0: Without initial rounding-off

1: With initial rounding-off.

The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed). The jerk for initial rounding is independent of the ramp-up time and only depends on the selected maximum value (p2237).

It is calculated as follows:

r = 0.0001 x max(p2237, |p2238|) [%] / 0.13^2 [s^2]

The jerk is effective until the maximum acceleration is reached (a_max = p2237 [%] / p2247 [s] or a_max = p2238 [%] / p2248 [s]), after which the drive continues to run linearly with constant acceleration.

The higher the maximum acceleration (the lower that p2247 is), the longer the ramp-up time increases with respect to the set ramp-up time.

Re bit 03:

0: Non-volatile data save de-activated.

1. The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for p2230.0 = 1).

Re bit 04:

When the bit is set, the ramp-function generator is computed independent of the pulse enable. The actual output value of the motorized potentiometer is always in r2250.

r2231 Technology controller motorized potentiometer setpoint memory / Tec_ctrl mop mem

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7954

Description: Displays the effective setpoint after the internal ramp-function generator for the motorized potentiometer of the technology controller.

Dependency: Refer to: r2245

p2252 Technology controller configuration / Tec_ctrl config

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0111 bin

Description: Sets the configuration of the technology controller.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Ramp-up/down time independent of setpoint sign	Yes	No	-
01	Integrator independent of Kp	Yes	No	-
02	Output signal without ramp active	Yes	No	-
03	Actual value limiting	Yes	No	-

Dependency: Refer to: p2257, p2258, p2267, p2268, p2280, p2285

Note: Re bit 00 = 0:

The ramp-down time (p2258) switches to the ramp-up time (p2257) when the sign for the output signal r2260 changes. When the sign changes, the output signal is kept at zero for one arithmetic cycle.

Re bit 00 = 1:

When r2260 exhibits a positive gradient, the ramp-up time (p2257) is active; when it exhibits a negative gradient, the ramp-down time (p2258) is active. The sign for r2260 does not have any effect on the ramp time.

Re bit 01 = 0:

The integration time of the PID controller is evaluated with the gain factor Kp (p2280) (p2285 = integral time).

Re bit 01 = 1:

The integration time of the PID controller is independent of the gain factor (p2285 = integration time) if p2280 > 0.

Re bit 02 = 0:

When the PID controller is de-activated via p2200, the output signal r2294 is reduced to zero via the ramp-down time p2293.

Re bit 02 = 1:
When the PID controller is de-activated via p2200, the output signal r2294 is set directly to zero.
Re bit 03 = 0:
The actual values are not limited by p2267 and p2268.
Re bit 03 = 1:
The actual values are limited by p2267 and p2268.

Min	**Max**	**Factory setting**
0	3	0

Description: Setting to use an arithmetic function for the actual value signal of the technology controller.

Value:
0: No function
1: Root function (root from x)
2: Square function (x * x)
3: Cube function (x * x * x)

Dependency: Refer to: p2264, p2265, p2267, p2268, p2269, p2271

p2271 Technology controller actual value inversion (sensor type) / Tech_ctrl act inv

VECTOR_G (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 7958
P-Group: Technology	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to invert the actual value signal of the technology controller.
The inversion depends on the sensor type for the actual value signal.

Value:
0: No inversion
1: Inversion actual value signal

Caution: ⚠ If the actual value inversion is incorrectly selected, then the closed-loop control with the technology controller can become unstable and can oscillate!

Note: The correct setting can be determined as follows:
- inhibit the technology controller (p2200 = 0).
- increase the motor speed and in so doing, measure the actual value signal of the technology controller.
--> If the actual value increases as the motor speed increases, then p2271 should be set to 0 (no inversion).
--> If the actual value decreases as the motor speed increases, then p2271 should be set to 1 (the actual value signal is inverted).

Description: Sets the signal source for the offset of the output limiting of the technology controller.

p2306 Technology controller fault signal inversion / Tec_ctrl fault inv

VECTOR_G (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 7958
P-Group: Technology	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to invert the fault signal of the technology controller.
The setting depends on the type of control loop.

Value:
0: No inversion
1: Inversion

Caution: If the actual value inversion is incorrectly selected, then the closed-loop control with the technology controller can become unstable and can oscillate!

Note: The correct setting can be determined as follows:
- inhibit the technology controller (p2200 = 0).
- increase the motor speed and in so doing, measure the actual value signal (of the technology controller).
- if the actual value increases with increasing motor speed, then the inversion should be switched out.
- if the actual value decreases with increasing motor speed, then the inversion should be set.

If value = 0:
The drive reduces the output speed when the actual value rises (e.g. for heating fans, intake pump, compressor).
If value = 1:
The drive increases the output speed when the actual value increases (e.g. for cooling fans, discharge pumps).

r2349.0...11 CO/BO: Technology controller status word / Tec_ctrl status

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 3

Description: Connector output of the reference quantity p2003 for torque (r0108.12 = 0) or force (r0108.12 = 1).

All torques specified as relative values (r0108.12 = 0) or forces (r0108.12 = 1) are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

The unit of this parameter is the same as the unit selected for p2003.

Dependency: p0505, r0108.12

Refer to: p2003

Note: This BICO parameter provides the numerical value of the reference quantity p2003 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC. This BICO parameter is not suitable for interconnecting for cyclic communication.

r2704 CO: Reference power / Reference power

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3

P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Connector output of the reference quantity for powers p2004.

All power ratings specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

The unit of this parameter is the same as the unit selected for p2004.

Dependency: This value is calculated as voltage x current for the infeed and as torque x speed for closed-loop controls.

Refer to: r2004

Note: This BICO parameter provides the numerical value of the reference quantity p2004 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC. This BICO parameter is not suitable for interconnecting for cyclic communication.

The reference power is calculated as follows:

- 2 * Pi * reference speed / 60 * reference torque (motor)

- reference voltage * reference current * root(3) (infeed)

r2705 CO: Reference angle / Reference angle

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3

-	-	-

Description: Connector output of the reference quantity for angles p2005.

All angles specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

This parameter has the unit degree.

Dependency: Refer to: p2005

Note: This BICO parameter provides the numerical value of the reference quantity p2005 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC. This BICO parameter is not suitable for interconnecting for cyclic communication.

r2706 CO: Reference temp / Reference temp

B_INF, TM150, TM31, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Connector output of the reference quantity for temperatures.

All temperatures specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

This parameter has the unit degree Celsius.

Note: This BICO parameter provides the numerical value of the reference quantity for the temperature as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC. This BICO parameter is not suitable for interconnecting for cyclic communication.

r2707 CO: Reference acceleration / Ref accel

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	4194303	0

Description: Sets the number of rotations that can be resolved for a rotary absolute encoder with activated position tracking of the load gear.

Dependency: This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking of the load gear (p2720.0 = 1).

Note: The resolution that is set must be able to be represented using r2723.

For rotary axes/modulo axes, the following applies:

This parameter is pre-set with p0421 when activating position tracking and can be changed.

For linear axes, the following applies:

This parameter is pre-assigned with p0421 when activating position tracking, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.

p2722[0...n] Load gear position tracking tolerance window / Pos track tol

VECTOR_G			
	Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00	4294967300.00	0.00

Description: Sets a tolerance window for position tracking.

After the system is powered up, the difference between the saved position and the actual position is determined, and depending on this, the following is initiated:

Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value.

Difference outside the tolerance window --> An appropriate message is output.

Caution: Rotation, e.g. through a complete encoder range is not detected.

Note: The value is entered in integer (complete) encoder pulses.

For p2720.0 = 1, the value is automatically pre-assigned quarter of the encoder range.

Example:

Quarter of the encoder range = (p0408 * p0421) / 4

It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

r2723[0...n] **CO: Load gear absolute value / Load gear abs_val**

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4010, 4704
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the absolute value after the load gear.

Notice: The encoder position actual value must be requested using the encoder control word Gn_STW.13.

Note: The increments are displayed in the format the same as r0483.

r2724[0...n] **CO: Load gear position difference / Load gear pos diff**

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the position difference before the load gear between powering down and powering up.

Note: The increments are displayed in the same format as for r0483/r2723.

If the measuring gear of the motor encoder is not activated, the position difference should be read in encoder increments.

If the measuring gear of the motor encoder is activated, the position difference is converted using the measuring gear factor.

p2810[0...1] **BI: AND logic operation inputs / AND inputs**

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 2634

	Min	**Max**	**Factory setting**
	-100000.00 [Nm]	100000.00 [Nm]	0.00 [Nm]

Description: Setting and connector output for a fixed torque value.

Dependency: Refer to: p2900, p2901, r2902

Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.

Note: The value can, for example, be used to interconnect a supplementary torque.

r2969[0...6] Direct axis flux model display / Mot Psid trace

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: ASM, PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Display of the direct axis flux model of the closed-loop controlled reluctance motor for diagnostic purposes:

Display of the entered direct axis current id:
idx0: current in Arms
Display of the saturation curves of the direct axis flux psid(id, iq):
idx1: flux in Vsrms with respect to the direct axis current for iq = 0
idx2: flux in Vsrms with respect to the direct axis current for iq = 0.5 * p2950
idx3: flux in Vsrms with respect to the direct axis current for iq = p2950

Displays the relative error of the current inversion(id(psid, iq) - id) / p2950:

idx4: error with respect to direct axis current for iq = 0

idx5: error with respect to direct axis current for iq = 0.5 * p2950

idx6: error with respect to direct axis current for iq = p2950

Index: [0] = d-current
[1] = d-flux iq0
[2] = d-flux iq1
[3] = d-flux iq2
[4] = d-current error iq0
[5] = d-current error iq1
[6] = d-current error q2

Note: The display is only generated when the pulses are inhibited.

p3100 RTC time stamp mode / RTC t_stamp mode

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	2

Description: Sets the mode for the time stamp

p3100 = 0: Time stamp, operating hours

p3100 = 1: Time stamp, UTC format

p3100 = 2: Time stamp, operating hours + 01.01.2000

Notice: The realtime format (p3100 = 1), once selected, remains until the next time that the system is switched off. Switching back to operating hours (p3100 = 0) or operating hours + 01.01.2000 (p3100=2) is prevented.

Note: RTC: Real-time clock

UTC: Universal Time Coordinates

The UTC time started, according to the definition on 01.01.1970 at 00:00:00 and is output in days and milliseconds.

p3101[0...1] RTC set UTC time / RTC set UTC

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3

r3113.0...15 CO/BO: NAMUR message bit bar / NAMUR bit bar

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the status of the NAMUR message bit bar.
The faults and alarms are assigned to the appropriate signaling/message classes and influence a specific message bit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fault converter information electronics/software error	Yes	No	-
01	Network fault	Yes	No	-
02	DC link overvoltage	Yes	No	-
03	Fault drive converter power electronics	Yes	No	-
04	Drive converter overtemperature	Yes	No	-
05	Ground fault	Yes	No	-
06	Motor overload	Yes	No	-
07	Bus error	Yes	No	-
08	External safety-relevant shutdown	Yes	No	-
09	Mot encoder fault	Yes	No	-
10	Error communication internal	Yes	No	-
11	Fault infeed	Yes	No	-
15	Other faults	Yes	No	-

Note: Re bit 00:

Hardware or software malfunction was identified. Carry out a POWER ON of the component involved. If it occurs again, contact the hotline.

Re bit 01:

A line supply fault has occurred (phase failure, voltage level, ...). Check the line supply / fuses. Check the supply voltage. Check the wiring.

Re bit 02:

The DC link voltage has assumed an inadmissibly high value. Check the dimensioning of the system (line supply, reactor, voltages). Check the infeed settings.

Re bit 03:

An inadmissible operating state of the power electronics was identified (overcurrent, overtemperature, IGBT failure, ...). Check that the permissible load cycles are maintained. Check the ambient temperatures (fan).

Re bit 04:

The temperature in the component has exceeded the highest permissible limit. Check the ambient temperature / control cabinet cooling.

Re bit 05:

A ground fault / inter-phase short-circuit was detected in the power cables or in the motor windings. Check the power cable (connection). Check the motor.

Re bit 06:

The motor was operated outside the permissible limits (temperature, current, torque, ...). Check the load cycles and limits that have been set. Check the ambient temperature / motor cooling.

Re bit 07:

The communication to the higher-level control system (internal coupling, PROFIBUS, PROFINET, ...) is faulted or interrupted. Check the state of the higher-level control system. Check the communication connection/wiring. Check the bus configuration / clock cycles.

Re bit 08:

A safety operation monitoring function (Safety) has detected an error.

Re bit 09:

When evaluating the encoder signals (track signals, zero marks, absolute values, ...) an illegal signal state was detected. Check the encoder / state of the encoder signals. Observe the maximum frequencies.

Re bit 10:

The internal communication between the SINAMICS components is faulted or interrupted. Check the DRIVE-CLiQ wiring. Ensure an EMC-compliant design. Observe the maximum permissible quantity structure / clock cycles.

Re bit 11:

The infeed is faulted or has failed. Check the infeed and the surroundings (line supply, filter, reactors, fuses, ...). Check the closed-loop infeed control.

Re bit 15:

Group fault. Determine the precise cause of the fault using the commissioning tool.

r3114.9...11 CO/BO: Messages status word global / Msg ZSW global

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -

P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the drive object number of the initiating drive object for this fault as integer number.

Value = 63:

The fault was initiated by the drive object itself.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3120, r3122

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the fault buffer and the assignment of the indices is shown in r0945.

p3116 BI: Acknowledgement automatically suppressed / Ackn suppress

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the automatic acknowledgement on the device drive object.

BI: p3116 = 0 signal

Faults present are automatically acknowledged on the device drive object. Local device faults are forwarded to the first active drive object.

BI: p3116 = 1 signal

Faults present are not automatically acknowledged on the device drive object. Local device faults are not forwarded.

Dependency: Refer to: p2102, p2103, p2104, p2105, p3981

Note: When selecting a standard telegram, the BICO interconnection for control signal STW1.10 (master control by PLC) is automatically established.

p3117 Change safety message type / Ch. SI mess type

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1(1)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the re-parameterization of all safety messages for faults and alarms.

The relevant message type during changeover is selected by the firmware.

0: Safety messages are not re-parameterized

1: Safety messages are re-parameterized

Note: A change only becomes effective after a POWER ON.

r3120[0...63] Component fault / Comp fault

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the component of the fault which has occurred.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3122

Note: Value = 0: Assignment to a component not possible.

The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the fault buffer and the assignment of the indices is shown in r0945.

r3121[0...63] Component alarm / Comp alarm

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the component of the alarm which has occurred.

Dependency: Refer to: r2110, r2122, r2123, r2124, r2125, r2134, r2145, r2146, r3123

Note: Value = 0: Assignment to a component not possible.

The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r3122[0...63] Diagnostic attribute fault / Diag_attr fault

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the diagnostic attribute of the fault which has occurred.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Hardware replacement recommended	Yes	No	-
15	Message has gone	Yes	No	-
16	PROFIdrive fault class bit 0	High	Low	-
17	PROFIdrive fault class bit 1	High	Low	-
18	PROFIdrive fault class bit 2	High	Low	-
19	PROFIdrive fault class bit 3	High	Low	-
20	PROFIdrive fault class bit 4	High	Low	-

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3120

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the fault buffer and the assignment of the indices is shown in r0945.

Re bits 20 ... 16:

Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 0 --> PROFIdrive message class 0: not assigned

r3131 CO: Actual fault value / Act fault val

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the fault value of the oldest active fault.

Dependency: Refer to: r2131, r3132

r3132 CO: Actual component number / Comp_no act

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the component number of the oldest fault that is still active.

Dependency: Refer to: r2131, r3131

p3135 Suppress active fault / Supp act flt

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 bin

Description: Sets the suppression of r2139.3 "Fault present" for certain fault responses.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
08	Suppression of fault response ENCODER	ON	OFF	-
10	Suppression of fault response NONE	ON	OFF	-

Dependency: Refer to: p0491, r2139

Note: Depending on the suppression of a fault reaction in this parameter, r2139.1 "Acknowledgement required" is set when at least one fault occurs.

Re bit 08:

The suppression is only effective if p0491 = 1.

p3201[0...n] Excitation current outside the tolerance threshold value / I_exc n Tol thresh

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [%]	100.0 [%]	10.0 [%]

Description: Sets the threshold value for the "excitation current outside tolerance" message for the excitation current monitoring.

If the absolute value of the difference between the excitation current setpoint and actual value (r1641 - r1626) exceeds the threshold value and the hysteresis is longer than the selected delay time, then fault F07913 is output.

This fault is withdrawn when the threshold voltage is undershot.

Dependency: Refer to: r1626, r1641, p3202, p3203

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).

p3202[0...n] Excitation current outside the tolerance hysteresis / I_exc n Tol hyst

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [%]	100.0 [%]	10.0 [%]

Description: Sets the hysteresis for the "excitation current outside tolerance" message for the excitation current monitoring.

Dependency: Refer to: p3201, p3203

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).

p3203[0...n] Excitation current outside the tolerance delay time / I_exc n Tol t_del

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	10.0 [s]	1.0 [s]

Description: Sets the delay time for the "excitation current outside tolerance" message for the excitation current monitoring.

Dependency: Refer to: p3201, p3202

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).

p3204[0...n] Flux outside the tolerance threshold value / Flux n tol thresh

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [%]	100.0 [%]	10.0 [%]

Description: Sets the threshold value for the "flux outside the tolerance" message for the flux monitoring.

If the absolute value of the difference between the flux setpoint and actual value (r0083 - r0084) falls below the threshold value with hysteresis longer than the selected delay time, then fault F07914 is output.

This fault is withdrawn when the threshold voltage is undershot.

Dependency: Refer to: r0083, r0084, p3205, p3206

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).

The flux monitoring is only active after magnetizing (r0056.4 = 1).

p3205[0...n] Flux outside the tolerance hysteresis / Flux n tol hyst

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [%]	50.0 [%]	10.0 [%]

Description: Sets the hysteresis for the "flux outside tolerance" message for the flux monitoring.

Dependency: Refer to: p3204, p3206

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).

The flux monitoring is only active after magnetizing (r0056.4 = 1).

p3206[0...n] Flux outside tolerance delay time / Flux n tol t_del

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	10.0 [s]	5.0 [s]

Description: Sets the delay time for the "flux outside tolerance" message for the flux monitoring.

Dependency: Refer to: p3204, p3205

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The flux monitoring is only active after magnetizing (r0056.4 = 1).

p3207[0...n] Zero current signal threshold value / I_0_sig thresh

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01 [Arms]	10000.00 [Arms]	1.00 [Arms]

Description: Sets the threshold value for the zero current signal for the zero current monitoring.
If the absolute current falls below the threshold value then r2199.6 is set to 1 after the delay time has expired. The bit is reset if the threshold value and the hysteresis are exceeded again.

Dependency: Refer to: r2199, p3208, p3209

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).

p3208[0...n] Zero current signal hysteresis / I_0_sig hyst

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01 [Arms]	10000.00 [Arms]	1.00 [Arms]

Description: Sets the hysteresis for the zero current signal for the zero current monitoring.

Dependency: Refer to: p3207, p3209

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).

p3209[0...n] Zero current signal delay time / I_0_sig t_del

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [s]	10.00 [s]	0.02 [s]

Description: Sets the delay time for the zero current signal for the zero current monitoring.

Dependency: Refer to: p3207, p3208

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The monitoring is only carried out for speeds less than the speed threshold in p2161 (r2199.0 = 1).

p3233[0...n] Torque actual value filter time constant / M_act_filt T

VECTOR_G (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	1000000 [ms]	0 [ms]

Description: Sets the time constant for the PT1 element to smooth the torque actual value.

The smoothed torque actual value is compared with the threshold values and is only used for messages and signals.

p3235 Phase failure signal motor monitoring time / Ph_fail t_monit

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	2000 [ms]	320 [ms]

Description: Sets the monitoring time for phase failure detection of the motor.

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: Monitoring is only effective for blocksize and booksize power units.

For p3235 = 0 the function is deactivated.

For VECTOR, the following applies:

The monitoring is automatically de-activated during the flying restart operation for a motor that is still rotating.

p3236[0...n] Speed threshold 7 / n_thresh val 7

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012

Description: For the energy-saving display of a fluid-flow machine, a typical flow characteristic P = f(n) with 5 points along the characteristic is required.

This parameter specifies the power (P) of point 1 as a [%].

The characteristic comprises the following value pairs:

Power (P) / speed (n)

p3320 / p3321 --> point 1 (P1 / n1)

p3322 / p3323 --> point 2 (P2 / n2)

p3324 / p3325 --> point 3 (P3 / n3)

p3326 / p3327 --> point 4 (P4 / n4)

p3328 / p3329 --> point 5 (P5 / n5)

Dependency: Refer to: r0041, p3321, p3322, p3323, p3324, p3325, p3326, p3327, p3328, p3329

Note: The reference value for power and speed is the rated power/rated speed.

The energy saved is displayed in r0041.

P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the status word of the infeed.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
07	DC link undervoltage alarm threshold undershot	Yes	No	-

r3405.1...8 CO/BO: Status word DC link control / ZSW Vdc_ctrl

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the status word of the DC link voltage control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Vdc-ctrl active	Yes	No	-
08	Vdc controller selected	Yes	No	-

Note: Re bit 01:

DC-link voltage control is disabled and enabled with p3513.

Re bit 08 = 1:

DC-link voltage control is selected using p3513.

p3422 DC link capacitance total / C_DC tot

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.20 [mF]	2000.00 [mF]	2.00 [mF]

Description: Sets the total DC link capacitance for closed-loop voltage control.

The capacitance of one power unit is pre-assigned to this value. The value should be adapted according to the number of power units.

Note: The controller setting for the DC-link voltage controller is derived from this value.

p3490 Infeed delay time OFF1 command / INF t_del OFF1

B_INF

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8732, 8832, 8932
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [ms]	1000000.0 [ms]	0.0 [ms]

Description: Sets the delay time for the ON/OFF1 command of the infeed.

After ON/OFF1 = 0 the infeed remains in operation for the specified time

Dependency: Refer to: p0840

Notice: The ON/OFF1 command of the infeed can be interrupted.

Note: This parameter is only relevant if a Motor Module and the infeed are controlled by the same OFF command. In this case, the delay time and the stop ramp time of the motor can be coordinated with one another.

p3510 DC link voltage setpoint / Vdc setp

Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Display and connector output for the unlimited setpoint of the active current controller of the DC link voltage control on the motor side.

p3519[0...3] — CI: DC link pre-control power (scaled) / Vdc prectrl P scal

VECTOR_G
(Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** r2004	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for power pre-control.

Dependency: Refer to: p3521

Note: Closed-loop control of the DC link voltage is improved by pre-controlling the power required for the other components.

A scaled quantity is expected so that the various power reference values (r2004) of the drive objects must be taken into account. The scaling factors are used to adapt the scaling (p3521).

p3520[0...3] — CI: DC link pre-control power (not scaled) / Vdc pre-ctrl P

VECTOR_G
(Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7960
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for power pre-control.

Dependency: Refer to: p3521

Note: Closed-loop control of the DC link voltage is improved by pre-controlling the power required for the other modules.

A non-scaled quantity is expected so that the various power reference values (r2004) of the drive objects do not have to be taken into account. The scaling factors are used to adapt the scaling (p3521).

p3521[0...3] **DC link pre-control power scaling / Vdc prectrl P scal**

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7960
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-100000.00000 [%]	100000.00000 [%]	100.00000 [%]

Description: Sets the scaling factor for the power pre-control.

Dependency: Refer to: p3520

Note: The scaling factor acts on the sum of the associated indices of p3519 and p3520. As one BICO input is scaled (p3519) and the other is not scaled (p3520), for each index, only one of the two inputs should be assigned.

r3522[0...4] **CO: DC link voltage control pre-control display / DC_ctr prectr disp**

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01 [%]	1000.00 [%]	100.00 [%]

Description: Sets the scaled proportional gain for the DC link voltage controller (Vdc controller).

Note: A value of 100% corresponds to the basic setting derived from the loop control parameter (p3422).

p3562 Vdc controller integral time / Vdc_ctrl Tn

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7960
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.10 [%]	100000.00 [%]	100.00 [%]

Description: Sets the scaled integral time for the DC link voltage controller (Vdc).

Note: A value of 100% corresponds to the basic setting derived from the loop control parameter (p3422).

p3660[0...n] VSM input line supply voltage voltage scaler / VSM inp U_scaler

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9880
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	100000.00 [%]	0.00 [%]

Description: Sets the voltage scaler for the Voltage Sensing Module (VSM).

Note: When the 690 V input is used (X522) without voltage scaler, 0 % should be entered.

When the 100 V input (X521) is used with voltage scaler to measure medium voltages, the dividing (scaling) factor multiplied by 100% should be entered.

Example:

1000 V line supply voltage, voltage scaling, 10:1

--> voltage at the VSM input is 100 V

--> p3660 = 10 * 100 % = 1000 %

r3662[0...n] CO: VSM input line supply voltage u2 - u3 / VSM inp u2-u3

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** 5_3	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the input voltage between phases L2 and L3 for the Voltage Sensing Module (VSM).

Dependency: Refer to: p3660

Note: X521.1 or X522.1: Connection of L1

X521.2 or X522.2: Connection of L2

X521.3 or X522.3: Connection of L3

r3664[0...n] CO: VSM temperature evaluation status / VSM temp status

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** p0150	**Func. diagram:** 9886
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of the temperature evaluation of the Voltage Sensing Module (VSM).

This displays whether the temperature actual value has exceeded the fault/alarm threshold.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Alarm is present	Yes	No	-
01	Fault is present	Yes	No	-

Dependency: Refer to: p3665, r3666, p3667, p3668

p3665[0...n] VSM temperature evaluation sensor type / VSM TempSensorType

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** p0150	**Func. diagram:** 9886
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Setting of the temperature sensor for the Voltage Sensing Module (VSM).

The temperature sensor is connected to terminals X520.5 and X520.6 of the VSM.

Value:
0: No sensor
1: PTC
2: KTY84

Note: The pre-assignment of the parameter depends on the device type.

For chassis power units, the temperature monitoring of the line filter is active (p3665 = 2).

r3666[0...n] CO: VSM temperature KTY / VSM temp KTY

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9886
P-Group: Closed-loop control	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the temperature actual value of a KTY84 temperature sensor connected to the Voltage Sensing Module (VSM).

Prerequisite:

A KTY84 sensor is connected and p3665 is set to 2.

Dependency: Refer to: p3665

Note: For sensor type PTC (p3665 = 1), the following applies:
- below the nominal response temperature, r3666 = -50°C.
- above the nominal response temperature, r3666 = 199.9 °C.

p3667[0...n] VSM line filter overtemperature alarm threshold / VSMfilt_T A_thresh

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9886
P-Group: -	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
-100.00 [°C]	301.00 [°C]	150.00 [°C]

Description: Sets the alarm threshold for the KTY temperature sensor of the Voltage Sensing Module (VSM) to monitor the line filter temperature.

Prerequisite:

A KTY84 sensor is connected and p3665 is set to 2.

Dependency: Refer to: p3665

p3668[0...n] VSM line filter overtemperature shutdown threshold / VSM filt_T F_thres

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9886
P-Group: -	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
-100.00 [°C]	301.00 [°C]	180.00 [°C]

Description: Sets the shutdown threshold for the KTY temperature sensor of the VSM to monitor the line filter temperature.

Dependency: Refer to: p3667

p3669[0...n] VSM line filter overtemperature hysteresis / VSM filt_T hyst

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9886
P-Group: -	**Units group:** 21_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [K]	50.00 [K]	3.00 [K]

Description: Sets the hysteresis for the alarm threshold of the VSM to monitor the line filter temperature.

Dependency: Refer to: p3667

p3670[0...n] VSM 10 V input CT gain / VSM CT_gain

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9880
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [A]	1000.000 [A]	1.000 [A]

Description: Sets CT gain of the CT connected at the 10 V input of the Voltage Sensing Module (VSM).

The parameter specifies the current magnitude in [A] referred to the input voltage at the VSM in [V].

Example:

CT with 1 V per 200 A.

--> p3670 = 200

Dependency: Refer to: r3671, r3672

Note: The CT for phase 1 is connected at terminals X520.1 and X520.2 of the VSM.

The CT for phase 2 is connected at terminals X520.3 and X520.4 of the VSM.

r3671[0...n]	CO: VSM 10 V input CT 1 actual value / VSM CT 1 I_act		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9880
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: Displays the current actual value from current transducer (CT) 1 at the 10 V input of the Voltage Sensing Module (VSM).

Dependency: Refer to: p3670

Note: The CT for phase 1 is connected at terminals X520.1 and X520.2 of the VSM.

r3672[0...n]	CO: VSM 10 V input CT 2 actual value / VSM CT 2 I_act		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9880
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: Displays the current actual value from current transducer (CT) 2 at the 10 V input of the Voltage Sensing Module (VSM).

Dependency: Refer to: p3670

Note: The CT for phase 2 is connected at terminals X520.3 and X520.4 of the VSM.

r3673[0...n]	CO: VSM 10 V input 1 actual value / VSM inp 1 U_act		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9880
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Displays the actual value of the voltage measured at the 10 V input 1 of the Voltage Sensing Modules (VSM).

Dependency: Refer to: p3670

Note: 10 V input 1: Terminals X520.1 and X520.2

r3674[0...n]	CO: VSM 10 V input 2 actual value / VSM inp 2 U_act		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9880
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [V]	- [V]	- [V]

Description: Displays the actual value of the voltage measured at the 10 V input 2 of the Voltage Sensing Modules (VSM).

Dependency: Refer to: p3670

Note: 10 V input 2: Terminals X520.3 and X520.4

p3680 BI: Braking Module internal inhibit / BM int inhib

B_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to inhibit the internal Braking Module.

BI: p3680 = 1 signal:

The Braking Module is inhibited.

BI: p3680 = 0 signal:

The Braking Module is enabled.

Caution: When the Braking Module is inhibited, no energy can be dissipated in the braking resistor.

p3681 BI: Activating Braking Module internal DC link fast discharge / BM intDCdischg act

B_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate the DC link fast discharge for an internal braking module.

When the following conditions apply, the DC link fast discharge is started later with delay time (p3682):

- BI: p3681 = 1 signal.
- an external line contactor is opened via r0863.1 "energize contactor".

The DC link fast discharge is interrupted when the following conditions apply:

- BI: p3681 = 0 signal.
- ON command for the infeed.

Recommend.: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults could occur when pre-charging (e.g. F30027).

Dependency: Refer to: p3682

Notice: The parameter is only effective for Basic Line Modules with the internal Braking Module (this is valid for Basic Line Modules with a power rating of less than 100 kW).

p3682 Braking Module internal DC link fast discharge delay time / BM int DC dischg t

B_INF

Can be changed: C1(3), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
500 [ms]	4294967295 [ms]	1000 [ms]

Description: Sets the delay time for switching in the DC link fast discharge for an internal Braking Module.

Dependency: Refer to: p3681

Notice: The parameter is only effective for Basic Line Modules with the internal Braking Module (this is valid for Basic Line Modules with a power rating of less than 100 kW).

p3683	Braking Module internal activation threshold brake chopper / BM int act thresh		
B_INF	**Can be changed:** C2(1)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	110.00 [V]	780.00 [V]	760.00 [V]

Description: Sets the activation threshold for the braking chopper.

Note: The activation threshold is only effective if the "Device supply voltage reduced" function (p0212.0 = 1) has been activated!

r3685	BO: Digital Braking Module: Pre-alarm I2t shutdown / Dig BM A I2t shutd		
B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: The binector output uses a 1 signal to indicate that 80 % of the highest permissible I2t value has been reached in the Braking Module.

r3686	BO: Digital Braking Module Fault / Dig BM Fault		
B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: The binector output uses a 1 signal to indicate an overcurrent fault or an I2t shutdown in the Braking Module.

r3687	BO: Digital Braking Module pre-alarm overtemperature / Dig BM A overtemp		
B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays a fault due to the excessively high temperature.
1 signal:
The connected temperature sensor (X21.1, X21.2) signals an overtemperature.

Recommend.: Measure the braking resistor temperature using the temperature sensor.

r3688	BO: Braking Module internal overtemperature shutdown / BM int temp shutd		
B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the shutdown due to the excessively high temperature.

1 signal:

The connected temperature sensor (X21.1, X21.2) signals an overtemperature. The highest permissible temperature at the connected temperature sensor has been exceeded and results in a shutdown.

r3689 BO: Digital Braking Module Uce fault / Dig BM Uce fault

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays an Uce fault in the internal Braking Module.

1 signal:

An Uce fault is present in the internal Braking Module.

p3800[0...n] Sync-line-drive activation / Sync act

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 7020
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the activation for the line-drive synchronization.

Value:
0: Sync-line-drive de-activated
1: Sync-line-drive activated VSM-INT

Dependency: Refer to: p3801, p3802

Caution: If there is only one VSM being used, this can either be used for line synchronization or for a flying restart. If the VSM was connected to the line supply, then flying restart should be deselected in p1200. If the VSM was connected at the output (motor side), then line synchronization should be deactivated using p3800.

Line synchronization (first VSM connected with the line supply) and also flying restart (second VSM connected to the motor terminals) can only be used if two VSMs are assigned to the Motor Module.

Note: When the ground fault monitoring initiates a fault for overlapping synchronizing the threshold value p0287[1] for the Motor Module and the associated infeed must be appropriately increased (e.g. p0287[1] = 100 %).

For p3800 = 1, the following applies:

The INTERNAL voltage actual values are used for synchronization. The effects that a (sine-wave) filter - that is connected between the Motor Module and motor - has on the voltage actual values are taken into account (theoretically) by appropriately selecting p0230.

VSM: Voltage Sensing Module

p3801[0...n] Sync-line-drive drive object number / Sync DO_no

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** 7020
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	62	1

Description: Sets the drive object number of the VSM used for the line-drive synchronization.

Dependency: Refer to: p3800, p3802

Notice: The current controller sampling time p0115[0] of the drive object with the VSM used for synchronization must be identical to the current controller sampling time of the drive of the drive used to perform line synchronization.

Note: VSM: Voltage Sensing Module

The setting p3801 = 1 is always possible (no VSM selected).

If the VSM is assigned subsequently to a Motor Module, its drive object number must be entered in p3801.

The line voltage is always measured using the first VSM (p0151[0]).

p3802[0...n]	BI: Sync-line-drive enable / Sync enable		
VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 7020
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source to switch in/switch out for the line-drive synchronization.
BI: p3802 = 1 signal:
The line-drive synchronization is switched in.

Dependency: Refer to: p3800, p3801

r3803.0	CO/BO: Sync-line-drive control word / Sync STW		
VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [Hz]	1.00 [Hz]	0.20 [Hz]

Description: Sets the frequency limiting of the phase controller output for the line-drive synchronization.

r3812 CO: Sync-line-drive correction frequency / Sync f_corr

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3080, 7020
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Hz]	- [Hz]	- [Hz]

Description: Displays the correction frequency for the line-drive synchronization.

p3813[0...n] Sync-line-drive phase synchronism threshold value / Sync Ph_sync thrsh

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7020
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [°]	20.00 [°]	2.00 [°]

Description: Sets the threshold value of the phase synchronism for the line-drive synchronization.

A prerequisite for synchronism is achieved if the phase difference is lower than the threshold value.

Note: Synchronism is reached (r3819.2 = 1), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.

r3814 CO: Sync-line-drive voltage difference / Sync U_diff

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	20.00 [%]	10.00 [%]

Description: Sets the threshold value of the voltage difference for the line-drive synchronization.

A prerequisite for synchronism is reached if the voltage difference is less than the threshold value.

Note: Synchronism is reached (r3819.2 = 1), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.

For voltage manipulated quantity margin (reserve) of the drive converter, the amplitude difference (r3814) between the setpoint and actual value is controlled (corrected) to zero.

r3819.0...7 CO/BO: Sync-line-drive status word / Sync ZSW

Description: Display and BICO output for the status word of the friction characteristic.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Friction characteristic OK	Yes	No	-
01	Friction characteristic record activated	Yes	No	-
02	Friction characteristic record completed	Yes	No	-
03	Friction characteristic record aborted	Yes	No	-
08	Friction characteristic positive direction	Yes	No	-
09	Friction torque model controlled status	Upper	Lower	-

Note: Re bit 09:

For closed-control of an induction motors with encoder, the switchover between the current and observer model is displayed (see also r1751.19), if p3844 is > 0.

The following applies for bit 9 = 0 (observer model active):

The frictional torque is calculated from the characteristic values from the characteristic point entered into p3844.

The following applies for bit 9 = 1 (current model active):

The frictional torque is calculated from the characteristic values below the characteristic point entered into p3844.

p3844[0...n] Friction characteristic number changeover point upper / FricNo chng_pt up

VECTOR_G (n/M)			
	Can be changed: U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
	Not for motor type: PEM, REL, FEM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	4	0

Description: Selects the upper changeover point of the friction characteristic for the frictional torque input controlled by the motor model of the induction motor.

The speed of this changeover point is preassigned when automatically calculating with the changeover speed p1752. The changeover point located below is preassigned with the changeover speed p1752 * (1 - p1753).

Example: p3844 = 3 means that the speed value for the change to the monitor model (p3823 = p1752) is entered into p3823 (friction characteristic value n3).

Depending on the display of r3840.9, the frictional torque is calculated from the friction characteristic values, which are associated with these changeover points. For the changeover of the motor model, with hysteresis, the frictional torque smoothed with p3843 changes between these two states.

Dependency: As part of the automatic calculation (p0340), p3844 is only activated for closed loop control (p1300 = 21, 23) of induction motors with encoder.

Refer to: p3843

Notice: If the changeover point defined using p3844 does not match the changeover speed p1752, then internally, the model-controlled friction torque input is automatically deactivated (same as for p3844 = 0).

Note: For p3844 = 0, the model-controlled frictional torque changeover is deactivated. The frictional torque is then calculated the same as for the encoderless control by interpolating between the points along the friction characteristic.

p3845 Friction characteristic record activation / Frict rec act

VECTOR_G			
	Can be changed: T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 7010
	P-Group: Functions	**Units group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	3	0

Description: Setting for the friction characteristic record.

After the next power-on command, the friction characteristic is automatically recorded.

Value:
- 0: Friction characteristic record de-activated
- 1: Friction char record activated for all directions
- 2: Friction char record activated for positive direction
- 3: Friction char record activated for negative direction

Dependency: When selecting the friction characteristic measurement, the drive data set changeover is suppressed.

For linear drives (refer to r0108 bit 12) it is not permissible to carry out the friction characteristic measurement for mechanical systems that limit travel.

Danger: ⚠ For drives with a mechanical system that limit the distance moved, it must be ensured that during recording, the friction characteristic is not reached. If this is not the case, then it is not permissible that the measurement is carried out.

Notice: To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note: When the friction characteristic record is active, it is not possible to save the parameters (p0971, p0977).

When the friction characteristic record is active (p3845 > 0), it is not possible to change p3820 ... p3829, p3830 ... p3839 and p3842.

When recording the friction characteristic, in addition to the friction, the motor losses are also determined (e.g. iron losses, eddy current losses and re-magnetizing losses). A differentiation is not made between these individual loss components. We recommend that a motor temperature sensor is used because torque deviations can also be emulated/mapped on the characteristic due to the thermal influence.

p3846[0...n] Friction characteristic record ramp-up/ramp-down time / Frict rec t_RU/RD

VECTOR_G (n/M)			
	Can be changed: T	**Calculated:** -	**Access level:** 2

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Signal to energize terminal X21.1 "inhibit/acknowledgement" on the Braking Module.

This binector output is used as signal source to interconnect to a digital output.

For "booksize" formats the digital output must be connected to terminal X21.1 and for "chassis" formats the digital output must be connected to terminal X21.3 of the particular Braking Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Inhibit/acknowledge Braking Module 1	High	Low	-
01	Inhibit/acknowledge Braking Module 2	High	Low	-
02	Inhibit/acknowledge Braking Module 3	High	Low	-
03	Inhibit/acknowledge Braking Module 4	High	Low	-
04	Inhibit/acknowledge Braking Module 5	High	Low	-
05	Inhibit/acknowledge Braking Module 6	High	Low	-
06	Inhibit/acknowledge Braking Module 7	High	Low	-
07	Inhibit/acknowledge Braking Module 8	High	Low	-

Warning: Check that binector outputs BO: r3861.n are connected correctly and that the appropriate digital outputs are wired correctly.

If the interconnection/wiring is incorrect, the software could execute a different (incorrect) function via binector outputs BO: r3861.n if the Braking Module develops a fault.

p3862 Braking Module DC link fast discharge delay time / BM DC-dischg t_del

B_INF (Brk Mod ext)

Can be changed: C1(3), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: Communications	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
500 [ms]	4294967295 [ms]	1000 [ms]

Description: Sets the delay time for switching in the DC link fast discharge.

Dependency: Refer to: p3863, r3864

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3863 BI: Activating Braking Module DC link fast discharge / BM DC-dischg act

B_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate the DC link fast discharge.

The DC link fast discharge is started later with delay time (p3862) when the following conditions apply:

- BI: p3863 = 1 signal.
- an external line contactor is opened via r0863.1 "energize contactor".

The DC link fast discharge is interrupted when the following conditions apply:

- BI: p3863 = 0 signal.
- ON command for the infeed.

Recommend.: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults could occur when pre-charging (e.g. F30027).

Dependency: Refer to: r3864

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

r3864.0...7 BO: Braking Module DC link fast discharge / BM DC link dischg

B_INF (Brk Mod ext)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Signal to control (energize) terminal X21.2 "DC link fast discharge" on the Braking Module.

This binector output is used as signal source to interconnect to a digital output. The digital output must be connected to terminal X21.2 of the particular Braking Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fast discharge Braking Module 1	High	Low	-
01	Fast discharge Braking Module 2	High	Low	-
02	Fast discharge Braking Module 3	High	Low	-
03	Fast discharge Braking Module 4	High	Low	-
04	Fast discharge Braking Module 5	High	Low	-
05	Fast discharge Braking Module 6	High	Low	-

06	Fast discharge Braking Module 7	High	Low	-
07	Fast discharge Braking Module 8	High	Low	-

Dependency: Refer to: p3863

Warning:

It must be carefully ensured that the binector outputs BO: p3864.n are correctly interconnected and also that the appropriate digital outputs are correctly connected up.

If the interconnection/connection is incorrect, in the case of an active DC link fast discharge, the software could execute another function (incorrect function) via binector outputs BO: p3864.n or could also permanently control the DC link fast discharge even if the line contactor is closed.

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3865[0...7] BI: Braking Module pre-warning I*t shutdown / BM I*t shutdown

B_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the message "pre-alarm I*t shutdown" of the Braking Module.

BI: p3865[0...7] = 1 signal --> no pre-alarm, I*t shutdown

BI: p3865[0...7] = 0 signal --> pre-alarm I*t shutdown (A06901)

Note: For the Braking Module, this message is output via the following terminal:

- X21.4 for the "Booksize" format

This function is not supported for the "chassis" format.

p3866[0...7] BI: Braking Module fault / BM fault

B_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the "Fault" message of the Braking Module.

BI: p3866[0...7] = 1 signal --> No fault

BI: p3866[0...7] = 0 signal --> fault (A06900)

For a 0 signal, an acknowledgement via BO: r3861 is automatically carried out at certain time intervals.

Note: For the Braking Module, this message is output via the following terminal:

- X21.4 for the "Booksize" format
- X21.5 for the "Chassis" format

p3880 BI: ESM activation signal source / ESM act s s

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 7033
P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate the essential service mode (ESM) via digital input.

Using this function, when required the motor can be operated for as long as possible (e.g. to extract smoke).

BI: p3880 = 1 signal:

The essential service mode is activated.

BI: p3880 = 0 signal:

The essential service mode is deactivated.

Dependency: Refer to: p3881, p3882, p3883, p3886, r3887, p3888, r3889

Warning: When activating the essential service mode (BI: p3880 = 1 signal), the motor immediately runs according to the selected setpoint source. When the essential service mode is activated, the motor cannot be stopped using the OFF commands.

Note: ESM: Essential Service Mode

Permissible signal sources:

- BO: r0722.x (high active)
- BO: r0723.x (low active), x = 0 ... 17, 20, 21

p3881 ESM setpoint source / ESM setp_src

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3

P-Group: Functions	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	7	0

Description: Sets the setpoint source for essential service mode (ESM).

Value:
0: Last known setpoint (r1078 smoothed)
1: Fixed speed setpoint 15 (p1015)
3: Fieldbus
5: TB30/TM31 analog input
6: Enable the response OFF1
7: Enable the response OFF2

Note: ESM: Essential Service Mode

When the essential service mode is activated, the effective speed setpoint is displayed in r1114.

Re p3881 = 0:

The last known setpoint value is only transmitted safely if it was present consistently for at least 30 s prior to activating the essential service mode. If this condition is not met, fixed speed setpoint 15 (p1015) is used.

Re p3881 = 5:

The signal source for the setpoint via analog input for TB30/TM31 is set via p3886.

Re p3881 = 6:

n_act = 0: pulse cancellation and switching-on inhibited.

n_active > 0: braking along the ramp-function generator down ramp (p1121), pulse cancellation and switching-on inhibited.

Re p3881 = 7:

n_act = 0: pulse cancellation and switching-on inhibited.

n_act > 0: immediate pulse cancellation and switching-on inhibited.

07	Setpoint TB30/TM31 analog input parameterized (p3886)	Yes	No	-
08	Power unit not permissible (permissible p0201 >= 14000)	Yes	No	-
09	Response OFF1/OFF2 activated	Yes	No	-
10	Automatic restart interrupted (F07320)	Yes	No	-

Note: ESM: Essential Service Mode

p3900 Completion of quick commissioning / Compl quick_comm

B_INF

Can be changed: C2(1)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Exits the quick commissioning (p0010 = 1) with automatic calculation of all of the parameters that depend on the entries made during the quick commissioning.

p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning. The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700 are re-established and all of the dependent filter and closed-loop control parameters are calculated (corresponding to p0340 = 1).

p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700 and the calculations corresponding to p0340 = 1.

p3900 = 3 only includes the end of quick commissioning.

Value:
0: No quick parameterization
1: Quick parameterization after parameter reset
2: Quick param. (only) for controller par. and reset for BICO par
3: Completion of quick commissioning

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: When the calculations have been completed, p3900 and p0010 are automatically reset to a value of zero.

p3900 Completion of quick commissioning / Compl quick_comm

VECTOR_G

Can be changed: C2(1)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Exits quick commissioning (p0010 = 1) with automatic calculation of all parameters of all existing drive data sets that depend on the entries made during quick commissioning.

p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning.

The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 are re-established and all of the dependent motor, open-loop and control-loop control parameters are calculated (corresponding to p0340 = 1).

p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 and the calculations corresponding to p0340 = 1.

p3900 = 3 only includes the calculations associated with the motor, open-loop and closed-loop control parameters corresponding to p0340 = 1.

Value:
0: No quick parameterization
1: Quick parameterization after parameter reset
2: Quick parameterization (only) for BICO and motor parameters
3: Quick parameterization for motor parameters (only)

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: When the calculations have been completed, p3900 and p0010 are automatically reset to a value of zero.

When calculating motor, open-loop and closed-loop control parameters (such as for p0340 = 1) parameters associated with a selected Siemens catalog motor are not overwritten.

If a catalog motor has not been selected (p0300), then the following parameters are reset with p3900 > 0 in order to restore the situation that applied when commissioning the drive for the first time:

induction motors p0320, p0352, p0353, p0362 ... p0369, p0391 ... p0393, p0604, p0605, p0626 ... p0628

synchronous motor p0326, p0327, p0352, p0353, p0391 ... p0393, p0604, p0605.

The counter is incremented by one for each modified BICO interconnection.

r3979 BICO counter drive object / BICO counter DO

B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the counter reading for modified BICO interconnections on this drive object.
The counter is incremented by one for each modified BICO interconnection.

p3981 Faults acknowledge drive object / Faults ackn DO

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to acknowledge all active faults of a drive object.

Notice: Safety messages cannot be acknowledged using this parameter.

Note: Parameter should be set from 0 to 1 to acknowledge.
After acknowledgement, the parameter is automatically reset to 0.

p3985 Master control mode selection / PcCtrl mode select

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Setpoints	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the mode to change over the master control / LOCAL mode.

Value:
0: Change master control for STW1.0 = 0
1: Change master control in operation

Danger: When changing the master control in operation, the drive can manifest undesirable behavior - e.g. it can accelerate up to another setpoint.

r3986	**Parameter count / Parameter No.**		
All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3

	0	10800	-

Description: Index 0:
Displays the boot state.
Index 1:
Displays the partial boot state

Value:
0: Not active
1: Fatal fault
10: Fault
20: Reset all parameters
30: Drive object modified
40: Download using commissioning software
50: Parameter download using commissioning software
90: Reset Control Unit and delete drive objects
100: Start initialization
101: Wait for topology input
110: Instantiate Control Unit basis
111: Insert drive object
112: Remove drive object
113: Change drive object number
114: Change component number
115: Parameter download using commissioning software
117: Remove component
150: Wait until actual topology determined
160: Evaluate topology
170: Instantiate Control Unit reset
180: Initialization YDB configuration information
200: First commissioning
210: Create drive packages
250: Wait for topology acknowledge
325: Wait for input of drive type
350: Determine drive type
360: Write into topology-dependent parameters
370: Wait until p0009 = 0 is set
380: Check topology
550: Call conversion functions for parameter
625: Wait non-cyclic starting DRIVE-CLiQ
650: Start cyclic operation
660: Evaluate drive commissioning status
670: Autom. FW update DRIVE-CLiQ components
680: Wait for CU LINK slaves
690: Wait non-cyclic starting DRIVE-CLiQ
700: Save parameters

725: Wait until DRIVE-CLiQ cyclic
740: Check the ability to operate
745: Start of the time slices
750: Interrupt enable
800: Initialization finished
10050: Wait for synchronization
10100: Wait for CU LINK slaves
10150: Wait until actual topology determined

Description: Displays whether the drive still has to be commissioned for the first time.

0 = Yes

2 = No

r4021 TB30 digital inputs terminal actual value / TB30 DI act value

TB30	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9100
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the actual value at the digital inputs.

This means that the actual input signal can be checked at terminal DI x prior to switching from the simulation mode (p4095.x = 1) to the terminal mode (p4095.x = 0).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI 0 (X481.1)	High	Low	-
01	DI 1 (X481.2)	High	Low	-
02	DI 2 (X481.3)	High	Low	-
03	DI 3 (X481.4)	High	Low	-

Note: DI: Digital Input

r4021 TM31 digital inputs terminal actual value / TM31 DI act value

TM31	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9549, 9550, 9552, 9560, 9562
	P-Group: Commands	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the actual value at the digital inputs.

This means that the actual input signal can be checked at terminal DI x or DI/DO x prior to switching from the simulation mode (p4095.x = 1) to terminal mode (p4095.x = 0).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI 0 (X520.1)	High	Low	-
01	DI 1 (X520.2)	High	Low	-
02	DI 2 (X520.3)	High	Low	-
03	DI 3 (X520.4)	High	Low	-
04	DI 4 (X530.1)	High	Low	-
05	DI 5 (X530.2)	High	Low	-
06	DI 6 (X530.3)	High	Low	-
07	DI 7 (X530.4)	High	Low	-
08	DI/DO 8 (X541.2)	High	Low	-
09	DI/DO 9 (X541.3)	High	Low	-
10	DI/DO 10 (X541.4)	High	Low	-
11	DI/DO 11 (X541.5)	High	Low	-

Note: If a DI/DO is parameterized as output (p4028.x = 1), then r4021.x = 0 is displayed.

DI: Digital Input

DI/DO: Bidirectional Digital Input/Output

r4022.0...3 CO/BO: TB30 digital inputs status / TB30 DI status

TB30

Can be changed: -	**Calculated:** -	**Access level:** 1

P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the digital output DO 0 (X542.1, X542.2, X542.3) of Terminal Module 31 (TM31).

Digital output 0 of TM31 is a relay output.

If the signal at the binector input p4030 is low, then terminal COM 0 (X542.2) is connected to NC 0 (X542.1). This connection also matches the mechanical quiescent setting of the relay.

If the signal at the binector input p4030 is high, then terminal COM 0 (X542.2) is connected to NO 0 (X542.3).

Note: DO: Digital Output

NC: Normally Closed contact

NO: Normally Open contact

DI/DO: Bidirectional Digital Input/Output

p4046 TM31 digital outputs limit current / TM31 DO limit curr

TM31

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9560
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the limit for the total output voltage of terminals X541.1, X541.2, X541.3 and X541.4 (DI/DO 8 ... 11) of Terminal Module 31 (TM31).

Value:
0: 0.1 A total current limit DI/DO 8 ... 11
1: 1.0 A total current limit DI/DO 8 ... 11

Dependency: Refer to: p4028

Warning: Since the sum of the output currents at terminals X541.1, X541.2, X541.3 and X541.4 is limited, an overcurrent or short circuit at one output terminal can cause a dip in the signal at the other terminals.

r4047 TB30 digital outputs status / TB30 DO status

TB30

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9102
P-Group: Commands	**Units group:** -	**Unit selection:** -

P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	5	4

Description: Sets the type of analog inputs of Terminal Module 31 (TM31).

p4056[x] = 0, 4 correspond to a voltage input (r4052, p4057, p4059 are displayed in V).

p4056[x] = 2, 3, 5 correspond to a current input (r4052, p4057, p4059 are displayed in mA).

In addition, the associated switch S5 must be appropriately set.

AI 0: S5.0 = V --> voltage input, S5.0 = I --> current input (burden resistor = 250 Ohm)

AI 1: S5.1 = V --> voltage input, S5.1 = I --> current input (burden resistor = 250 Ohm)

Value:
0: Unipolar voltage input (0 V ... +10 V)
2: Unipolar current input (0 mA ... +20 mA)
3: Unipolar current input monitored (+4 mA to +20 mA)
4: Bipolar voltage input (-10 V ... +10 V)
5: Bipolar current input (-20 mA to +20 mA)

Index:
[0] = AI 0 (X521.1/X521.2, S5.0)
[1] = AI 1 (X521.3/X521.4, S5.1)

Warning: The maximum voltage difference between the analog input terminals AI+, AI- and the ground of the TM31 (X520.6, X530.3) may not exceed 35 V.

For operation with the load resistor switched in, the voltage between the differential inputs AI+ and AI- may not exceed 15 V or the impressed current of 60 mA; if this is not carefully observed, the input will be damaged.

Notice: For operation as a voltage input/current input, switch S5.0 or S5.1 must be appropriately set.

Note: When changing p4056, the parameters of the scaling characteristic (p4057, p4058, p4059, p4060) are overwritten with the following default values:

For p4056 = 0, 4, p4057 is set to 0.0 V, p4058 to 0.0 %, p4059 to 10.0 V and p4060 to 100.0 %.

For p4056 = 2, 5, p4057 is set to 0.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.

For p4056 = 3, p4057 is set to 4.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.

	4	4	-

Description: Displays the type of analog outputs of the Terminal Board 30 (TB30).

Value: 4: Voltage output (-10 V ... +10 V)

Index: [0] = AO 0 (X482.5/X482.6)
[1] = AO 1 (X482.7/X482.8)

p4076[0...1] TM31 analog outputs type / TM31 AO type

TM31	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9572
	P-Group: Terminals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	4	4

Description: Sets the type of analog outputs of Terminal Module 31 (TM31).

p4076[x] = 1, 4 correspond to a voltage output (p4074, p4078, p4080, p4083 are displayed in V).

p4076[x] = 0, 2, 3 correspond to a current output (p4074, p4078, p4080, p4083 are displayed in mA).

Value:
0: Current output (0 mA ... +20 mA)
1: Voltage output (0 V ... +10 V)
2: Current output (+4 mA ... +20 mA)
3: Current output (-20 mA ... +20 mA)
4: Voltage output (-10 V ... +10 V)

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: Refer to: p4077, p4078, p4079, p4080

Note: When changing p4076, the parameters of the scaling characteristic (p4077, p4078, p4079, p4080) are overwritten with the following default values:

For p4076 = 0, 3, p4077 is set to 0.0 %, p4078 to 0.0 mA, p4079 to 100.0 % and p4080 to 20.0 mA.

For p4076 = 1, 4, p4077 is set to 0.0 %, p4078 to 0.0 V, p4079 to 100.0 % and p4080 to 10.0 V.

For p4076 = 2, p4077 is set to 0.0 %, p4078 to 4.0 mA, p4079 to 100.0 % and p4080 to 20.0 mA.

p4077[0...1] TB30 analog outputs characteristic value x1 / TB30 AO char x1

TB30	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9106

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-1000.00 [%]	1000.00 [%]	0.00 [%]

Description: Sets the scaling characteristic for the analog outputs of Terminal Board 30 (TB30).

The scaling characteristic for the analog outputs is defined using 2 points.

This parameter specifies the x coordinate (percentage) of the 1st value pair of the characteristic.

Index: [0] = AO 0 (X482.5/X482.6)
[1] = AO 1 (X482.7/X482.8)

Note: The parameters for the characteristic do not have a limiting effect.

p4077[0...1] TM31 analog outputs characteristic value x1 / TM31 AO char x1

TM31	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9572
	P-Group: Terminals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-1000.00 [%]	1000.00 [%]	0.00 [%]

Description: Sets the scaling characteristic for the analog outputs of Terminal Module 31 (TM31).
The scaling characteristic for the analog outputs is defined using 2 points.
This parameter specifies the x coordinate (percentage) of the 1st value pair of the characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: Refer to: r4076, p4076

Notice: This parameter is automatically overwritten when changing p4076 (type of analog outputs).

Note: The parameters for the characteristic do not have a limiting effect.

p4078[0...1] TB30 analog outputs characteristic value y1 / TB30 AO char y1

TB30	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9106
	P-Group: Terminals	**Units group:** -	**Unit selection:** -

	Min	**Max**	**Factory setting**
	-20.000 [V]	20.000 [V]	0.000 [V]

Description: Sets the scaling characteristic for the analog outputs of Terminal Module 31 (TM31).
The scaling characteristic for the analog outputs is defined using 2 points.
This parameter specifies the y coordinate (output voltage in V or output current in mA) of the 1st value pair of the characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: The unit of this parameter (V or mA) depends on the analog output type.
Refer to: r4076, p4076

Notice: This parameter is automatically overwritten when changing p4076 (type of analog outputs).

Note: The parameters for the characteristic do not have a limiting effect.

p4079[0...1] TB30 analog outputs characteristic value x2 / TB30 AO char x2

TB30

Min	**Max**	**Factory setting**
-20.000	20.000	0.000

Description: Sets the offset for the analog outputs of Terminal Module 31 (TM31).
The offset is added to the output signal after the scaling characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: The unit of this parameter (V or mA) depends on the analog input type.

Refer to: r4076, p4076

Note: This means, for example, the offset of a downstream isolating amplifier can be compensated.

p4095 TB30 digital inputs simulation mode / TB30 DI sim_mode

TB30

Can be changed: U, T	**Calculated:** -	**Access level:** 2

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-11.000 [V]	11.000 [V]	0.000 [V]

Description: Sets the setpoint for the input voltage in the simulation mode of the analog inputs of Terminal Board 30 (TB30).

Index: [0] = AI 0 (X482.1/X482.2)
[1] = AI 1 (X482.3/X482.4)

Dependency: The simulation of an analog input is selected using p4097.
Refer to: p4097

Note: This parameter is not saved when data is backed-up (p0971, p0977).
AI: Analog Input

p4098[0...1] TM31 analog inputs simulation mode setpoint / TM31 AI sim setp

TM31

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9566, 9568
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-20.000	20.000	0.000

Description: Sets the setpoint for the input value in simulation mode of the analog inputs of Terminal Module 31 (TM31).

Index: [0] = AI 0 (X521.1/X521.2, S5.0)
[1] = AI 1 (X521.3/X521.4, S5.1)

Dependency: The simulation of an analog input is selected using p4097.

If AI x is parameterized as voltage input (p4056), then the setpoint is a voltage in V.

If AI x is parameterized as current input (p4056), then the setpoint is a current in mA.

Refer to: r4056, p4056, p4097

Note: This parameter is not saved when data is backed-up (p0971, p0977).

AI: Analog Input

p4099[0...2] TB30 inputs/outputs sampling time / TB30 I/O t_sample

TB30

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9099, 9100
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [µs]	5000.00 [µs]	[0] 4000.00 [µs] [1] 4000.00 [µs] [2] 4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Board 30 (TB30).

Index:
[0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.

The sampling times can only be set as an integer multiple of the basic sampling time (r0110, r0111).

Refer to: p0009, r0110, r0111

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).

For clock cycle synchronous PROFIBUS operation, the TB30 hardware (e.g. A/D converter) is operated with the PROFIBUS clock cycle (r2064[1]). This clock cycle is also kept after the PROFIBUS connection has been exited up to the next time that the Control Unit is powered down. In this case, a faster sampling time than the PROFIBUS clock cycle is not practical in p4099[0...2].

p4099[0...2] TM31 inputs/outputs sampling time / TM31 I/O t_sample

TM31

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9549, 9550
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Module 31 (TM31).

Index:
[0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.

The following applies for the sampling time:

The sampling times at a DRIVE-CLiQ line must be integral multiples of one another.

The sampling times of this TM must be an integral multiple of a servo or vector drive that exists in the system.

The minimum permissible sampling time is 125 µs.

The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).

Refer to: p0009, r0110, r0111

Notice: The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).

Parameter p4099[0] must never be equal to zero.

p4100[0...11] TM150 sensor type / TM150 sensor type

TM150			
	Can be changed: T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9626, 9627
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	6	5

Description: Sets the sensor type for Terminal Module 150 (TM150)

This means that the temperature sensor type is selected and the evaluation is switched in.

Value:
0: Evaluation disabled
1: PTC thermistor
2: KTY84
4: Bimetallic NC contact
5: PT100
6: PT1000

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5
[6] = Temperature channel 6
[7] = Temperature channel 7
[8] = Temperature channel 8
[9] = Temperature channel 9
[10] = Temperature channel 10
[11] = Temperature channel 11

Notice: For p4102[0...23] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:

To activate the corresponding alarm or fault, p4102[0...23] must be set <= 250 °C.

Note: The temperature sensors are connected to the following terminals:

X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6)

X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7)

X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8)

X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)

X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)

X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)

Details on the wiring are included in the parameter description for p4108.

p4100 TM31 sensor type / TM31 sensor type

TM31			
	Can be changed: T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9576
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	2	0

Description: Sets the sensor type for Terminal Module 31 (TM31)

This means that the temperature sensor type is selected and the evaluation is switched in.

Value:
0: Evaluation disabled
1: PTC thermistor
2: KTY84

Notice: For p4102[0...1] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100 = 1), the following applies:

To activate the corresponding alarm or fault, p4102[0...1] must be set <= 250 °C.

Note: The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

r4101[0...11] TM150 sensor resistance / TM150 R_sensor

TM150

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9626, 9627
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual resistance value of the temperature sensor connected at the Terminal Module.

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5
[6] = Temperature channel 6
[7] = Temperature channel 7
[8] = Temperature channel 8
[9] = Temperature channel 9
[10] = Temperature channel 10
[11] = Temperature channel 11

Note: The maximum measurable resistance value is approx. 2500 Ohm.

For 1x2 and 2x2 wire evaluation:

The actual sensor resistance is displayed in this parameter(i.e. the wire resistance (p4110) is taken into account).

The temperature sensors are connected to the following terminals:

X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6)

X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7)

X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8)

X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)

X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)

X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)

Details on the wiring are included in the parameter description for p4108.

r4101 TM31 sensor resistance / TM31 R_sensor

TM31

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 9576
P-Group: Terminals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual resistance value of the temperature sensor connected at the Terminal Module.

Note: The maximum measurable resistance value is approx. 2170 Ohm.

The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

p4102[0...23] TM150 fault threshold/alarm threshold / TM150 F/A_thresh

TM150

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9626, 9627
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-99 [°C]	251 [°C]	251 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 150 (TM150).

For alarms (even indices [0, 2, 4 ... 22]), the following applies:

- The corresponding alarm is initiated, if the temperature actual value associated with a temperature channel exceeds the associated alarm threshold (r4105[x] > p4102[2x]. In addition, the timer is started (p4103[x]).

- The alarm remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x] - hysteresis (p4118[x]).

For faults (uneven indices [1, 3, 5 ... 23]), the following applies:

- The corresponding fault is initiated, if the temperature actual value associated with a temperature channel exceeds the associated fault threshold (r4105[x] > p4102[2x+1] or the associated timer (p4103[x] has expired.

- The fault remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x+1]) - hysteresis (p4118[x]) and the fault has been acknowledged.

Index:
[0] = Channel 0 alarm threshold (A35211)
[1] = Channel 0 fault threshold (F35207)
[2] = Channel 1 alarm threshold (A35212)
[3] = Channel 1 fault threshold (F35208)
[4] = Channel 2 alarm threshold (A35213)
[5] = Channel 2 fault threshold (F35209)
[6] = Channel 3 alarm threshold (A35214)
[7] = Channel 3 fault threshold (F35210)
[8] = Channel 4 alarm threshold (A35410)
[9] = Channel 4 fault threshold (F35400)
[10] = Channel 5 alarm threshold (A35411)
[11] = Channel 5 fault threshold (F35401)
[12] = Channel 6 alarm threshold (A35412)
[13] = Channel 6 fault threshold (F35402)
[14] = Channel 7 alarm threshold (A35413)
[15] = Channel 7 fault threshold (F35403)
[16] = Channel 8 alarm threshold (A35414)
[17] = Channel 8 fault threshold (F35404)
[18] = Channel 9 alarm threshold (A35415)
[19] = Channel 9 fault threshold (F35405)
[20] = Channel 10 alarm threshold (A35416)
[21] = Channel 10 fault threshold (F35406)
[22] = Channel 11 alarm threshold (A35417)
[23] = Channel 11 fault threshold (F35407)

Dependency: Refer to: p4103, r4104, r4105, p4118

Notice: Faults F35207 ... F35210 and F35400 ... F35407 only result in the drive being shut down if at least one BICO interconnection exists between the drive and the TM150.

For p4102[0...23] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100[0...11] = 1), the following applies:

To activate the corresponding alarm or fault, p4102[0...23] must be set <= 250 °C.

Note: The hysteresis can be set in p4118[0...11].

p4102[0...1] TM31 fault threshold/alarm threshold / TM31 F/A_thresh

TM31

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9576
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-48 [°C]	251 [°C]	[0] 100 [°C] [1] 120 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 31 (TM31).

A35211 is initiated, if the temperature actual value r4105[0] > p4102[0]

F35207 is initiated if the temperature actual value r4105[0] > p4102[1] or timer p4103[0] has expired

For alarm A35211 the following applies:

- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[0] - hysteresis).

For fault F35207 the following applies:

- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[1] - hysteresis) and the fault has been acknowledged.

- The hysteresis value is 5 K and cannot be changed by the user.

Index:
[0] = Alarm threshold
[1] = Fault threshold

Dependency: Refer to: r4104

Notice: Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

For p4102[0...1] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100 = 1), the following applies:

To activate the alarm or fault, p4102[0...1] must be set <= 250 °C.

p4103[0...11] TM150 delay time / TM150 t_delay

TM150

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9626, 9627
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	600.0 [s]	0.0 [s]

Description: Sets the delay time for the output of the fault for the Terminal Module 150 (TM150).

The timer is started when the alarm threshold (e.g. p4102[0]) is exceeded.

If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then the corresponding fault is output.

The fault can be acknowledged, if, after the delay time has expired, the alarm threshold is again fallen below.

For sensor type "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6) the following applies:

- If the fault threshold (e.g. p4102[1]) is exceeded before the delay time has expired, then the corresponding fault is immediately output.

For sensor type "PTC thermistor", "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:

- Alarm and fault threshold simultaneously respond. The fault is only issued after the delay time has expired.

[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5
[6] = Temperature channel 6
[7] = Temperature channel 7
[8] = Temperature channel 8
[9] = Temperature channel 9
[10] = Temperature channel 10
[11] = Temperature channel 11

Dependency: Refer to: p4102, r4104, r4105, p4118

Warning: The fault F35207 ... F35210 and F35400 ... 35407 only results in the drive being shut down if at least one BICO interconnection exists between the drive and the TM150.

Note: For p4103 = 0 s and sensor type "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6) the following applies:

- The corresponding fault can only be initiated via the fault threshold (output of the timer is always a logical 0).

For p4103 = 0 s and sensor type "PTC thermistor", "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:

- The corresponding alarm and fault are simultaneously output (delay time = 0 s).

p4103 TM31 temperature evaluation delay time / TM31 temp t_delay

TM31

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9576
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [ms]	600000.000 [ms]	0.000 [ms]

Description: Sets the delay time for the output of the fault for the Terminal Module 31 (TM31).

The timer is started when the alarm threshold (p4102[0]) is exceeded.

If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F35207 is output.

The fault can be acknowledged, if, after the delay time has expired, the alarm threshold is again fallen below.

For sensor type "KTY84" (p4100 = 2), the following applies:

If the fault threshold (p4102[1]) is exceeded before the delay time has expired, then fault F35207 is immediately output.

For sensor type "PTC thermistor" (p4100 = 1), the following applies:

- Alarm and fault threshold simultaneously respond. The fault is only issued after the delay time has expired.

Dependency: Refer to: r4104

Warning: Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

Note: With p4103 = 0 ms, the timer is de-activated and only the fault threshold is effective.

Min	**Max**	**Factory setting**
0	1	0

Description: Setting to start the measurement of the wire resistance for a channel for the Terminal Module 150 (TM150).

For a 2 wire evaluation, the total wire resistance is measured and saved. During the temperature evaluation, the temperature actual value is automatically calibrated using the measured wire resistance.

Procedure:

1. Select the measuring method (1x2/2x2) for the corresponding terminal block (p4108[0...5] = 0, 1).
2. Set the required sensor type for the corresponding channel (p4100[x] = 1 ... 6, x = 0...5 or 0...11).
3. Jumper the sensor to be connected (short-circuit the sensor conductor close to the sensor).
4. Connect the sensor conductors to the appropriate terminals 1(+), 2(-) or 3(+), 4(-).
5. For the corresponding channel, start the measurement of the wire resistance (p4109[x] = 1).
6. After p4109[x] = 0, check the measured resistance value in p4110[x].
7. Remove the jumper across the temperature sensor.

Value: 0: Inactive
1: Start

	-	-	0000 0000 0000 0000 bin

Description: Assigns the temperature channels to groups for the Terminal Module 150 (TM150)

For each group, the following calculated values are provided from the temperature actual values (r4105[0...11]):

- Maximum value (r4112[0...2])

- Minimum value (r4113[0...2])

- average value (r4114[0...2])

Index: [0] = Group 0
[1] = Group 1
[2] = Group 2

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Temperature channel 0	Yes	No	-
01	Temperature channel 1	Yes	No	-
02	Temperature channel 2	Yes	No	-
03	Temperature channel 3	Yes	No	-
04	Temperature channel 4	Yes	No	-
05	Temperature channel 5	Yes	No	-
06	Temperature channel 6	Yes	No	-
07	Temperature channel 7	Yes	No	-
08	Temperature channel 8	Yes	No	-
09	Temperature channel 9	Yes	No	-
10	Temperature channel 10	Yes	No	-
11	Temperature channel 11	Yes	No	-

Dependency: Refer to: r4105, r4112, r4113, r4114

Notice: When forming groups, it must be ensured that in one particular group, only temperature channels with the following sensor types are included:

- "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6), real temperature actual value

or alternatively

- "PTC thermistor", "bimetallic NC contact" (p4100[0...11] = 1, 4), fictitious temperature actual value (-50 °C, 250 °C)

If these sensor types are combined within one group, then the calculated values for maximum, minimum and average value will be falsified.

Note: Active and inactive temperature channels can be included in one group. However, when calculating the values (r4112, r4113, r4114) only the active temperature channels with valid actual value are taken into account (r4105[0...11] not equal to -300 °C).

P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the rated line frequency for the filter to skip the line frequency for Terminal Module 150 (TM150).

Value:
0: 50 Hz
1: 60 Hz

p4600[0...n] Motor temperature sensor 1 sensor type / Temp_sens 1 type

VECTOR_G

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** 8016
P-Group: Motor	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	32	0

Description: Sets the sensor type of the first temperature sensor for the motor temperature monitoring.

Value:
0: No sensor
10: PTC fault
11: PTC alarm
12: PTC alarm & timer
20: KTY84
30: Bimetallic NC contact fault
31: Bimetallic NC contact alarm
32: Bimetallic NC contact alarm & timer

Dependency: Refer to: r0458, p0600, p0601

Note: This parameter is effective only when p0601 = 10.

PTC thermistor: Tripping resistance = 1650 Ohm

Information on using temperature sensors is provided in the following literature:

- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

p4601[0...n]	Motor temperature sensor 2 sensor type / Temp_sens 2 type		
VECTOR_G	**Can be changed:** C2(3), U, T	**Calculated:** -	**Access level:** 2

r4620[0...3] Motor temperature measured / Mot_temp meas

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the actual temperature in the motor measured through temperature channels 1 ... 4.

Index:
[0] = Temperature channel 1
[1] = Temperature channel 2
[2] = Temperature channel 3
[3] = Temperature channel 4

Note: For a value not equal to -200.0 °C, the following applies:
- this temperature display is valid.
- a KTY sensor is connected.
For a value equal to -200.0 °C, the following applies:
- this temperature display is not valid (temperature sensor error).
- A PTC sensor or bimetallic NC contact is connected.
- the temperature sensor evaluation is de-activated (p0600 = 0 or p0601 = 0).
- the sensor channel is de-activated (p460x = 0 or p461x = 0).

r4640[0...95] Encoder diagnostics state machine / Enc diag stat_ma

ENC, VECTOR_G

Min	**Max**	**Factory setting**
-	-	-

Description: Displays the encoder diagnostics for the PROFIdrive interface.

p4641[0...2] OEM encoder diagnostic signal selection / OEM enc diag sel

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Trace functionality for OEM encoder manufacturers.

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

p4650 Encoder functional reserve component number / Enc fct_res num

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	399	0

Description: Sets the component number (p0141) of the encoder whose functional reserve is to be displayed (r4651).

Dependency: Refer to: r4651

r4651[0...3] Encoder functional reserve / Enc fct_reserve

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the functional reserve of the encoder selected via p4650.

0 ... 25 %:

The function limit has been reached. A service is recommended.

26 ... 100 %:

The encoder is working in the specified range.

Index:
[0] = Function reserve 1
[1] = Function reserve 2
[2] = Function reserve 3
[3] = Function reserve 4

Dependency: Refer to: p4650

Note: Value = 999 means:

- the component specified in p4650 is not connected
- the encoder does not support the display of the functional reserve

p4652 XIST1_ERW reset mode / XIST1_ERW res mode

ENC

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 4750
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Sets the mode to reset the actual value in XIST_ERW (CO: r4653).

Value:
0: Inactive
1: Reset with zero mark
2: Reset with BICO
3: Reset with selected zero mark

Dependency: Refer to: r4653, r4654, p4655

Note: If value = 1:

The value in XIST1_ERW is reset when passing every zero mark.

If value = 2:

The value in XIST1_ERW is reset with a 0/1 edge via binector input p4655.

If value = 3:

The value in XIST1_ERW is reset after a 0/1 edge via binector input p4655 when passing the next zero mark.

p4652[0...2] XIST1_ERW reset mode / XIST1_ERW res mode

VECTOR_G

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 4750
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Sets the mode to reset the actual value in XIST_ERW (CO: r4653).

Value:
0: Inactive
1: Reset with zero mark
2: Reset with BICO
3: Reset with selected zero mark

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: r4653, r4654, p4655

Note: If value = 1:

The value in XIST1_ERW is reset when passing every zero mark.

If value = 2:

The value in XIST1_ERW is reset with a 0/1 edge via binector input p4655.

If value = 3:

The value in XIST1_ERW is reset after a 0/1 edge via binector input p4655 when passing the next zero mark.

p4670[0...n] Analog sensor configuration / Ana_sens config

ENC, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the configuration for evaluation on the analog sensor.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
06	Set velocity to 0	Yes	No	-
08	Pos val range	0.0 / 1.0 pulse	-0.5 / +0.5 pulse	-
09	Fault/alarm messages	Alarm	Fault	-
10	Channel B act	Yes	No	-
11	Channel A act	Yes	No	-
13	Commutation angle constant	Yes	No	-
14	Suppress faults	Yes	No	-
31	Extrapolation	ON	OFF	-

Notice: Re bit 06:

Setting the bit sets the velocity actual value (r0061) permanently to 0.

Re bit 13:

Setting the bit sets the commutation angle permanently to the commutation angle offset (p0431).

Note: Re bit 09:

A setting of bit = 0 will trigger a fault for the relevant channel if the actual value is invalid.

A setting of bit = 1 will trigger an alarm for the relevant channel if the actual value is invalid.

Re bit 10, 11:

If both channels are activated, the actual value is generated from the mean value of both channels. If a channel fails (actual value invalid), it is not included when the mean value is generated.

Re bit 14:

The bit is only evaluated for encoder 1. Otherwise no effect.

p4671[0...n] Analog sensor input / Ana_sens inp

ENC, VECTOR_G	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 4
	Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	3	0

Description: Sets the input circuit for the analog sensor.

Value:
0: Differential
1: Single-ended A, B
2: Single-ended A*, B*
3: Single-ended A, B sensitive

Note: p4671 = 0:

The two signals on a track are evaluated differentially.

p4671 = 1:

Only the non-inverted signal on a track is evaluated.

p4671 = 2:

Only the inverted signal on a track is evaluated.

p4671 = 3:

Only the non-inverted signal on a track (high resolution) is evaluated.

p4672[0...n] Analog sensor channel A voltage at actual value zero / Ana_sens A U at 0

ENC, VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-10.0000 [V]	10.0000 [V]	0.0000 [V]

Description: Sets the voltage when the connected sensor is at actual value zero.

At this voltage channel A supplies an actual value of zero.

p4673[0...n] Analog sensor channel A voltage per encoder period / Ana_sens A U/per

ENC, VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-10.0000 [V]	10.0000 [V]	6.0000 [V]

Description: Sets the output voltage range to be mapped for the connected analog sensor.

The voltage range is determined by the following parameters:

- p4672 (voltage at actual value 0)
- p4673 (voltage per encoder period)

Note: The minimum actual value which can be mapped is equal to p4672 - p4673/2.

The maximum actual value which can be mapped is equal to p4672 + p4673/2.

p4674[0...n] Analog sensor channel B voltage at actual value zero / Ana_sens B U at 0

ENC, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.0000 [V]	10.0000 [V]	0.0000 [V]

Description: Sets the voltage when the connected sensor is at actual value zero.
At this voltage channel B supplies an actual value of zero.

p4675[0...n] Analog sensor channel B voltage per encoder period / Ana_sens B U/per

ENC, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.0000 [V]	10.0000 [V]	6.0000 [V]

Description: Sets the output voltage range to be mapped for the connected analog sensor.
The voltage range is determined by the following parameters:
- p4674 (voltage at actual value 0)
- p4675 (voltage per encoder period)

Note: The minimum actual value which can be mapped is equal to p4674 - p4675/2.
The maximum actual value which can be mapped is equal to p4674 + p4675/2.

p4676[0...n] Analog sensor range limit threshold / Ana_sens lim thr

ENC, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	100.0 [%]	100.0 [%]

Description: Sets the threshold for limit monitoring of the absolute actual value on the analog sensor.
If this threshold is overshot by the actual value of a channel, a corresponding fault/alarm (p4670.9) is output.

Dependency: Refer to: p4673, p4675

p4677[0...n] Analog sensor LVDT configuration / Ana_sens LVDT conf

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 4

P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for LVDT mode on the analog sensor.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	LVDT ON	Yes	No	-
01	Track B excitation	Yes	No	-
02	Fixed value amplitude	Yes	No	-
03	Fixed value amplitude and phase	Yes	No	-

p4678[0...n] Analog sensor LVDT ratio / An_sens LVDT ratio

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	200.00 [%]	50.00 [%]

Description: Sets the ratio for the LVDT sensor.

p4679[0...n] Analog sensor LVDT phase / An_sens LVDT ph

ENC, VECTOR_G

Can be changed: C2(4), T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-360.00 [°]	360.00 [°]	0.00 [°]

Description: Sets the phase for the LVDT sensor.

p4680[0...n] Zero mark monitoring tolerance permissible / ZM_monit tol perm

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1000	4

Description: Sets the permissible tolerance in encoder pulses for the zero mark distance in the context of zero mark monitoring.

Causes fault F3x100 to appear less frequently.

p4681[0...n] Zero mark monitoring tolerance window limit 1 positive / ZM tol lim 1 pos

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1000	2

Description: Sets the positive tolerance window in encoder pulses for limit 1 for the zero mark monitoring.

If the deviation is less than this limit, then the pulse number is not corrected. If it is higher than this limit, fault F3x131 is triggered.

If fault F3x131 is re-parameterized to alarm (A) or no message (N), the encoder pulses which have not been corrected are added to the accumulator (p4688). The accumulator can be de-activated using p0437.7.

Dependency: Refer to: p0437, p4688

Note: This monitoring is activated by setting p0437.2 = 1 (position actual value correction).

The positive limit describes additional pulses due to EMC.

p4682[0...n] Zero mark monitoring tolerance window limit 1 negative / ZM tol lim 1 neg

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1001	0	-1001

Description: Sets the negative tolerance window in encoder pulses for limit 1 for the zero mark monitoring.

If the deviation is less than this limit, the PPR is not corrected. If it is higher than this limit, fault F3x131 is triggered.

If fault F3x131 is re-parameterized to alarm (A) or no message (N), the encoder pulses which have not been corrected are added to the accumulator (p4688). The accumulator can be de-activated using p0437.7.

Dependency: Refer to: p0437, p4681, p4688

Note: This monitoring is activated by setting p0437.2 = 1 (position actual value correction).

For a set value = -1001, the negated value of p4681 is effective.

The negative limit describes the pulses lost due to a covered glass panel in the incremental encoder.

p4683[0...n] Zero mark monitoring tolerance window alarm threshold positive / ZM tol A_thr pos

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	100000	0

Description: Sets the positive tolerance window in encoder pulses for limit 2 for the zero mark monitoring.

If the zero mark deviation is higher than the tolerance set in p4681 and p4682 and fault F3x131 is re-parameterized to alarm (A) or no message (N), the accumulator p4688 is compared with this parameter and, if applicable, alarm A3x422 is output for 5 seconds.

Dependency: Refer to: p0437, p4681, p4682, p4688

Note: Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction).

p4684[0...n] Zero mark monitoring tolerance window alarm threshold negative / ZM tol A_thr neg

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-100001	0	-100001

Description: Sets the negative tolerance window in encoder pulses for limit 2 for the zero mark monitoring.

If the zero mark deviation is higher than the tolerance set in p4681 and p4682 and fault F3x131 is re-parameterized to alarm (A) or no message (N), the accumulator p4688 is compared with this parameter and, if applicable, alarm A3x422 is output for 5 seconds.

Dependency: Refer to: p0437, p4683, p4688

Note: Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction).

For a set value = -100001, the negated value of p4683 is effective.

p4685[0...n] Speed actual value mean value generation / n_act mean val

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	20	0

Description: Sets the number of current controller clock cycles for mean value generation of the speed actual value.

Note: Value = 0, 1: No mean value generation.

Higher values also mean higher dead times for the speed actual value.

p4686[0...n] Zero mark minimum length / ZM min length

ENC, VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	10	1

Description: Sets the minimum length for the zero mark in 1/4 encoder pulses.

Dependency: Refer to: p0425, p0437

Note: The value for the minimum length of the zero mark must be set less than p0425.

The parameter is activated using p0437.1 = 1 (zero mark edge detection).

p4688 CO: Zero mark monitoring differential pulse count / ZM diff_pulse qty

ENC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-2147483648	2147483647	0

Description: Displays the number of differential pulses for the zero mark monitoring that have accumulated.

If fault F3x131 is re-parameterized to alarm (A) or no message (N), the encoder pulses which have not been corrected are added to the accumulator (p4688).

Dependency: Refer to: p4681, p4682, p4683, p4684

Note: The display can only be reset to zero.

p4688[0...2] CO: Zero mark monitoring differential pulse count / ZM diff_pulse qty

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	399	0

Description: Sets the component number for the SMI/DQI for which motor and/or encoder data should be saved, deleted or downloaded.

Dependency: Refer to: p4691, p4692, p4693

Note: DQI: DRIVE-CLiQ Sensor Integrated

SMI: SINAMICS Sensor Module Integrated

p4691	SMI spare part save/download data / Save/DL SMI data		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	39	0

Description: Setting for the saving/downloading/deletion of motor and/or encoder data for the component specified in p4690 (SMI/DQI).

A backup of this data can be saved to non-volatile memory. The backup procedure is performed automatically as part of the function for saving to non-volatile memory (p0977 = 1 or "Copy RAM to ROM"). If a part is replaced, the saved data can be reloaded.

Procedure:

p4690 = set component number

p4691 = 1, 2, 30: Set the required procedure (save/download/delete).

p4691 = 9, 10, 36: Feedback signal on successful completion of the procedure.

p4691 = 11... 22, 37, 38: Error values if the procedure could not be executed successfully.

Value:
0: Inactive
1: Save SMI data
2: Download SMI data
9: SMI data downloaded and POWER ON required for component
10: SMI data backup complete
11: SMI data backup for selected component not found
12: Selected component not available or not connected
13: Insufficient memory space for backup
14: Format of saved data is incompatible
15: Transfer fault during data download
16: Transfer fault during data backup
17: Data backup does not match parameterized encoder/motor

18: Data backup directory not permissible
19: Component already contains data
20: Component does not contain any data
21: Component is not an SMI or a DQI
22: SMI data cannot be downloaded for component
30: Delete SMI data
35: Confirmation of SMI data delete required
36: SMI data deleted and POWER ON required for component
37: Access level not sufficient for delete
38: Delete SMI data not permitted for component
39: SMI data for component cannot be deleted

Dependency: Refer to: p4690, p4692, p4693

Notice: Once SMI/DQI data has been deleted or downloaded successfully, the component has to be powered up.

Note: SMI: SINAMICS Sensor Module Integrated

DQI: DRIVE-CLiQ Sensor Integrated

Help for error value = 11:

- Save the data for the original SMI on the memory card.

- Use an SMI with a suitable hardware version.

Help for error value = 12:

- Set the correct component number or connect the component.

Help for error value = 13:

- Use a memory card with more memory space.

Help for error value = 14:

- Create a data backup on the memory card corresponding to the SMI type.

Help for error value = 15:

- Check the DRIVE-CLiQ wiring for the component.

Help for error value = 16:

- Check the DRIVE-CLiQ wiring for the component.

Help for error value = 17:

- Save the data for the original SMI on the memory card.

Help for error value = 18:

- Set parameter p4693 to an appropriate value.

Help for error value = 19:

- Perform an SMI delete or use a blank SMI.

Help for error value = 20:

- Use an SMI that is not blank.

Help for error value = 21:

- Set the correct component number (p4690).

Note for error value = 22:

- Data cannot be downloaded for component.

Help for error value = 35:

- Reset parameter p4691 to 30.

Help for error value = 37:

- Set the access level to Expert or higher.

Help for error value = 38:

- Insert the SMI/DQI into the actual topology as an additional component (component number >= 200).

- Set the component number from the actual topology (p4690 >= 200).

- Set the correct component number (p4690 >= 200).

Note for error value = 39:

- SMI already deleted or too old. Delete not possible.

p4692 SMI spare part save data of all SMIs / Save SMI data

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	29	0

Description: Setting to back up the data of all SMIs and DQIs featured in the target topology.

Value:
0: Inactive
1: Save data of all SMIs and DQIs
10: Save all data successful
13: Insufficient memory space for backup
16: Transfer fault during data backup
20: Component does not contain any data
29: Not all components from target topology saved

Note: SMI: SINAMICS Sensor Module Integrated

p4692 = 10: Automatic on successful completion of backup procedure.

p4692 = 13, 16, 20, 29: Error values if the procedure could not be executed successfully.

The procedure must be repeated if the data save operation was interrupted (e.g. if the power supply voltage failed).

Help for error value = 13:

- Use a memory card with more memory space.

Help for error value = 16:

- check the DRIVE-CLiQ wiring.

Help for error value = 20:

- Use an SMI that is not blank.

Help for error value = 29:

- Check and correct the target and actual topologies for the SMIs.

- Repeat the save procedure.

p4693[0...1] SMI spare part data backup directory / SMI dat_bkup dir

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	399	0

Description: Sets the directory for downloading and saving data.

Example:

The SMI has the component number 5 and the SMI data (motor/encoder data) is to be stored in subdirectory C205.

--> p4690 = 5, p4693[0] = 205, p4691 = 1

Index:
[0] = Subdirectory selection
[1] = Reserved

Dependency: Refer to: p4691, r4694

Notice: If p4693[0] is not equal to 0 and p4693[0] is not equal to p4690, the following applies:

- Only a number >= 200 may be selected for the subdirectory when saving.

- In the case of downloads, a selection for the subdirectory may only be made for an SMI/DQI with a component number >= 200 (preliminary component number) (p4690 >= 200).

Note: DQI: DRIVE-CLiQ Sensor Integrated

SMI: SINAMICS Sensor Module Integrated

Re index 0:

This index is used to select the subdirectory for saving and downloading data. The motor order number (MLFB) of the corresponding data backup is displayed in r4694.

For p4693[0] = 0, the following applies:

The directory is determined by the setting of p4690.

r4694[0...19] SMI spare part data backup motor order number / SMI dat_bkup MLFB

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the motor order number (MLFB) of the data backup selected with p4693.

Dependency: Refer to: p4691, p4692

Caution: If the selected subdirectory contains a number of data sets, "More Datasets" is displayed in r4694[0...19].

If there is no SMI data (motor/encoder data) in the selected subdirectory or if the selected subdirectory does not exist, the following applies:

- The number of the next subdirectory located is displayed.
- This subdirectory is not checked for valid SMI data.
- If another subdirectory cannot be located, nothing is displayed in r4694[0...19].

Note: SMI: SINAMICS Sensor Module Integrated

p4700[0...1] Trace control / Trace control

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	0	1	0

Description: Setting to control the trace function.

Value:
0: Stop trace
1: Start trace

Index:
[0] = Trace 0
[1] = Trace 1

p4701 Measuring function control / Meas fct ctrl

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	0	3	0

Description: Setting to control the measurement function.

Value:
0: Stop measuring function
1: Start measuring function
2: Measuring function check parameterization
3: Start measuring function without enable signals

p4703[0...1] Trace options / Trace options

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	-	-	0000 bin

Description: Sets the options for the trace.

Index:
[0] = Trace 0
[1] = Trace 1

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Automatically start trace with time slices	Yes	No	-

Dependency: Refer to: p4700

Note: Re bit 00:

0: The trace starts with p4700 as before.

1: When powering up, the trace starts immediately with the saved parameter settings with the start of the time slices.

r4705[0...1] Trace status / Trace status

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	4	-

Description: Displays the actual status of the trace.

Value:
0: Trace inactive
1: Trace is recording presamples
2: Trace is waiting for trigger event
3: Trace is recording
4: Recording (trace) ended

Index:
[0] = Trace 0
[1] = Trace 1

r4706 Measuring function status / Meas fct status

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	5	-

Description: Displays the actual status of the measuring function.

Value:
0: Measurement function inactive
1: Measuring function parameterization checked
2: Measuring function waits for stabilizing time
3: Measuring function recording (tracing)
4: Measuring function trace ended with error
5: Measuring function trace successfully completed

p4707 Measurement function configuration / Meas fct config

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to configure the measurement function.

Value:
0: Standard
1: Free meas fct

Dependency: The parameter cannot be changed when the measurement function has been started (r4706 = 2, 3).

Note: This parameter involves the free measuring functions and is only active for p4810=6.

For value = 0:

The free measuring function is parameterized with master control.

For value = 1:

The free measuring function is parameterized without master control.

r4708[0...1] Trace memory space required / Trace mem required

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the required memory in bytes for the actual parameterization.

Index:
[0] = Trace 0
[1] = Trace 1

Dependency: Refer to: r4799

r4709[0...1] Trace memory space required for measuring functions / Trace mem required

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the required memory in bytes for the actual parameterization.
This applies, if the trace for the measurement functions is used.

Index:
[0] = Trace 0
[1] = Trace 1

Dependency: Refer to: r4799

p4710[0...1] Trace trigger condition / Trace Trig_cond

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
1	8	2

Description: Sets the trigger condition for the trace.

Value:
1: Immediate trace start
2: Positive edge
3: Negative edge
4: Entry to hysteresis band
5: Leaving hysteresis band
6: Trigger at bit mask
7: Start with function generator
8: Trigger at bit mask with edge

Index:
[0] = Trace 0
[1] = Trace 1

p4711[0...5] Trace trigger signal / Trace trig_signal

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	0

Description: Selects the trigger signal for the trace.

Index: [0] = Trace 0 parameter in BICO format
[1] = Trace 1 parameter in BICO format
[2] = Trace 0 PINx with DO Id and chart Id
[3] = Trace 0 PINx with block Id and PIN Id
[4] = Trace 1 PINy with DO Id and chart Id
[5] = Trace 1 PINy with block Id and PIN Id

Dependency: Only effective when p4710 does not equal 1.

Note: It only makes sense to trace the PINs using the commissioning software.

For index 2(4) and 3(5) equal to zero, index 0(1) can only be written and vice versa.

Re index 0 ... 1:

Here, the trigger signal for trace 0 or 1 is entered as parameter in the BICO format.

For trace with a physical address (p4789), the data type of the trigger signal is set here.

Re index 2 ...3:

The triggering PIN for trace 0 is entered here.

Index 2 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart

Index 3 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN

Re index 4 ... 5:

The triggering PIN for trace 1 is entered here.

Index 4 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart

Index 5 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN

p4712[0...1] Trace trigger threshold / Trace trig_thresh

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36	340.28235E36	0.00

Description: Sets the trigger threshold for the trace.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 2, 3.

p4713[0...1] Trace tolerance band trigger threshold 1 / Trace trig thr 1

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36	340.28235E36	0.00

Description: Sets the first trigger threshold for trigger via tolerance band.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 4, 5.

p4714[0...1] Trace tolerance band trigger threshold 2 / Trace trig thr 2

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36	340.28235E36	0.00

Description: Sets the second trigger threshold for trigger via tolerance band

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 4, 5.

p4715[0...1] Trace bit mask trigger, bit mask / Trace trig mask

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	4294967295	0

Description: Sets the bit mask for the bit mask trigger.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 6.

p4716[0...1] Trace bit mask trigger trigger condition / Trace Trig_cond

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	4294967295	0

Description: Sets the trigger condition for bit mask trigger.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 6.

p4717 Measuring function number of averaging operations / Meas fct avg qty

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	255	0

Description: Sets the number of averaging operations for the measuring function.

p4718 Measuring function number of stabilizing periods / MeasFct StabPerQty

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	255	0

Description: Sets the number of stabilizing periods for the measuring function.

r4719[0...1] Trace trigger index / Trace Trig_index

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the trigger index in the trace buffer. The trigger event occurred at this point.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only valid when p4705 = 4.

p4720[0...1] Trace recording cycle / Trace record_cyc

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.000 [ms]	60000.000 [ms]	1.000 [ms]

Description: Sets the recording cycle for the trace.

Index: [0] = Trace 0
[1] = Trace 1

p4721[0...1] Trace recording time / Trace record_time

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.000 [ms]	3600000.000 [ms]	1000.000 [ms]

Description: Sets the recording time for the trace.

Index: [0] = Trace 0
[1] = Trace 1

p4722[0...1] Trace trigger delay / Trace trig_delay

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-3600000.000 [ms]	3600000.000 [ms]	0.000 [ms]

Description: Sets the trigger delay for the trace.

Trigger delay < 0:

Pretrigger: Tracing (recording) starts the selected time before the trigger event actually occurs.

Trigger delay > 0:

Post trigger: Tracing does not start until the set time after the trigger event.

Index: [0] = Trace 0
[1] = Trace 1

p4723[0...1] Trace time slice cycle / Trace cycle

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.03125 [ms]	4.00000 [ms]	0.12500 [ms]

Description: Sets the time slice cycle in which the trace is called.

Index: [0] = Trace 0
[1] = Trace 1

p4724[0...1] Trace average in the time range / Trace average

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0.

The trace (record) buffer is sub-divided into memory banks, each containing 16384 values. Parameter p4795 can be used to toggle between the individual banks.

Example A:

The first 16384 values of signal 0, trace 0 are to be read out.

In this case, memory bank 0 is set with p4795 = 0. The first 16384 values can now be read out using r4740[0] to r4740[16383].

Example B:

The values 16385 to 32768 from signal 0, trace 0 are to be read out.

In this case, memory bank 1 is set with p4795 = 1. The values can now be read out in r4740[0] to r4740[16383].

Dependency: Refer to: p4795

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0 as integer number.

Note: For signals, data type I32 or U32, the trace buffer is assigned as follows:

r4760[0] = value 0

r4760[1] = value 1

...

r4760[8191] = value 8191

For signals, data type I16 or U16, the trace buffer is assigned as follows:

r4760[0] = value 1 (bit 31 ... 16) and value 0 (bit 15 ... 0)

r4760[1] = value 3 (bit 31 ... 16) and value 2 (bit 15 ... 0)

...

r4760[8191] = value 16383 (bit 31 ... 16) and value 16382 (bit 15 ... 0)

For signals, data type I8 or U8, the trace buffer is assigned as follows:

r4760[0] = value 3 (bit 31 ... 24) value 2 (bit 23 ... 16) value 1 (bit 15 ... 8) value 0 (bit 7 ... 0)

r4760[1] = value 7 (bit 31 ... 24) value 6 (bit 23 ... 16) value 5 (bit 15 ... 8) value 4 (bit 7 ... 0)

...

r4760[8191] = value 32767 (bit 31 ... 24) value 32766 (bit 23 ... 16) value 32765 (bit 15 ... 8) value 32764 (bit 7 ... 0)

r4761[0...16383] Trace 0 trace buffer signal 1 / Trace 0 tr sig 1

0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin

Description: Sets the physical address for the eighth signal to be traced.

The data type is defined using p4737.

Index: [0] = Trace 0
[1] = Trace 1

p4789[0...1] Trace physical address trigger signal / Trace PhyAddr Trig

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the physical address for the trigger signal.

The data type is defined by making the appropriate selection in p4711.

Index: [0] = Trace 0
[1] = Trace 1

r4790[0...1] Trace data type 5 traced / Trace rec type 5

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the recorded data type 5 for the trace.

Index: [0] = Trace 0
[1] = Trace 1

r4791[0...1] Trace data type 6 traced / Trace rec type 6

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the recorded data type 6 for the trace.

Index: [0] = Trace 0
[1] = Trace 1

r4792[0...1] Trace data type 7 traced / Trace rec type 7

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the recorded data type 7 for the trace.

Index: [0] = Trace 0
[1] = Trace 1

r4793[0...1] Trace data type 8 traced / Trace rec type 8

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the recorded data type 8 for the trace.

Index: [0] = Trace 0
[1] = Trace 1

p4795 Trace memory bank changeover / Trace mem changeov

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	500	0

Description: Changes over the memory bank to read out the contents of the trace buffer.

Dependency: Refer to: r4740, r4741, r4742, r4743, r4750, r4751, r4752, r4753

r4797[0...1] Trace 0 trigger instant / Trace 0 t_trigger

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the instant in time for fulfilling the trigger condition for trace recorder 0.
The time comprises milliseconds (index 0) and days (index 1).

Index: [0] = Milliseconds
[1] = Days

Dependency: Refer to: r2114, r3102, r4719

Notice: The accuracy of the trigger instant depends on the accuracy of the underlying basis time.

For clarification:

The trigger instant is calculated with a µs accuracy. If the underlying basis time is only available with ms accuracy, then as a result of rounding effects, an inaccuracy of 1 ms can occur.

When referred to r4719, the trigger instant can therefore deviate somewhat.

Note: If the time calculation of the drive can be synchronized with a higher-level control, then this time can be taken from the actual UTC time (r3102). Otherwise, the time is based on the system runtime (r2114).

r4798[0...1] Trace 1 trigger instant / Trace 1 t_trigger

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the instant in time for fulfilling the trigger condition for trace recorder 1.

The time comprises milliseconds (index 0) and days (index 1).

Index: [0] = Milliseconds
[1] = Days

Dependency: Refer to: r2114, r3102, r4719

Notice: The accuracy of the trigger instant depends on the accuracy of the underlying basis time.

For clarification:

The trigger instant is calculated with a µs accuracy. If the underlying basis time is only available with ms accuracy, then as a result of rounding effects, an inaccuracy of 1 ms can occur.

When referred to r4719, the trigger instant can therefore deviate somewhat.

Note: If the time calculation of the drive can be synchronized with a higher-level control, then this time can be taken from the actual UTC time (r3102). Otherwise, the time is based on the system runtime (r2114).

r4799 Trace memory location free / Trace mem free

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the free memory for the trace in bytes.

Dependency: Refer to: r4708

p4800 Function generator control / FG control

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	3	0

Description: The function generator is started with p4800 = 1.

The signal is only generated for a 1 signal of binector input p4819.

Value:
0: Stop function generator
1: Start function generator
2: Check function generator parameterization
3: Start function generator without enable signals

Dependency: Refer to: p4819

r4805 Function generator status / FG status

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dyn. index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min	Max	Factory setting
0	6	-

Description: Displays the actual status of the function generator.

Value:
0: Inactive
1: Generate accelerating ramp to offset
2: Generate parameterized signal shape
3: Generate braking ramp
4: Function generator stopped due to missing enable signals
5: Function generator waits for BI: p4819
6: Function generator parameterization has been checked

Dependency: Refer to: p4800, p4819

r4806.0 BO: Function generator status signal / FG status signal

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dyn. index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min	Max	Factory setting
-	-	-

Description: Displays the status of the function generator.

0 signal: Function generator inactive

1 signal: Function generator running

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Bit 0	ON	OFF	-

p4810 Function generator mode / FG operating mode

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dyn. index:** - | **Func. diagram:** -
P-Group: Trace and function generator | **Units group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min	Max	Factory setting
0	99	0

Description: Sets the operating mode of the function generator.

Value:
0: Connection at connector output r4818
1: Connection at current setpoint after filter and r4818
2: Connection as disturbing torque and r4818
3: Connection at speed setpoint after filter and r4818
4: Connection at current setpoint before filter and r4818
5: Connection at speed setpoint before filter and r4818
6: Connection for free measurement function r4818 and r4834
99: Connection at physical address and r4818

p4812 — Function generator physical address / FG phys address

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	4294967295	0

Description: Sets the physical address where the function generator is to be connected.

Dependency: Only effective when p4810 = 99.

p4813 — Function generator physical address reference value / FG phys addr ref

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
1.00	1000000.00	1.00

Description: Sets the reference value for 100 % for referred inputs.

Dependency: Only effective when p4810 = 99.

p4815[0...2] — Function generator drive number / FG drive number

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	65535	0

Description: Selects the required drive where the function generator is to be connected.

Index:
[0] = First drive for connection
[1] = Second drive for connection
[2] = Third drive for connection

Dependency: Only effective when p4810 = 1, 2, 3, 4 or 5.

Note: For the function generator, only type SERVO, VECTOR or DC_CTRL type drives can be used.

p4816 — Function generator output signal integer number scaling / FG outp integ scal

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-2147483648	2147483647	0

Description: Sets the scaling for the integer number of the output signal for the function generator.

Dependency: Refer to: r4805, r4817

Note: The parameter can only be changed in the following operating states:
r4805 = 0, 4, 6

r4817 CO: Function generator output signal integer number / FG outp integ no.

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the integer number of the output signal for the function generator.

Dependency: Refer to: p4816

Note: The value is output independent of the function generator operating mode.

r4818 CO: Function generator output signal / FG outp_sig

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 0
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the output signal for the function generator.

Dependency: Refer to: p4810

Note: The value is displayed independently of the function generator mode.

p4819 BI: Function generator control / FG control

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source to control the function generator.

When the function generator is running, signal generation is stopped with a 0 signal from BI: p4819 and p4800 is set to 0.

Dependency: Refer to: p4800

p4820 Function generator signal shape / FG signal shape

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
1	5	1

Description: Sets the signal to be generated for the function generator.

Value:
1: Square-wave
2: Staircase
3: Delta
4: Binary noise - PRBS (Pseudo Random Binary Signal)
5: Sine-wave

p4821	Function generator period / FG period duration		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	0.00 [ms]	60000.00 [ms]	1000.00 [ms]

Description: Sets the period of the signal to be generated for the function generator.

Dependency: Ineffective when p4820 = 4 (PRBS).

p4822	Function generator pulse width / FG pulse width		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	0.00 [ms]	60000.00 [ms]	500.00 [ms]

Description: Sets the pulse width for the signal to be generated for the function generator.

Dependency: Only effective when p4820 = 1 (square-wave).

p4823	Function generator bandwidth / FG bandwidth		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	0.0025 [Hz]	16000.0000 [Hz]	4000.0000 [Hz]

Description: Sets the bandwidth for the signal to be generated for the function generator.

Dependency: Only effective when p4820 = 4 (PRBS).

Refer to: p4830

p4824	Function generator amplitude / FG amplitude		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	-1600.00 [%]	1600.00 [%]	5.00 [%]

Description: Sets the amplitude for the signal to be generated for the function generator.

Dependency: Units are dependent on p4810.

If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current).

If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).

p4825	Function generator 2nd amplitude / FG 2nd amplitude		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	-1600.00 [%]	1600.00 [%]	7.00 [%]

Description: Sets the second amplitude for the signal to be generated for the function generator.

Dependency: Only effective for p4820 = 2 (staircase).
Units are dependent on p4810.
If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current).
If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).

p4826 Function generator offset / FG offset

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-1600.00 [%]	1600.00 [%]	0.00 [%]

Description: Sets the offset (DC component) of the signal to be generated for the function generator.

Dependency: Units are dependent on p4810.
If p4810 = 1, 2, 4: The offset is referred to p2002 (reference current).
If p4810 = 3, 5: The offset is referred to p2000 (reference speed).
If p4810 = 2: In order to avoid the undesirable effects of play (backlash), the offset does not act on the current setpoint, but instead on the speed setpoint.

p4827 Function generator ramp-up time to offset / FG ramp-up offset

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.00 [ms]	100000.00 [ms]	32.00 [ms]

Description: Sets the ramp-up time to the offset for the function generator.

p4828 Function generator lower limit / FG lower limit

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-10000.00 [%]	0.00 [%]	-100.00 [%]

Description: Sets the lower limit for the function generator.

Dependency: For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).

p4829 Function generator upper limit / FG upper limit

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.00 [%]	10000.00 [%]	100.00 [%]

Description: Sets the upper limit for the function generator.

Dependency: For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).

p4830 Function generator time slice cycle / FG time slice

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.03125 [ms]	2.00000 [ms]	0.12500 [ms]

Description: Sets the time slice cycle in which the function generator is called.

p4831 Function generator amplitude scaling / FG amplitude scal

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.00000 [%]	200.00000 [%]	100.00000 [%]

Description: Sets the scaling for the amplitude of the signal waveforms for all output channels.

The value can be changed while the function generator is running.

p4832[0...2] Function generator amplitude scaling / FG amplitude scal

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36 [%]	340.28235E36 [%]	100.00000 [%]

Description: Sets the scaling for the amplitude of the signal waveforms separately for each output channel.

The value cannot be changed while the function generator is running.

Index:
[0] = First drive for connection
[1] = Second drive for connection
[2] = Third drive for connection

p4833[0...2] Function generator offset scaling / FG offset scal

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36 [%]	340.28235E36 [%]	100.00000 [%]

Description: Sets the scaling for the offset of the signal waveforms separately for each output channel.

The value cannot be changed while the function generator is running.

Index:
[0] = First drive for connection
[1] = Second drive for connection
[2] = Third drive for connection

r4834[0...4] CO: Function generator free measurement output signal / FG fr MeasFct outp

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 0
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the output signal for the free measurement function.

Index:
[0] = Signal 1
[1] = Signal 2
[2] = Signal 3
[3] = Signal 4
[4] = Signal 5

Dependency: Refer to: p4810

Note: The signals are only output in the "free measurement function" operating mode (p4810 = 6)

p4835[0...4] Function generator free measurement function scaling / FG fr MeasFct scal

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-200.00000 [%]	200.00000 [%]	100.00000 [%]

Description: Sets the scaling of the output signals for the free measurement function.

Index:
[0] = Signal 1
[1] = Signal 2
[2] = Signal 3
[3] = Signal 4
[4] = Signal 5

Note: The parameter cannot be changed when the measurement function has been started (r4706 = 2, 3).

p4840[0...1] MTrace cycle number setting / Cycle number

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	4294967295	0

Description: Sets the number of cycles of a multiple trace.

The multiple trace is de-activated with a value = 0.

Index:
[0] = Trace 0
[1] = Trace 1

Dependency: Refer to: r4841, p4844

Notice: A multiple trace can have a negative impact on the total system performance.

From their inherent principle of operation, flash memory cards are subject to wear as a result of write operations. As a consequence, the lifetime of flash memory cards is reduced when using the multiple trace functionality.

r4841[0...1] MTrace cycle actual display / Cycle act display

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the currently running cycle (including deadtime) of the multiple trace.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Refer to: p4840, p4844

p4844[0...1] MTrace ring buffer files number / Ring buff file qty

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
10	10	10

Description: Sets the number of ring buffer files for the measurement results of the multiple trace.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Refer to: p4840, r4841

r4950 OA DO-specific number / OA DO qty

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	16	-

Description: Displays the number of OA applications installed on this drive object.

Dependency: Refer to: r4951, r4952, r4955, p4956, r4957, r4958, r4959, r4960

Note: DO: Drive Object
OA: Open Architecture (OA application)

r4951 OA DO-specific identifier total length / OA DO id tot_lgth

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	144	-

Description: Displays the total length of the identifiers of the OA applications installed on this drive object.

Dependency: Refer to: r4950, r4952, r4955, p4956, r4957, r4958, r4959, r4960

Note: The identifier of an OA application comprises a maximum of 8 characters plus separator.

r4952 — OA DO-specific GUID total length / OA DO GUID length

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	288	-

Description: Displays the total length of the GUIDs of the OA applications installed on this drive object.

Dependency: Refer to: r4950, r4951, r4955, p4956, r4957, r4958, r4959, r4960

Note: The GUID of an OA application comprises 16 characters plus 1 character major information plus 1 character, minor information.

GUID: Globally Unique IDentifier

r4955[0...n] — OA DO-specific identifier / OA DO ident

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** r4951	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the identifier of the OA applications installed on this drive object.

r4955[0...8]: Identifier of OA application 1

r4955[9...17]: Identifier of OA applications 2, ...

Dependency: Refer to: r4950, r4951, r4952, p4956, r4957, r4958, r4959, r4960

Notice: If there is no OA application, then it is not possible to access an index.

p4956[0...n] — OA DO-specific activation / OA DO act

All objects

Can be changed: C1, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** r4950	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to activate the OA applications installed on this drive object.

r4956[0]: Activates OA application 1

r4956[1]: Activates OA application 2, ...

Value:
0: OA application inactive
1: OA application active

Dependency: Refer to: r4950, r4951, r4952, r4955, r4957, r4958, r4959, r4960

Notice: If there is no OA application, then it is not possible to access an index.

r4957[0...n] — OA DO-specific version / OA DO version

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** r4950	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4294967295	-

Description: Displays the version of the OA applications installed on this drive object.

r4957[0]: Version of OA application 1

r4957[1]: Version of OA application 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4958, r4959, r4960

Notice: If there is no OA application, then it is not possible to access an index.

Note: Example:

The value 1010100 should be interpreted as V01.01.01.00.

r4958[0...n] OA DO-specific interface version / OA DO interf_vers

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** r4950	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the interface version of OA applications installed on this drive object.

r4958[0]: Interface version of OA application 1

r4958[1]: Interface version of OA applications 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4959, r4960

Notice: If there is no OA application, then it is not possible to access an index.

Note: Example:

The value 1010100 should be interpreted as V01.01.01.00.

r4959[0...n] OA DO-specific GUID / OA DO GUID

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** r4952	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the GUIDs of the OA applications installed on this drive object.

r4959[0...15]: GUID of OA application 1

r4959[16]: Major information of OA application 1

r4959[17]: Minor information of OA application 1

r4959[18...33]: GUID of OA application 2

r4959[34]: Major information of OA application 2

r4959[35]: Minor information of OA application 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4960

Notice: If there is no OA application, then it is not possible to access an index.

r4960[0...n] OA DO-specific GUID drive object / OA DO GUID DO

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** r4952	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the GUIDs of this drive object of the OA applications installed on the memory card/device memory.

r4960[0...15]: GUID of this drive object of OA application 1

r4960[16]: Major information of this drive object of OA application 1

r4960[17]: Minor information of this drive object of OA application 1

r4960[18...33]: GUID of this drive object of OA application 2

r4960[34]: Major information of this drive object of OA application 2

r4960[35]: Minor information of this drive object of OA application 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4959

Notice: If there is no OA application, then it is not possible to access an index.

p4961[0...n] OA DO-specific logbook module selection / OA DO log module

All objects	**Can be changed:** T	**Calculated:** -	**Access level:** 4
	Data type: Unsigned32	**Dyn. index:** r4950	**Func. diagram:** -
	P-Group: OEM range	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0000 hex	FFFF FFFF hex	0000 hex

Description: Only for service purposes.

r4975 OA invalid number / OA inv no.

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: OEM range	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the number of invalid OA applications installed on the memory card/device memory.

Dependency: Refer to: r4976, r4978, r4979

Note: OA: Open Architecture (OA application)

r4976 OA invalid identifier total length / OA inv ID tot_lgth

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: OEM range	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the total length of the IDs of all the invalid OA applications installed on the memory card/device memory.

Dependency: Refer to: r4975, r4978, r4979

Note: The identifier of an invalid OA application comprises a maximum of 8 characters plus separator.

r4978[0...n] OA invalid identifier / OA inv ID

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned8	**Dyn. index:** r4976	**Func. diagram:** -
	P-Group: OEM range	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the IDs of all the invalid OA applications installed on the memory card/device memory.
r4978[0...8]: Identifier of invalid OA application 1
r4978[9...17]: Identifier of invalid OA application 2, ...

Dependency: Refer to: r4975, r4976, r4979

Notice: If there is no invalid OA application, then it is not possible to access an index.

r4979[0...n] OA invalid error code / OA inv error code

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** r4975	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the error code of the invalid OA applications installed on the memory card/device memory.

r4979[0]: Fault value of OA application 1

r4979[1]: Fault value of OA application 2, ...

Dependency: Refer to: r4975, r4976, r4978

Notice: If there is no invalid OA application, then it is not possible to access an index.

Note: The value in the error code must be interpreted in binary form. The bits have the following meaning:

Bit 0: Incompatible OA interface version.

Bit 1: OA application could not be loaded.

Bit 2: Incorrect description files.

Bit 3: OA application does not define a CPU type.

Bit 4: OA application for this device not supported (incorrect CPU type).

Bit 5: OA application for this device not supported (incorrect type ID).

Bit 6: Incorrect description files (Const/Startup incompatible).

r4985 OA number / OA no

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	16	-

Description: Displays the number of OA applications installed on the memory card/device memory.

Dependency: Refer to: r4986, r4987, r4988, r4989, r4990, r4991, r4992, r4993, r4994

Note: OA: Open Architecture (OA application)

r4986 OA identifier total length / OA id tot_length

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	144	-

Description: Displays the total length of the IDs of all the OA applications installed on the memory card/device memory.

Dependency: Refer to: r4985, r4987, r4988, r4989, r4990, r4991, r4992, r4993, r4994

Note: The identifier of an OA application comprises a maximum of 8 characters plus separator.

r4987 OA GUID total length / OA GUID tot_length

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	288	-

Description: Displays the total length of the GUIDs of all the OA applications installed on the memory card/device memory.

Dependency: Refer to: r4985, r4986, r4988, r4989, r4990, r4991, r4992, r4993, r4994

Note: The GUID of an OA application comprises 16 characters plus 1 character major information plus 1 character, minor information.
GUID: Globally Unique IDentifier

r4988[0...n] OA identifier / OA ID

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** r4986	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the IDs of all the OA applications installed on the memory card/device memory.
r4988[0...8]: Identifier of OA application 1
r4988[9...17]: Identifier of OA applications 2, ...

Dependency: Refer to: r4985, r4986, r4987, r4989, r4990, r4991, r4992, r4993, r4994

Notice: If there is no OA application, then it is not possible to access an index.

r4989[0...n] OA version / OA version

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** r4985	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the version of all the OA applications installed on the memory card/device memory.
r4989[0]: Version of OA application 1
r4989[1]: Version of OA application 2, ...

Dependency: Refer to: r4985, r4986, r4987, r4988, r4990, r4991, r4992, r4993, r4994

Notice: If there is no OA application, then it is not possible to access an index.

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r4990[0...n] OA interface version / OA interf_vers

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** r4985	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the interface version of all the OA applications installed on the memory card/device memory.
r4990[0]: Interface version of OA application 1
r4990[1]: Interface version of OA applications 2, ...

Dependency: Refer to: r4985, r4986, r4987, r4988, r4989, r4991, r4992, r4993, r4994

Notice: If there is no OA application, then it is not possible to access an index.

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r4991[0...n] OA GUID / OA GUID

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** r4987	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the GUID of all the OA applications installed on the memory card/device memory.

r4991[0...15]: GUID of OA application 1

r4991[16]: Major information of OA application 1

r4991[17]: Minor information of OA application 1

r4991[18...33]: GUID of OA application 2

r4991[34]: Major information of OA application 2

r4991[35]: Minor information of OA application 2, ...

Dependency: Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4992, r4993, r4994

Notice: If there is no OA application, then it is not possible to access an index.

r4992[0...n] OA GUID ES / OA GUID ES

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** r4987	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the GUID of all the OA applications installed on the memory card/device memory.

r4992[0...15]: GUID of OA application 1

r4992[16]: Major information of OA application 1

r4992[17]: Minor information of OA application 1

r4992[18...33]: GUID of OA application 2

r4992[34]: Major information of OA application 2

r4992[35]: Minor information of OA application 2, ...

Dependency: Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4991, r4993, r4994

Notice: If there is no OA application, then it is not possible to access an index.

r4993[0...n] OA activation status / OA act stat

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** r4985	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	-

Description: Displays the activation status of the OA applications installed on the memory card/device memory.

r4993[0]: Activates OA application 1

r4993[1]: Activates OA application 2, ...

Value:
0: OA application inactive
1: OA application active

Dependency: Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4991, r4992, r4994

Notice: If there is no OA application, then it is not possible to access an index.

r4994[0...n] OA properties / OA property

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** r4985	**Func. diagram:** -
P-Group: OEM range	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the properties of all the OA applications installed on the memory card/device memory.

r4994[0]: Version of OA application 1

r4994[1]: Version of OA application 2, ...

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Properties diagnostics bit 0	Yes	No	-
01	Properties diagnostics bit 1	Yes	No	-
02	Properties diagnostics bit 2	Yes	No	-
03	OEM	No	Yes	-
04	Properties diagnostics bit 4	Yes	No	-
05	Properties diagnostics bit 5	Yes	No	-

Dependency: Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4991, r4992, r4993

Notice: If there is no OA application, then it is not possible to access an index.

Note: The parameter is only for internal Siemens diagnostics.

p5300[0...n] Autotuning selection / Autotuning select

VECTOR_G (J_estimator)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 5045
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1	2	0

Description: Sets activation/de-activation of the "auto tuning" function.

To permanently save the values that have been set, the parameters must be saved in a non-volatile memory (p0977 = 1).

The individual measuring steps can be configured in the following parameters:

p5301 for "One Button Tuning" (p5300=1) - this function is being prepared

p5302 for "Online Tuning" (p5300=2)

Sets activation/de-activation of the "onlinetuning" function. The following parameters are written to when online tuning is activated: p430, p1160, p1400, p1413 - p1426, p1428, p1429, p1433 - p1435, p1441, p1460 - p1465, p1498, p1513, p1656 - p1676, p2533 - p2539, p2567, p2572, p2573, p5280

Value:
-1: Reset (restore default values)
0: Inactive
1: One Button Tuning
2: Online Tuning

Dependency: The prerequisite for the "auto tuning" function is that the "Moment of inertia estimator" function module is activated (r0108.10).

Refer to: p5301, p5302

Warning: Only the motor measuring system is taken into account when optimizing the position controller. If an external measuring system is used for the position control, then this can result in an unstable controller setting.

Caution: For some drive trains, the "onlinetuning" function can result in unstable settings. (motor makes a whistling sound). This is especially the case for high load moments of inertia, which are coupled to the motor through a low-frequency connection/coupling. This case, parameter p5272 or p5273 must be reduced.

Note: If p5300 = -1:

Autotuning is deactivated, and p5300 is automatically set to 0. In addition, the default setting values for the speed and position controller are restored.

If p5300 = 0:

Online tuning is inactive. To permanently save the values determined for the speed and position controllers, the parameters must be saved in a non-volatile memory (p0977 = 1).

The results of the moment of inertia estimator can be reset using p5300 = 0. The moment of inertia and the tuning parameters must be redetermined after p5300>0.

If p5300 = 1:

One Button Tuning is active. The moment of inertia is determined once using a test signal. The controller parameters and current setpoint filters are additionally determined once using a noise signal as excitation source.

If p5300 = 2:

Onlinetuning is active. The moment of inertia is estimated. The controller parameters are recalculated if the moment of inertia noticeably changes.

p5301[0...n] One Button Tuning configuration / OBT config

VECTOR_G (J_estimator)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0111 bin

Description: Setting the functions for One Button Tuning (p5300 = 1).

As long as autotuning is still active (p5300 <> 0), it is not possible to change the configuration.

A test signal is required for some measuring steps. Parameters p5307 to p5309 must be observed for this purpose.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Setting Kp	Yes	No	-
01	Setting current setpoint filter	Yes	No	-
02	Moment of inertia estimator	Yes	No	-
07	Synchronized axes	Yes	No	-

Dependency: Refer to: p5300

Note: Re bit 00:

The speed controller gain is determined and set using a noise signal.

Re bit 01:

Possibly required current setpoint filters are determined and set using a noise signal.

As a consequence, a higher dynamic performance can be achieved in the speed control loop.

Re bit 02:

Using this bit, the moment of inertia is determined using a test signal. If this bit is not set, then the load moment of inertia must be manually parameterized in parameter p1498. The test signal must have been previously set using parameters p5308 and p5309.

Re bit 07:

With this function, these axes are adapted to the dynamic response set in p5275. This is necessary for interpolating axes. The time in p5275 should be set according to the axis with the lowest dynamic response.

p5302[0...n] Online tuning configuration / OT config

VECTOR_G (J_estimator)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 1100 bin

Description: Setting the functions for online tuning (p5300 = 2).

As long as autotuning is still active (p5300 <> 0), it is not possible to change the configuration.

A noise signal is required for some measuring steps.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Setting Kp	Yes	No	-
01	Setting current setpoint filter	Yes	No	-
02	Moment of inertia estimator	Yes	No	-
03	Moment of inertia estimator	Cyclic	Once	-
06	Current setpoint filter adaptation	Yes	No	-
07	Synchronized axes	Yes	No	-

Dependency: This parameter can only be changed if p5300=0 has been parameterized.

Refer to: p5300

Caution: Please note the general conditions of the moment of inertia estimator, online tuning and adaptive resonance filter. See Function Manual FH1.

Note: Re bit 00: being prepared

The speed controller gain is determined and set using a noise signal.

Re bit 01: being prepared

Possibly required current setpoint filters are determined and set using a noise signal.

As a consequence, a higher dynamic performance can be achieved in the speed control loop.

Re bit 02:

Using this bit, the moment of inertia is determined while traversing (moment of inertia estimator). If this bit is not set, then the load moment of inertia must be manually parameterized in parameter p1498.

Re bit 03:

If "once" has been parameterized, then after successfully determining the moment of inertia p1498 the moment of inertia estimator is deactivated.

If "Cyclic" has been parameterized, then the moment of inertia is continually determined and the controller parameters adapted. After the moment of inertia has been successfully determined (r1407.26=1), we recommend that the parameter is saved. This means that after power on, the controller does not have to re-stabilize.

Re bit 06:

The adaptation of a current setpoint filter can be set here. See p5280-p5285.

This adaptation may be necessary if a mechanical resonance frequency changes in operation. It can also be used to dampen a fixed resonance frequency. Once the control loop has stabilized, this bit should be deactivated and the determined parameters saved in a non-volatile fashion.

Re bit 07:

With this function, these axes are adapted to the dynamic response set in p5275. This is necessary for interpolating axes. The time in p5275 should be set according to the axis with the lowest dynamic response.

r5397 Mot_temp_mod 3 ambient temperature image p0613 / AmbTmp image p0613

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8017
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the ambient temperature for motor temperature model 3.

This value is used to calculate the utilization display (p0034).

The parameter value is an image of p0613.

Dependency: Refer to: r0034

Note: Users cannot see and change parameter p0613 (only Siemens internal).

r5398[0...n] Mot_temp_mod 3 alarm threshold image p5390 / A thr image p5390

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the alarm threshold for monitoring the motor temperature for motor temperature model 3.
This value is used to calculate the utilization display (p0034).
The parameter value is an image of p5390.

Note: Users cannot see and change parameter p5390 (only Siemens internal).

r5399[0...n] Mot_temp_mod 3 fault threshold image p5391 / F thr image p5391

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: ASM, REL, FEM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Sets the fault threshold for monitoring the motor temperature for motor temperature model 3.
Fault F07011 is output after the fault threshold is exceeded.
The parameter value is an image of p5391.

Note: Users cannot see and change parameter p5391 (only Siemens internal).

r5600 Pe energy saving mode ID / Pe mode ID

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3

6: Shift by -120 °
7: Shift by +150 °
8: Shift by -150 °

Dependency: Refer to: p7003

Notice: The parameter is only evaluated if p7003 = 2.

Note: For p6397 = 0 the following applies: The second systems leads for a positive direction of rotation.

For p6397 = 1 the following applies: The second systems lags for a positive direction of rotation.

p6700[0...n] Voltage model angle smoothing / Volt_mod angle sm

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: ASM, PEM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	100 [ms]	0 [ms]

Description: Sets the smoothing of the flux orientation of the voltage model for a separately excited synchronous motor.

p6870[0...n] VSM offset voltage u1 - u2 / VSM offset u1 - u2

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-100.000 [V]	100.000 [V]	0.000 [V]

Description: Offset voltage between phases L1 and L2 for the Voltage Sensing Module (VSM). The value is determined with the drive switched-off and stationary if p6903 is set. A fixed value can be entered here if p6903 is not set. This is overwritten as soon as p6903 is enabled.

Dependency: Refer to: p6903

p6871[0...n] VSM offset voltage u2 - u3 / VSM offset u2 - u3

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-100.000 [V]	100.000 [V]	0.000 [V]

Description: Offset voltage between phases L2 and L3 for the Voltage Sensing Module (VSM). The value is determined with the drive switched-off and stationary if p6903 is set. A fixed value can be entered here if p6903 is not set. This is overwritten as soon as p6903 is enabled.

Dependency: Refer to: p6903

p6903[0...n] Voltage actual values, offset mode / U_act_0 offsetMode

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** p0150	**Func. diagram:** -
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	1

Description: Sets the offset mode for voltage actual value sensing.

When the mode is enabled (p6903 = 0), for a pulse inhibit for stator and excitation and zero speed, the offset calibration is automatically started.

Offset calibration is inhibited when the mode is inhibited (p6903 = 1). Values last determined in p3658 and p3659 can be saved. However, they can also be overridden.

Value:
0: Offset calculation enabled
1: Offset calculation inhibited

Dependency: Refer to: p6870, p6871

Note: Offset mode can only be set for actual value sensing functions that are available in the hardware.

r6991[0...4] Recorder settings display / Rec setting displ

B_INF (Recorder), VECTOR_G (Recorder)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the values calculated for the recorder

Index:
[0] = Actual trace number
[1] = Actual trace duration
[2] = Actual pretrigger time
[3] = Actual post trigger time
[4] = Actual number of signals

Dependency: Refer to: p6999

r6992.0...14 CO/BO: Recorder status word / Rec ZSW

B_INF (Recorder), VECTOR_G (Recorder)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8144
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status word of the recorder.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Internal activation	Set	Not set	-
01	External activation	Set	Not set	-
02	Internal trigger	Set	Not set	-
03	External trigger 1.1	Set	Not set	-
04	External trigger 1.2	Set	Not set	-
05	External trigger 1.3	Set	Not set	-

07	External trigger 2.1	Set	Not set	-
08	External trigger 2.2	Set	Not set	-
09	External trigger 2.3	Set	Not set	-
10	Hardware trigger	Set	Not set	-
11	Data buffering running	Yes	No	-
12	Post trigger time running	Yes	No	-
13	Data being stored	Yes	No	-
14	Data buffer full	Yes	No	-

Dependency: Refer to: p6993, p6994, r6997, p6998, p6999

p6993[0...2] Recorder trigger 2 bit mask / Rec trig 2 mask

B_INF (Recorder), VECTOR_G (Recorder)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8144
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0000 hex	FFFF FFFF hex	0001 hex

Description: Sets the bit mask for trigger signal 2 (p6994) of the recorder.

Trigger 2.1 is formed by ANDing the signal source in p6994[0] and the bit mask in p6993[0].

Trigger 2.2 is formed by ANDing the signal source in p6994[1] and the bit mask in p6993[1].

Trigger 2.3 is formed by ANDing the signal source in p6994[2] and the bit mask in p6993[2].

Index:
[0] = Trigger 2.1
[1] = Trigger 2.2
[2] = Trigger 2.3

Dependency: Refer to: p6994

p6994[0...2] CI: Recorder trigger 2 signal source / Rec trig 2 S_src

B_INF (Recorder), VECTOR_G (Recorder)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32 / Integer32	**Dyn. index:** -	**Func. diagram:** 8144
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for trigger 2 of the recorder.
Trigger 2.1 is formed by ANDing the signal source in p6994[0] and the bit mask in p6993[0].
Trigger 2.2 is formed by ANDing the signal source in p6994[1] and the bit mask in p6993[1].
Trigger 2.3 is formed by ANDing the signal source in p6994[2] and the bit mask in p6993[2].

Index:
[0] = Trigger 2.1
[1] = Trigger 2.2
[2] = Trigger 2.3

Dependency: Refer to: p6993

p6996[0...63] Recorder signals / Rec sig

B_INF (Recorder), VECTOR_G (Recorder)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8144
P-Group: Commands	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	996553699	0

Description: Setting to parameterize the signals for the recorder.

r6997 CO: Recorder sequencer state / Rec state

B_INF (Recorder), VECTOR_G (Recorder)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8144
P-Group: Closed-loop control	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	60	-

Description: Displays the state of the sequencer for the recorder.

Value:
0: Not active
10: Active
20: Post trigger time running
30: Prepare data save operation
40: Start data save
50: End data save
60: Configuration

p6998[0...4] BI: Recorder trigger 1 signal sources / Rec trig 1 S_src

B_INF (Recorder), VECTOR_G (Recorder)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 8144
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal sources to activate and trigger the recorder.

Index:
[0] = Activating
[1] = Trigger 1.1
[2] = Trigger 1.2
[3] = Trigger 1.3
[4] = Trigger 1.4

p6999[0...4] Recorder parameterization / Rec par

B_INF (Recorder), VECTOR_G (Recorder)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8144
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2000	[0] 1 [1] 1000 [2] 900 [3] 0 [4] 0

Description: Setting to parameterize the recorder.

The recorder supplies up to 64 internal variables (depending on the parameterization). The maximum recording time is 2000 ms, the variables are acquired in the current controller sampling time – and a pretrigger can be set. The values can then be acyclically written to the memory card. The development and system test departments have the software necessary to decode the content.

Index:
[0] = Enable
[1] = Recording time
[2] = Pre-trigger time
[3] = Output message
[4] = Recording factor

Note: Re index [0]:

Enables or disables the function.

p6999[0] = 0 inhibit the function.

p6999[0] = 1 enable the function. A POWER ON is required after the enable.

Re index [1]:

Sets the recording time, [ms]. The value is discretized with the current controller sampling time.

Re index [2]:

Sets the pretrigger time, [ms]. This time is included in the recording time and cannot be longer than the recording time p6999[1]. The value is discretized with the current controller sampling time.

Re index [3]:

Enables or disables the output of message A49998 when the trigger event is triggered.

Re index [4]:

p6999[4] = n, n = 0 ...4

Recording with the factor, which extends the record time p6999[1] and the pre-trigger time p6999[2] 2^n times, and reduces the number of signals 2^n times.

Example:

p6999[1] = 2000, p6999[2] = 1000, p6999[4] = 4

--> recording time: 2000 ms * 2^4 = 32 s, pre-trigger time:1000 ms * 2^4 = 16 s, number of signals 128/16 = 8.

When setting p6999[4] to 0, the results are as follows:

--> recording time: 2000 ms , pre-trigger time:1000 ms, number signals 128. The maximum number of signals depends on the drive object.

r7000 CO: Par_circuit No. of active power units / Qty active PU

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the active power units for a parallel circuit configuration.

Dependency: Refer to: p7001

p7001[0...n]	Par_circuit power units enable / PU enable		
B_INF (Parallel), VECTOR_G (Parallel)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	1

Description: Enables the power units in the parallel circuit configuration.

Value:
0: Deactivated
1: Activated

Dependency: Refer to: r7000

Note: For motors with separate winding systems (p7003 = 1) it is not possible to inhibit an individual power unit.

p7001 is automatically reset if a power unit is de-activated via p0125 or p0895.

r7002[0...n]	CO: Par_circuit status power units / Status PU		
B_INF (Parallel), VECTOR_G (Parallel)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	-

Description: Display and connector output for the status of the power units in a parallel connection.

Value:
0: Pulses inhibited
1: Pulses enabled

Dependency: Refer to: r7000, p7001

p7003	Par_circuit winding system / Wind_sys		
VECTOR_G (Parallel)	**Can be changed:** C2(2)	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Converter	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	2	0

Description: Specifies the motor winding system when power units are connected in parallel.

Value:
0: One-winding system
1: Several separate winding systems or motors
2: Two separate offset winding systems

Dependency: Re p7003 = 2:

In order to permit separate, offset winding systems, wobbulation must first be deactivated (p1810.2 = 0). The magnitude and direction of the offset is parameterized in p6397.

When exiting commissioning, the circulating current control is automatically deactivated (p7035 = 0), and the compensation of the valve interlocking times is replaced by the appropriate stator resistance adaptation (p1780.7 = 1).

Refer to: p1802, p6397

Note: Re p7003 = 0:

- the motor data identification routine (p1910) determines the stator resistance and the cable resistance. The cable resistance of an individual Motor Module is entered into p0352.

- the current symmetrizing is activated as standard after the motor data identification routine (p7035 = 1).

- individual Motor Modules can be activated and de-activated (p7001).

Re p7003 = 1, 2:

- the motor data identification routine (p1910) determines the total (overall) resistance. The cable resistance is not measured, but instead, entered as a component of the total resistance (refer to p0352).

- all Motor Modules are activated. It is not possible to de-activate a Motor Module.

p7010 Par_circuit current dissymmetry alarm threshold / i_dissym A thresh

VECTOR_G (Parallel)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
2 [%]	100 [%]	20 [%]

Description: Sets the alarm threshold to detect current dissymmetry in the parallel circuit configuration.

The deviation between the measured values and average value is evaluated.

The specified value is referred to the rated power unit current (p7251[0]).

Dependency: Refer to: r7251

p7011 Par_circuit DC link voltage dissymmetry alarm threshold / Vdc_dissym A thrsh

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
2 [%]	100 [%]	10 [%]

Description: Sets the alarm threshold to detect dissymmetry of the DC link voltages in the parallel circuit configuration.

The deviation between the measured values and average value is evaluated.

The specified value is referred to the rated link voltage.

p7015 Par_circuit holding brake power unit data set / Brake PDS

VECTOR_G (Parallel)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 2701, 2814
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	99	99

Description: Sets the power unit data set for a parallel connection via which the holding brake is controlled.

Value:
0: Power unit data set 0
1: Power unit data set 1
2: Power unit data set 2
3: Power unit data set 3
4: Power unit data set 4
5: Power unit data set 5
6: Power unit data set 6
7: Power unit data set 7
99: No holding brake connected

Dependency: Refer to: p0120, p0121

Note: PDS: Power unit Data Set

Example:

3 power units are connected in parallel and the holding brake is connected to power unit 1.

p0120 = 3

p0121[0] = component number of power unit 0

p0121[1] = component number of power unit 1 (with holding brake)

p0121[2] = component number of power unit 2

--> p7015 = 1

r7020[0...n] CO: Par_circuit deviation current in phase U / Phase U curr dev

VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [A]	- [A]	- [A]

Description: Displays the deviation between the measured current actual value of phase U and the average value as peak value.

The maximum deviation from the average value is displayed in r7025.

Dependency: Refer to: r7021, r7022, r7025

r7021[0...n] CO: Par_circuit deviation current in phase V / Phase V curr dev

VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -

Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the maximum absolute deviation of the measured DC link voltage from the average value.

The deviation of the individual voltages from the average value is displayed in r7030.

Dependency: Refer to: r7030

p7035[0...n] Par_circuit circulating current control operating mode / I_cct_ctrl mode

VECTOR_G (Parallel)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	1

Description: Sets the operating mode of the circulating current control.
The circulating current control ensures symmetrical distribution of the total currents to the individual converters.

Value:
0: Circulating current control de-activated
1: Circulating current control activated

Dependency: Circulating current control is not possible for separate, offset motor winding systems (p7003 = 2).

p7036[0...n] Par_circuit circulating current control proportional gain / Circ_I Kp

VECTOR_G (Parallel)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -

	Min	**Max**	**Factory setting**
	0.00000 [ohm]	200.00000 [ohm]	0.00000 [ohm]

Description: Sets the proportional gain for the circulating current controller.
The parameter is pre-set to the cable resistance.

p7037[0...n] Par_circuit circulating current control integral time / I_circ Tn

VECTOR_G (Parallel)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	2.0	1000.0	4.0

Description: Sets the integral time of the circulating current controller.
The parameter is referred to the current controller sampling time (p0115[0]).

Dependency: Refer to: p0115

p7038[0...n] Par_circuit circulating current control limit / I_circ limit

VECTOR_G (Parallel)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Modulation	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1 [%]	100 [%]	50 [%]

Description: Sets the limit of the circulating current controller output values.
The parameter is, depending on the phase, referred to the valve lockout times (p1828, p1829, p1830).

p7040[0...n] Par_circuit correction valve lockout time phase U / Comp t_lockout U

VECTOR_G (Parallel)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1000000.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase U (p1828).

The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.

Dependency: Refer to: p1828

p7042[0...n] Par_circuit correction valve lockout time phase V / Comp t_lockout V

VECTOR_G (Parallel)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1000000.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase V (p1829).

The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.

Dependency: Refer to: p1829

p7044[0...n] Par_circuit correction valve lockout time phase W / Comp t_lockout W

VECTOR_G (Parallel)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Modulation	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1000000.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase W (p1830).

The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.

Dependency: Refer to: p1830

r7050[0...n] Par_circuit circulating current phase U / Circ_I_phase U

VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [A]	- [A]	- [A]

Description: Displays the circulating current of phase U as peak value.

r7051[0...n] Par_circuit circulating current phase V / Circ_I_phase V

VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [A]	- [A]	- [A]

Description: Displays the circulating current of phase V as peak value.

r7052[0...n] Par_circuit circulating current phase W / Circ_I_phase W

VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [A]	- [A]	- [A]

Description: Displays the circulating current of phase W as peak value.

r7100[0...99] Par_circuit ring buffer fault/alarm code / Fault/alarm code

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module).

Displays the fault/alarm code.

Dependency: Refer to: r7101, r7102, r7103

Note: The last fault case that occurred is documented in index 0.

The parameter is reset to 0 at POWER ON.

r7101[0...99] Par_circuit ring buffer data set number / Ring buffer Ds_no

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module).

p7101 < 100:

Displays the Power unit Data Set number (PDS).

p7101 >= 100:

Displays the Voltage Sensing Module Data Set number (VSMDS)

Dependency: Refer to: r7100, r7102, r7103

Note: The last fault case that occurred is documented in index 0.

The parameter is reset to 0 at POWER ON.

r7102[0...99] Par_circuit ring buffer fault/alarm received / F/A received

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module).

Displays the relative system runtime when the fault or alarm occurred.

Dependency: Refer to: r7100, r7101, r7103

Note: The last fault case that occurred is documented in index 0.

The parameter is reset to 0 at POWER ON.

r7103[0...99] Par_circuit ring buffer fault/alarm gone / F/A gone

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module).

Displays the relative system runtime when the fault or alarm was withdrawn.

Dependency: Refer to: r7100, r7101, r7102

Note: The last fault case that occurred is documented in index 0.

The parameter is reset to 0 at POWER ON.

r7200[0...n] Par_circuit power unit overload I2t / PU overload I2t

VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the overload of the particular power unit in a parallel circuit configuration calculated using the I2t function.

The maximum value of all power units is displayed in r0036.

r7201[0...n] CO: Par_circuit power unit temperatures max. inverter / PU temp max inv

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the maximum inverter temperature in the power unit for a parallel circuit configuration.

The maximum value of all power units is displayed in r0037[0].

r7202[0...n] Par_circuit power unit temperatures max. depletion layer / PU TempMaxDepLayer

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the maximum depletion layer temperature in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[1].

r7203[0...n] CO: Par_circuit power unit temperatures max. rectifier / PU temp max rect

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the maximum rectifier temperature in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[2].

r7204[0...n] CO: Par_circuit power unit temperatures air intake / PU temp air intake

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the air intake temperature in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[3].

r7205[0...n] Par_circuit power unit temperatures electronics / PU temp electr

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the temperature of the electronics module in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[4].

r7206[0...n] Par_circuit power unit temperatures inverter 1 / PU temp inv 1

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the inverter temperature 1 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[5].

r7207[0...n] Par_circuit power unit temperatures inverter 2 / PU temp inv 2

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the inverter temperature 2 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[6].

r7208[0...n] Par_circuit power unit temperatures inverter 3 / PU temp inv 3

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the inverter temperature 3 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[7].

r7209[0...n] Par_circuit power unit temperatures inverter 4 / PU temp inv 4

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the inverter temperature 4 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[8].

r7210[0...n] Par_circuit power unit temperatures inverter 5 / PU temp inv 5

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the inverter temperature 5 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[9].

r7211[0...n] Par_circuit power unit temperatures inverter 6 / PU temp inv 6

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the inverter temperature 6 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[10].

r7212[0...n]	Par_circuit power unit temperatures inverter 1 / PU temp rect 1		
B_INF (Parallel), VECTOR_G (Parallel)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°C]	- [°C]	- [°C]

Description: Displays rectifier temperature 1 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[11].

r7213[0...n]	Par_circuit power unit temperatures inverter 2 / PU temp rect 2		
B_INF (Parallel), VECTOR_G (Parallel)	**Can be changed:** -	**Calculated:** -	**Access level:** 3

	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [°C]	- [°C]	- [°C]

Description: Displays depletion layer temperature 3 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[15].

r7217[0...n] Par_circuit power unit temperatures depletion layer 4 / PU temp DepLayer 4

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays depletion layer temperature 4 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[16].

r7218[0...n] Par_circuit power unit temperatures depletion layer 5 / PU temp DepLayer 5

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays depletion layer temperature 5 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[17].

r7219[0...n] Par_circuit power unit temperatures depletion layer 6 / PU temp DepLayer 6

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays depletion layer temperature 6 in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[18].

r7220[0...n] CO: Par_circuit drive output current maximum / Drv I_outp max

VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the maximum output current of the power unit.
The minimum value of all power units multiplied by the number of Motor Modules is displayed in r0067.

r7222[0...n] CO: Par_circuit absolute current actual value / I_act abs val

VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Displays, signals	**Units group:** 6_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays actual absolute current.
The summed value of all power units is displayed in r0068.

r7223[0...n]	**CO: Par_circuit phase current actual value phase U / I_phase U act val**		
VECTOR_G (Parallel)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: Displays the measured actual value of phase U as peak value.
The summed value of all power units is displayed in r0069[0].

r7224[0...n]	**CO: Par_circuit phase current actual value phase V / I_phase V act val**		
VECTOR_G (Parallel)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: Displays the measured actual value of phase V as peak value.
The summed value of all power units is displayed in r0069[1].

r7225[0...n]	**CO: Par_circuit phase current actual value phase W / I_phase W act val**		
VECTOR_G (Parallel)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: Displays the measured actual value of phase W as peak value.
The summed value of all power units is displayed in r0069[2].

r7226[0...n]	**CO: Par_circuit phase current actual value phase U offset / I_phase U offset**		
VECTOR_G (Parallel)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: Displays the measured offset of phase U as peak value.
The summed value of all power units is displayed in r0069[3].

r7227[0...n]	**CO: Par_circuit phase current actual value phase V offset / I_phase V offset**		
VECTOR_G (Parallel)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
	P-Group: Displays, signals	**Units group:** 6_5	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: Displays the measured offset of phase V as peak value.
The summed value of all power units is displayed in r0069[4].

r7228[0...n]	**CO: Par_circuit phase current actual value phase W offset / I_phase W offset**		
VECTOR_G (Parallel)	**Can be changed:** -	**Calculated:** -	**Access level:** 3

r7250[0...4] Par_circuit power unit rated power / PU P_rated

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** 14_6	**Unit selection:** p0100
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kW]	- [kW]	- [kW]

Description: Displays the rated power of the individual power units connected in parallel for various load duty cycles.

The sum of the rated powers of all power units connected in parallel is displayed in r0206.

Index:
[0] = Rated value
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 cont duty cyc
[4] = S6 load duty cycle

Dependency: The value is displayed in [kW] or [hp].

Refer to: p0100, p0205

r7251[0...4] Par_circuit power unit rated current / PU PI_rated

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the rated current of the individual power units connected in parallel for various load duty cycles.

The sum of the rated currents of all power units connected in parallel is displayed in r0207.

Index:
[0] = Rated value
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 cont duty cyc
[4] = S6 load duty cycle

Dependency: Refer to: p0205

r7252[0...4] Par_circuit maximum power unit current / PU I_max

B_INF (Parallel), VECTOR_G (Parallel)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the maximum output current of the individual power units connected in parallel.

The sum of the maximum currents of all power units connected in parallel is displayed in r0209.

Index:
[0] = Rated value
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 cont duty cyc
[4] = S6 load duty cycle

Dependency: Refer to: p0205

r7740[0...n] IGBT power cycling counter valve 1 / IGBT load count 1

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of power cycling counter for valve 1.

For repairs, this parameter serves as internal documentation for service personnel.

The counter state corresponds to the valve wear. A maximum of 650% of the specified service life is displayed. 10000 corresponds to the nominal service life (100%). When this value is reached, the IGBT is theoretically at the end of its service life and must be replaced.

Dependency: Refer to: p7786

Notice: After a valve has been replaced, the corresponding power cycling counter must be reset.

Note: The IGBT power cycling counter can only be set to 0.

Procedure when replacing valve 1:

1. Switch off the system and replace valve 1.

2. Switch on the system and acknowledge that valve 1 has been replaced (p7786.1 = 1).

--> the power cycling counter of valve 1 is reset (r7740 = 0).

3. Carry out a POWER ON (power off/on).

--> as a consequence p7786.1 is automatically set to 0.

r7741[0...n] IGBT power cycling counter valve 2 / IGBT load count 2

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of power cycling counter for valve 2.

For repairs, this parameter serves as internal documentation for service personnel.

The counter state corresponds to the valve wear. A maximum of 650% of the specified service life is displayed. 10000 corresponds to the nominal service life (100%). When this value is reached, the IGBT is theoretically at the end of its service life and must be replaced.

Dependency: Refer to: p7786

Notice: After a valve has been replaced, the corresponding power cycling counter must be reset.

Note: The IGBT power cycling counter can only be set to 0.

Procedure when replacing valve 2:

1. Switch off the system and replace valve 2.
2. Switch on the system and acknowledge that valve 2 has been replaced (p7786.2 = 1).

--> the power cycling counter of valve 2 is reset (r7741 = 0).

3. Carry out a POWER ON (power off/on).

--> as a consequence p7786.2 is automatically set to 0.

r7742[0...n] IGBT power cycling counter valve 3 / IGBT load count 3

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of power cycling counter for valve 3.

For repairs, this parameter serves as internal documentation for service personnel.

The counter state corresponds to the valve wear. A maximum of 650% of the specified service life is displayed. 10000 corresponds to the nominal service life (100%). When this value is reached, the IGBT is theoretically at the end of its service life and must be replaced.

Dependency: Refer to: p7786

Notice: After a valve has been replaced, the corresponding power cycling counter must be reset.

Note: The IGBT power cycling counter can only be set to 0.

Procedure when replacing valve 3:

1. Switch off the system and replace valve 3.
2. Switch on the system and acknowledge that valve 3 has been replaced (p7786.3 = 1).

--> the power cycling counter of valve 3 is reset (r7742 = 0).

3. Carry out a POWER ON (power off/on).

--> as a consequence p7786.3 is automatically set to 0.

r7743[0...n] IGBT power cycling counter valve 4 / IGBT load count 4

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of power cycling counter for valve 4.

For repairs, this parameter serves as internal documentation for service personnel.

The counter state corresponds to the valve wear. A maximum of 650% of the specified service life is displayed. 10000 corresponds to the nominal service life (100%). When this value is reached, the IGBT is theoretically at the end of its service life and must be replaced.

Dependency: Refer to: p7786

Notice: After a valve has been replaced, the corresponding power cycling counter must be reset.

Note: The IGBT power cycling counter can only be set to 0.

Procedure when replacing valve 4:

1. Switch off the system and replace valve 4.
2. Switch on the system and acknowledge that valve 4 has been replaced (p7786.4 = 1).

--> the power cycling counter of valve 4 is reset (r7743 = 0).

3. Carry out a POWER ON (power off/on).

--> as a consequence p7786.4 is automatically set to 0.

r7744[0...n] IGBT power cycling counter valve 5 / IGBT load count 5

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of power cycling counter for valve 5.

For repairs, this parameter serves as internal documentation for service personnel.

The counter state corresponds to the valve wear. A maximum of 650% of the specified service life is displayed. 10000 corresponds to the nominal service life (100%). When this value is reached, the IGBT is theoretically at the end of its service life and must be replaced.

Dependency: Refer to: p7786

Notice: After a valve has been replaced, the corresponding power cycling counter must be reset.

Note: The IGBT power cycling counter can only be set to 0.

Procedure when replacing valve 5:

1. Switch off the system and replace valve 5.
2. Switch on the system and acknowledge that valve 5 has been replaced (p7786.5 = 1).

--> the power cycling counter of valve 5 is reset (r7744 = 0).

3. Carry out a POWER ON (power off/on).

--> as a consequence p7786.5 is automatically set to 0.

r7745[0...n] IGBT power cycling counter valve 6 / IGBT load count 6

B_INF, VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of power cycling counter for valve 6.

For repairs, this parameter serves as internal documentation for service personnel.

The counter state corresponds to the valve wear. A maximum of 650% of the specified service life is displayed. 10000 corresponds to the nominal service life (100%). When this value is reached, the IGBT is theoretically at the end of its service life and must be replaced.

Dependency: Refer to: p7786

Notice: After a valve has been replaced, the corresponding power cycling counter must be reset.

Note: The IGBT power cycling counter can only be set to 0.

Procedure when replacing valve 6:

1. Switch off the system and replace valve 6.
2. Switch on the system and acknowledge that valve 6 has been replaced (p7786.6 = 1).

--> the power cycling counter of valve 6 is reset (r7745 = 0).

3. Carry out a POWER ON (power off/on).
--> as a consequence p7786.6 is automatically set to 0.

r7758[0...19] KHP Control Unit serial number / KHP CU ser_no

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual serial number of the Control Unit.

The individual characters of the serial number are displayed in the ASCII code in the indices.

For the commissioning software, the ASCII characters are displayed uncoded.

Dependency: Refer to: p7765, p7766, p7767, p7768

Notice: An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

Note: KHP: Know-How Protection

p7759[0...19] KHP Control Unit reference serial number / KHP CU ref ser_no

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Sets the reference serial number for the Control Unit.

Using this parameter, if a Control Unit and/or a memory card is replaced at the end customer, the OEM can again adapt the project to the modified hardware.

Dependency: Refer to: p7765, p7766, p7767, p7768

Note: KHP: Know-How Protection

- The OEM may only change this parameter for the use case "Sending encrypted SINAMICS data".

- SINAMICS only evaluates this parameter when powering up from the encrypted "Load into file system..." output or when powering up from the encrypted PS files. The evaluation is only made when know-how protection and memory card copy protection have been activated.

r7760 Write protection/know-how protection status / Wr_prot/KHP stat

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status for the write protection and know-how protection.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Write protection active	Yes	No	-
01	Know-how protection active	Yes	No	-
02	Know-how protection temporarily withdrawn	Yes	No	-
03	Know-how protection cannot be deactivated	Yes	No	-
04	Extended copy protection is active	Yes	No	-
05	Basic copy protection is active	Yes	No	-
06	Trace and measuring functions for diagnostic purposes active	Yes	No	-

Dependency: Refer to: p7761, p7765, p7766, p7767, p7768

Note: KHP: Know-How Protection

Re bit 00:

Write protection can be activated/deactivated via p7761 on the Control Unit.

Re bit 01:

The know-how protection can be activated by entering a password (p7766 ... p7768).

Re bit 02:

If it has already been activated, know-how protection can be temporarily deactivated by entering the valid password in p7766. In this case, bit 1 = 0 and bit 2 = 1 offset.

Re bit 03:

Know-how protection cannot be deactivated, as p7766 is not entered in the OEM exception list (only the factory setting is possible). This bit is only set if know-how protection is active (bit 1 = 1) and p7766 has not been entered in the OEM exception list.

Re bit 04:

When know-how protection has been activated, the contents of the memory card (parameter and DCC data) can be additionally protected against being used with other memory cards/Control Units. This bit is only set if know-how protection is active and p7765 bit 00 is set.

Re bit 05:

When know-how protection has been activated, the contents of the memory card (parameter and DCC data) can be additionally protected against being used with other memory cards. This bit is only set if know-how protection is active and in p7765 bit 01 is set and not bit 00.

Re bit 06:

When know-how protection is activated, the drive data can be traced using the device trace function. This bit is only set if know-how protection is active and in p7765.2 is set.

p7761 Write protection / Write protection

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting for activating/de-activating the write protection for adjustable parameters.

Value:
0: Deactivate write protection
1: Activate write protection

Dependency: Refer to: r7760

Notice: While write protection is active, a download is prevented; however, it is still possible to restore the factory settings.

Note: Parameters with the "WRITE_NO_LOCK" attributes are excluded from the write protection.

A product-specific list of these parameters is also available in the corresponding List Manual.

p7762 Write protection multi-master fieldbus system access behavior / Fieldbus acc_behav

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3

	Min	**Max**	**Factory setting**
	-	-	0000 bin

Description: Configuration settings for know-how protection.

Re bit 00, 01:

When KHP is activated, this means that the OEM can define whether the parameters and DCC data encrypted on the memory card should be protected before using on other memory cards/Control Units.

Re bit 02:

This means that the OEM can define whether it is possible or not to trace the drive data using the device trace function although KHP is activated.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Extended copy protection - linked to the memory card and CU	Yes	No	-
01	Basic copy protection - linked to the memory card	Yes	No	-
02	Permit trace and measuring functions for diagnostic purposes	Yes	No	-

Dependency: Refer to: p7766, p7767, p7768

Note: KHP: Know-How Protection

For copy protection, the serial numbers of the memory card and/or Control Unit are checked.

The memory card copy protection and preventing data to be traced are only effective when the know-how protection has been activated.

Re bit 00, 01:

If both bits are inadvertently set to 1 (e.g. at the BOP), then the setting of bit 0 applies.

There is no copy protection if both bits are set to 0.

p7766[0...29] KHP password input / KHP passw input

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Sets the password for know-how protection.

Example of a password:

123aBc = 49 50 51 97 66 99 dec (ASCII characters)

[0] = character 1 (e.g. 49 dec)

[1] = character 2 (e.g. 50 dec)

...

[5] = character 6 (e.g. 99 dec)

[29] = 0 dec (completes the entry)

Dependency: Refer to: p7767, p7768

Notice: An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

When using the STARTER commissioning software, the password should be entered using the associated dialogs.

The following rules apply when entering the password:

- Password entry must start with p7766[0].
- No gaps are permissible in the password.
- Entering a password is completed when writing to p7766[29] (p7766[29] = 0 for passwords less than 30 characters).

Note: KHP: Know-How Protection

When reading, p7766[0...29] = 42 dec (ASCII character = "*") is displayed.

Parameters with the "KHP_WRITE_NO_LOCK" attribute are not involved in the know-how protection.

Parameters with the "KHP_ACTIVE_READ" attribute can be read even when know-how protection is activated.

A product-specific list of these parameters is also available in the corresponding List Manual.

p7767[0...29] KHP password new / KHP passw new

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Sets the new password for know-how protection.

Dependency: Refer to: p7766, p7768

Note: KHP: Know-How Protection

When reading, p7767[0...29] = 42 dec (ASCII character = "*") is displayed.

p7768[0...29] KHP password confirmation / KHP passw confirm

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Confirms the new password for know-how protection.

Dependency: Refer to: p7766, p7767

Note: KHP: Know-How Protection

When reading, p7768[0...29] = 42 dec (ASCII character = "*") is displayed.

p7769[0...20] KHP memory card reference serial number / KHP mem ref ser_no

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Sets the reference serial number for the memory card.

Using this parameter, if a Control Unit and/or a memory card is replaced at the end customer, the OEM can again adapt the project to the modified hardware.

Dependency: Refer to: p7765, p7766, p7767, p7768

Note: KHP: Know-How Protection

- The OEM may only change this parameter for the use case "Sending encrypted SINAMICS data".
- SINAMICS only evaluates this parameter when powering up from the encrypted "Load into file system..." output or when powering up from the encrypted PS files. The evaluation is only made when know-how protection and memory card copy protection have been activated.

p7770 NVRAM action / NVRAM action

B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Sets the action to be executed for NVRAM data.

At the end of the action the value is automatically set to 0.

Value:
0: Inactive
1: Load NVRAM data to parameters
2: Load parameters to NVRAM
3: Reset

Notice: After action p7770 = 1 no more pulses may be enabled.

After action p7770 = 2, it is essential that parameters are backed up (p0977 = 1) and that a warm restart is then performed (p0009 = 30, p0976 = 2, 3). This will apply the values written.

Note: If value = 1:

This action loads the NVRAM data to the parameters.

If value = 2:

This action loads the parameters to the NVRAM.

If value = 3:

This action sets parameters p7771 ... p7774 to the factory setting.

It is recommended to avoid placing unnecessary load on the subsequent upload/download operation.

p7775 NVRAM data backup/import/delete / NVRAM backup

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: C1, U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	17	0

Description: Setting to backup/import/delete NVRAM data.

NVRAM data are non-volatile data in the device (e.g. fault buffer).

For NVRAM data actions, the following data are excluded:

- Crash diagnostics
- CU operating hours counter
- CU temperature
- Safety logbook

Value:
0: Inactive
1: NVRAM data backup to memory card
2: Import NVRAM data from the memory card
3: Delete NVRAM data in the device
10: Error when clearing
11: Error when backing up, memory card not available
12: Error when backing up, insufficient memory space
13: Error when backing up
14: Error when importing, memory card not available
15: Error when importing, checksum error
16: Error when importing, no NVRAM data available
17: Error when importing

Notice: Re value = 2, 3:

These actions are only possible when pulses are inhibited.

Note: After the action has been successfully completed, the parameter is automatically set to zero.

The actions importing and deleting NVRAM data immediately initiate a warm restart.

If the procedure was not successfully completed, then an appropriate fault value is displayed (p7775 >= 10).

p7786[0...n] Service report / Service report

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 bin

Description: Service parameter to internally document repairs.

After a component has been replaced, this must be confirmed using p7786.x = 0/1.

When acknowledging a replacement, the "Generate report" function is automatically executed.
p7786.x is automatically set to 0 after POWER ON.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Control Interface Module (CIM) replaced	Yes	No	-
01	Valve 1 replaced	Yes	No	-
02	Valve 2 replaced	Yes	No	-
03	Valve 3 replaced	Yes	No	-
04	Valve 4 replaced	Yes	No	-
05	Valve 5 replaced	Yes	No	-
06	Valve 6 replaced	Yes	No	-
15	Generate log	Yes	No	-

Notice: This write process can take several minutes.

Note: The power unit involved can be assigned the correct P index using p0124 (power unit detection via LED).

p7788 Power unit sign-of-life monitoring tolerance window / PU SoL monit tol

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	1000	10

Description: Setting of the tolerance window for the sign of life monitoring for communication to the power unit.

Note: An active window is generated by means of DRIVE-CLiQ telegrams.
If more than one sign-of-life error appears in the window, then A30853 is output.
The lower the value in p7788, the greater the monitoring tolerance.

p7789 Power unit sign-of-life monitoring fault threshold / PU SoL monit F_thr

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1000	1

Description: Sets the number of consecutive sign-of-life errors that are tolerated for communication to the power unit.

Note: F30008 is output in the case of a fault.
The higher the value in the parameter, the higher the monitoring tolerance.

p7790[0...15] Component trace signal / Comp trace sig

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	9	[0] 2 [1] 3 [2] 4 [3] 7 [4] 8 [5] 9 [6] 5 [7] 0 [8] 6 [9] 1 [10...15] 0

Description: Sets the individual signals for the component trace.

For p7790[0...15] = 0, the component trace is deactivated.

Re index 0 ... 7:

The signals are set in p7790[0...7], whose characteristic is to be recorded over time.

If "No signal" is set for a trace channel, then the recording duration of the other time characteristics is increased.

Re index 8 ... 15:

The signals are set in p7790[8...15], whose instantaneous value is to be recorded.

Value:
0: No signal
1: Pulse frequency
2: Phase current U
3: Phase current V
4: Phase current W
5: IGBT chip temperature
6: Heat sink temperature
7: DC link voltage
8: Modulat_depth
9: Angle

Index:
[0] = Trace channel 0
[1] = Trace channel 1
[2] = Trace channel 2
[3] = Trace channel 3
[4] = Trace channel 4
[5] = Trace channel 5
[6] = Trace channel 6
[7] = Trace channel 7
[8] = Trace channel 8
[9] = Trace channel 9
[10] = Trace channel 10
[11] = Trace channel 11
[12] = Trace channel 12
[13] = Trace channel 13
[14] = Trace channel 14
[15] = Trace channel 15

Dependency: Refer to: p7791, p7792

Note: In the operation state, when a trigger event occurs, the trace data of the signals are saved in the component. The oldest trace data are overwritten after more than 5 trigger events.

The trigger event can be set in p7791.

By activating p7792, the trace data of the component is written to files on the non-volatile storage medium (memory card). Experts can then evaluate this data.

p7791 Component trace trigger / Comp trace trigger

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Sets the trigger event for the component trace.

Value:
0: Overcurrent, overvoltage, ground fault, Uce
1: Time-critical message
2: Uce

Dependency: Refer to: p7790, p7792

Note: When the power unit detects an overcurrent condition, then A30001 is output.

When the power unit detects an overvoltage condition in the DC link, then A30002 is output.

When the power unit detects a ground fault, then A30021 is output.

When the power unit detects a Uce fault, then A30022 is output.

p7792 Upload component trace data / Upload comp trace

B_INF, VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to upload and save the trace data of the component trace.

Experts can then evaluate this data.

For p7792 = 1, the trace data of the component is written to files on the memory card in a non-volatile fashion.

The parameter is then automatically set to zero.

Value:
0: Inactive
1: Upload and save active

Dependency: Refer to: p7790, p7791

Notice: Trace files of this component already available on the non-volatile storage medium are overwritten after backup has been activated.

p7820 DRIVE-CLiQ component component number / DQ compo_no

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the component number of the DRIVE-CLiQ component whose parameters are to be accessed.

Dependency: Refer to: p7821, p7822, r7823

p7821 DRIVE-CLiQ component parameter number / DQ para_no

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the parameter number to access a parameter of a DRIVE-CLiQ component.

Dependency: Refer to: p7820, p7822, r7823

p7822 DRIVE-CLiQ component parameter index / DQ para_index

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the parameter index to access a parameter of a DRIVE-CLiQ component.

Dependency: Refer to: p7820, p7821, r7823

r7823 DRIVE-CLiQ component read parameter value / Read DQ value

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the parameter value read from the DRIVE-CLiQ component.

Dependency: Refer to: p7820, p7821, p7822

r7825[0...6] DRIVE-CLiQ component versions / DQ comp version

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the firmware and EEPROM versions of the DRIVE-CLiQ component selected using p7828[1].

Index:
[0] = Reference firmware version
[1] = Actual firmware version
[2] = EEPROM0 version
[3] = EEPROM1 version
[4] = EEPROM2 version
[5] = EEPROM3 version
[6] = EEPROM4 version

Dependency: Refer to: p7828

Note: Re index 0:

Firmware version on the memory card/device memory.

Re index 1:

Actual firmware version of the DRIVE-CLiQ component.

Re index 2 ... 6:

Actual EEPROM version of the DRIVE-CLiQ component.

p7826 Firmware update automatic / FW update auto

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	1

Description: Sets the behavior for the automatic firmware update of the DRIVE-CLiQ components.

Value:
0: Deactivated
1: Upgrade and downgrade
2: Upgrade

Notice: If this parameter is changed, it only becomes effective the next time that the drive system boots.

Note: The firmware is automatically updated when the system boots. The boot can take several minutes.

After the update has been completed, it is necessary to carry out a new POWER ON (power-down/power-up) for the components involved.

The firmware update procedure is displayed as follows:

Control Unit (LED RDY):

Flashes yellow with 0.5 Hz --> firmware is being updated.

Flashing yellow with 2 Hz --> POWER ON is required for the components involved.

Components involved:

Flashing red/green with 0.5 Hz --> firmware is being updated.

Flashing red/green with 2 Hz --> POWER ON of the components is required.

Only components from firmware version 2.5 support the red/green flashing at 2 Hz.

r7827 Firmware update progress display / FW update progress

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the progress when updating the firmware of the DRIVE-CLiQ components.

p7828[0...1] Firmware download component number / FW downl comp_no

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	399	0

Description: Sets the component number for the required DRIVE-CLiQ component.

Index 0:

Component number of the DRIVE-CLiQ component for which a firmware download is to be made.

Index 1:

Component number of the DRIVE-CLiQ component for which the reference firmware version, saved in r7825 on the memory card/device memory, is to be displayed.

Index: [0] = Firmware download
[1] = Reference firmware version

Dependency: Refer to: p0121, p0141, p0151, p7829

Note: For p7828[0] = 399, the firmware for all of the existing components is downloaded.

The firmware download is started with p7829 = 1.

p7829 Activate firmware download / FW download act

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1	999	0

Description: Activating the firmware download for the DRIVE-CLiQ components specified in p7828.

1: Activate download.

-1: activate the download and carry out a reset.

0: Download successfully completed.

> 1: Fault code

011: DRIVE-CLiQ component has detected a checksum error.

015: The selected DRIVE-CLiQ components did not accept the contents of the firmware file.

018: Firmware version is too old and is not accepted by the component.

019: Firmware version is not suitable for the hardware release of the component.

101: After several communication attempts, no response from the DRIVE-CLiQ component.

140: Firmware file for the DRIVE-CLiQ component not available on the memory card/device memory.

143: Component has not changed to the mode for firmware download. It was not possible to delete the existing firmware.

144: When checking the firmware that was downloaded (checksum), the component detected a fault. It is possible that the file on the memory card/device memory is defective.

145: Checking the loaded firmware (checksum) was not completed by the component in the appropriate time.

156: Component with the specified component number is not available.

Additional values:

Only for internal Siemens troubleshooting.

Dependency: Refer to: p7828

Note: p7829 is automatically set to 0 after the firmware has been successfully downloaded.

The new firmware only becomes active at the next system run-up.

p7830 Telegram diagnostics selection / Telegr diag sel

ENC, VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Selects a telegram whose contents should be shown in r7831 ... r7836.

Value:
0: Reserved
1: First cyclic receive telegram sensor 1
2: First cyclic receive telegram sensor 2
3: First cyclic receive telegram sensor 3

Dependency: Refer to: r7831, r7832, r7833, r7834, r7835, r7836

r7843[0...20] Memory card serial number / Mem_card ser.no

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual serial number of the memory card.
The individual characters of the serial number are displayed in the ASCII code in the indices.

Dependency: Refer to: p9920, p9921

Notice: An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

Note: Example: displaying the serial number for a memory card:
r7843[0] = 49 dec --> ASCII characters = "1" --> serial number, character 1
r7843[1] = 49 dec --> ASCII characters = "1" --> serial number, character 2
r7843[2] = 49 dec --> ASCII characters = "1" --> serial number, character 3
r7843[3] = 57 dec --> ASCII characters = "9" --> serial number, character 4
r7843[4] = 50 dec --> ASCII characters = "2" --> serial number, character 5
r7843[5] = 51 dec --> ASCII characters = "3" --> serial number, character 6
r7843[6] = 69 dec --> ASCII characters = "E" --> serial number, character 7
r7843[7] = 0 dec --> ASCII characters = " " --> serial number, character 8
...
r7843[19] = 0 dec --> ASCII characters = " " --> serial number, character 20
r7843[20] = 0 dec
Serial number = 111923E

r7844[0...2] Memory card/device memory firmware version / Mem_crd/dev_mem FW

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the version of the firmware stored on the memory medium of the drive device.
Depending on the drive device being used, the memory medium is a memory card, or an internal non-volatile device memory.

Index: [0] = Internal
[1] = External
[2] = Parameter backup

Note: Re index 0:
Displays the internal firmware version (e.g. 04402315).
This firmware version is the version of the memory card/device memory and not the CU firmware (r0018), however, normally they have the same versions.
Re index 1:
Displays the external firmware version (e.g. 04040000 -> 4.4).
For automation systems with SINAMICS Integrated this is the runtime version of the automation system.
Re index 2:
Displays the internal firmware version of the parameter backup.
With this CU firmware version, the parameter backup was saved, which was used when powering up.

r7850[0...n] Drive object operational/not operational / DO ready for oper

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-32786	32767	-

Description: Displays whether, for an activated drive object, all activated topology components are available or not (or whether these can be addressed).
0: Drive object not ready for operation
1: Drive object ready for operation

p7852 Number of indices for r7853 / Qty indices r7853

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	200	1

Description: Displays the number of indices for r7853[0...n].
This corresponds to the number of DRIVE-CLiQ components that are in the target topology.

Dependency: Refer to: r7853

Note: The values are valid if all available Control Units adopt the "Initialization finished" state (r3988 = 800) following power-up.

r7853[0...n] Component available/not available / Comp present

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** p7852	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0000 hex	FFFF hex	-

Description: Displays the component and whether this component is currently present.
High byte: Component number
Low byte: 0/1 (not available/available)

Dependency: Refer to: p7852

Note: The values are valid if all available Control Units adopt the "Initialization finished" state (r3988 = 800) following power-up.

p7857	Sub-boot mode / Sub-boot mode		
B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	1

Description: Sets the mode for the sub-boot.

Value:
0: Sub-boot manual
1: Sub-boot automatic

Note: For p7857 = 0 (manual sub-boot) the following applies:
The parameter should be set to 1 to start the sub-boot.

p7859[0...199]	Component number global / Comp_no global		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	-32786	32767	0

Description: Sets the global and unique component number in a drive system with several Control Units.
Each index of the parameter corresponds to a possible local component number on the corresponding Control Unit.
The indices are allocated to the global component numbers as follows:
p7859[0]: Not used
p7859[1]: Sets the global component number for the local component number 1
p7859[2]: Sets the global component number for the local component number 2
...
p7859[199]: Sets the global component number for the local component number 199

Notice: This parameter is preferably set via suitable commissioning software (e.g. UpdateAgent, STARTER, SCOUT).
Changing the parameter via the AOP (Advanced Operator Panel) or BOP (Basic Operator Panel) can destroy a valid unique setting.

Note: The parameter is not influenced by setting the factory setting.

r7867	Status/configuration changes global / Changes global		
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Units group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays status and configuration changes of all of the drive objects in the complete unit.
When changing the status or the configuration of the Control Unit or a drive object, the value of this parameter is incremented.

Dependency: Refer to: r7868, r7869, r7870

r7868[0...24] **Configuration changes drive object reference / Config_chng DO ref**

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Reference to the drive objects whose configuration has changed.

Index 0:

When changing one of the following indices, then the value in this index is increased.

Index 1...n:

The drive object with object number in p0101[n-1] has changed its configuration.

Example:

r7868[3] was incremented since the last time it was read.

--> the configuration of the drive object with object number in p0101[2] was changed.

Index:
[0] = Sum of the following indices
[1] = Object number in p0101[0]
[2] = Object number in p0101[1]
[3] = Object number in p0101[2]

[24] = Object number in p0101[23]

Dependency: Refer to: p0101, r7867, r7872

r7870[0...7] Configuration changes global / Config_chng global

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Units group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the configuration changes of all of the drive objects in the complete unit.

Index: [0] = Sum of the following indices
[1] = r7871[0] of a drive object
[2] = p0101 or r0102
[3] = PROFIBUS configuration (p0978)
[4] = DRIVE-CLiQ actual topology (r9900 or r9901)
[5] = DRIVE-CLiQ target topology (r9902 or r9903)
[6] = DRIVE-CLiQ sockets (p0109)
[7] = OA applications

Dependency: Refer to: r7867, r7871

Note: Re index 0:

When changing one of the following indices, then the value in this index is incremented.

Re index 1:

Drive object configuration. When changing r7871[0] on a drive object, the value in this index is incremented.

Re index 2:

Drive object, configuration unit. When changing either p0101 or r0102, the value in this index is incremented.

Re index 3:

PROFIBUS configuration unit. When changing p0978, the value in this index is incremented.

Re index 4:

DRIVE-CLiQ actual topology. When changing either r9900 or r9901, the value in this index is incremented.

Re index 5:

DRIVE-CLiQ target topology. When changing either p9902 or p9903, the value in this index is incremented.

Re index 6:

DRIVE-CLiQ sockets. When changing p0109, the value in this index is incremented.

Re index 7:

OA applications. When changing OA applications, the value in this index is incremented.

r7871[0...15] Configuration changes drive object / Config_chng DO

B_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the configuration changes on the drive object.

Index:
[0] = Sum of the following indices
[1] = p0010, p0107, p0108
[2] = Drive object name (p0199)
[3] = Structure-relevant parameters (e.g. p0180)
[4] = BICO interconnections
[5] = Activate/de-activate drive object
[6] = Data backup required
[7] = Activate/de-activate component
[8] = Reference or changeover parameters (e.g. p2000)
[9] = Parameter count through Drive Control Chart (DCC)
[10] = p0107, p0108
[11] = Reserved
[12] = Write protection and know-how protection status
[13] = Reserved
[14] = Reserved
[15] = Reserved

Dependency: Refer to: r7868, r7870

Note: Re index 0:

When changing one of the following indices, then the value in this index is incremented.

Re index 1:

Drive object commissioning: When changing p0010, p0107, p0108, p0171, p0172 or p0173, the value in this index is incremented.

Re index 2:

Drive object name. When changing p0199, the value in this index is incremented.

Re index 3:

Drive object structure. When changing a parameter that is relevant for the structure (e.g. number of data sets), the value in this index is incremented.

Re index 4:

Drive object BICO interconnections. When changing r3977, the value in this index is incremented.

Re index 5:

Drive object activity: When changing p0105, the value in this index is incremented.

Re index 6:

Drive object, data save.

0: There are no parameter changes to save.

1: There are parameter changes to save.

Re index 7:

Drive object component activity: When changing either p0125 or p0145, the value in this index is incremented.

Re index 8:

Drive object changeover of units. When changing reference or changeover parameters (e.g. p2000, p0304), the value in this index is incremented.

Re index 9:

Drive object parameter count. When changing the number of parameters by loading Drive Control Chart (DCC), the value in this index is incremented.

Re index 10:

Drive object configuration. When changing p0107, p0108, p0171, p0172 or p0173, the value in this index is incremented.

r7871[0...15] **Configuration changes drive object / Config_chng DO**

CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN

Can be changed: -	**Calculated:** -	**Access level:** 4
